EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 Following a reactor scram, it was discovered that SRM B was indicating downscale. At
03 the time of this discovery, SRM C had already been declared inoperable on October 30,
04 1981, when it failed the functional test as outlined in PT-1.10. The two remaining
05 SRMs were operable. This event did not affect the health and safety of the public.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 SRM B, Model No. 1123144G007, downscale indications are attributed to a failed
11 monitor probe. A Work Request and Authorization to replace the detector during the up-
12 coming refueling outage has been written. The SRM C pulse height discriminator ad-
13 justment was out of specified tolerance. The pulse height discriminator was adjusted
14 to function within specified tolerances and SRM C, Model No. 194X365G1, was returned to service.
