EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 While in mode 1, the chiller package for Train B of control room Ventilation
03 System (VC) tripped due to high bearing temperature and was declared inoperable.
04 A similar incident occurred on Train A on 10/12/82. These incidents violate
05 T.S.3.7.6 and are reportable pursuant to T.S.6.9.1.13(b). Because of the
06 availability of a redundant train, health and safety of the public were
07 unaffected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 The bearing temperature was high due to excess oil in the chiller (oil heats
11 because compressor's transmission operates in the oil when reservoir is over
12 filled). A procedural deficiency could have led to excess oil being placed in
13 the chiller package. The excess oil was removed from the chiller packages while
14 the bearings cooled, and the trains were declared operable on the same days they
failed. Operations procedures will be revised.
