APPLICANT: Gulf States Utilities Company (GSU)

FACILITY: River Bend Station (RBS)

SUBJECT: SUMMARY OF MEETING TO DISCUSS MODIFICATIONS TO SUPPORTING SYSTEMS FOR THE HIGH PRESSURE CORE SPRAY (HPCS) DIESEL GENERATION

The meeting was held October 30, 1984 in Bethesda Maryland. A list of persons participating in the meeting is included in Enclosure 1.

As a result of discussions during the review of the operating license application for RBS by the Advisory Committee on Reactor Safeguards (ACRS), GSU has proposed a modification to the power supplies to a service water pump which provides cooling water to the HPCS diesel generator. The ACRS recommended:

> "The dedicated diesel generator that drives the high pressure core spray pump currently depends on cooling water supplied by pumps powered by the other two diesel generators during loss of offsite power conditions. We recommend that the merit of removing this dependency be examined."

GSU has proposed to modify the power supply the "C" standby service water pump to power it from electrical division III (i.e. the HPCS diesel generator). The staff listened to the proposal by GSU to modify this power supply and conceptually found the modification to be satisfactory. However, the staff will conduct an in-depth review following the submittal by GSU of the modified drawings. GSU intends to submit this proposed modification for staff approval in the near future.
