

Briefing on the Progress of the Task Force Review of NRC Processes and Regulations Following the Events in Japan

Bill Borchardt
Executive Director for Operations
June 15, 2011

Agenda

Actions to Date
 Martin Virgilio

Task Force Activities
 Dr. Charles Miller

Actions to Date

- Results of Temporary Instructions (TIs)
- Bulletin 2011-01, "Mitigating Strategies"
- Continued international interactions

Task Force Activities 60-Day Update

Dr. Charles L. Miller, Lead NRC Task Force

Task Force Actions Since Last Meeting

- Continued task force discussions with NRC staff on technical topics
- Site visits
- Developing background and evaluation of focus areas
- Reviewing results of TIs
- Reviewing input from various stakeholders

Areas of Focus

- Using defense-in-depth approach
 - Protection from natural phenomena
 - Mitigation for long-term station blackout (SBO)
 - Emergency preparedness (EP)
- NRC programs

Themes

- Protection of equipment from the appropriate external hazards is a key foundation of safety
- Mitigation equipment and strategies that prevent core or spent fuel damage provide additional defense-in-depth

Themes (Cont'd)

- EP provides further defense-indepth by minimizing public dose should radiological releases occur
- Principles of Good Regulation promote a consistent, coherent, and reliable regulatory framework

Protecting Safety Equipment From Natural Phenomena

- Protection of equipment from the appropriate external hazards is a key foundation of safety
- Rules and guidance have evolved
 - State of knowledge of hazards
 - State of the art of analysis methods

Protection From Natural Phenomena (Cont'd)

- Plants have different licensing bases and associated safety margins
- Regulatory initiatives to address vulnerabilities
 - Plant specific actions have enhanced margins without necessarily changing the design basis external hazards

Mitigating Long-Term Station Blackout

- Mitigation equipment and strategies that prevent core or spent fuel damage provide additional defense-in-depth
- Long-term SBO
 - Requires multiple concurrent equipment failures
 - Can result from beyond design basis external events

Coping with SBO

- Current requirements do not address common cause failure of all onsite and offsite AC power sources and distribution
- Current coping requirement assumes near-term restoration of AC power

10 CFR 50.54(hh)(2)

- 10 CFR 50.54(hh)(2) requires mitigation capability for large fires and explosions
- Capability could be useful for other events such as long-term SBO, if available

Availability of 10 CFR 50.54(hh)(2) Equipment

- NRC inspections revealed deficiencies in:
 - Maintenance/availability of equipment
 - Procedures
 - Training
- Equipment may not be protected for other initiating events

Severe Accident Management Guidelines (SAMGs)

- SAMGs address plant response during a severe accident to:
 - Terminate core damage progression
 - Maintain containment integrity
 - Minimize radioactive releases
- Spent fuel cooling not included
- SAMGs were implemented as a voluntary initiative in the 1990s

Status of SAMGs

- NRC inspection:
 - Confirmed that every site has SAMGs
 - Revealed inconsistent implementation
 - Procedure availability and control
 - Plant configuration control
 - Training and exercises

Hardened Vents

- Provided to protect BWR Mark I containments from overpressure during a severe accident
- Implemented at all Mark I plants following Generic Letter 89-16
- Not included in regulations
- Plant-specific designs varied

Emergency Preparedness

- EP provides further defense-indepth by minimizing public dose should radiological releases occur
- Existing EP requirements focus on single-unit events
 - Staffing, facilities, equipment, dose projection capability

Emergency Preparedness (Cont'd)

- Challenges during long-term SBO
 - Emergency notification
 - Communication
 - Data transmission
- Public and decision maker knowledge of radiation safety principles

NRC Programs

- Principles of Good Regulation promote a consistent, coherent, and reliable regulatory framework
- Past agency decisions for beyond design basis events have led to variability in licensee and NRC programs

NRC Programs (Cont'd)

- Regulatory analysis guidelines do not provide sufficient clarity for balancing cost/benefit and defense-in-depth considerations
- Voluntary initiatives have limited regulatory treatment

Next Steps

- Near-term task force will recommend actions and topics for longer-term review
- Task force report will be provided to Commission in July in a notation vote paper
- July 19, 2011 Commission meeting

Longer-Term Review Approach

- Longer-term task force to be chartered
- Will address areas identified by near-term task force
- Applicability of lessons to other licensed facilities
- Engage internal and external stakeholders

Acronym List

- AC Alternating Current
- BWR Boiling Water Reactor
- EP Emergency Preparedness
- NRC Nuclear Regulatory Commission

Acronym List (Cont'd)

- SAMG Severe Accident Management Guideline
- SBO Station Blackout
- TI Temporary Instruction
