NRC STAFF TO HOLD PUBLIC MEETING TO DISCUSS INSPECTION OF FORT CALHOUN PLANT'S LICENSE RENEWAL PROGRAMS

Officials of the U.S. Nuclear Regulatory Commission will meet with Omaha Public Power District management at 9:00 a.m. (CST) Friday, November 8, at the plant's Training Auditorium, located on Highway 75 north of Fort Calhoun, Nebraska, to present the results of the NRC's first region-based inspection of the license renewal programs for the Fort Calhoun nuclear plant.

The meeting is between the NRC and Omaha Public Power District but is open to observation by interested members of the public. NRC officials will also be available prior to its conclusion to answer any questions observers may have.

Omaha Public Power District filed an application to renew the operating license of the Fort Calhoun plant in January 2002. If the NRC approves the plant's application, it would renew the license for an additional 20 years, moving the license expiration date from 2013 to 2033.
