Subject: **COLUMBIA GENERATING STATION, DOCKET NO. 50-397
INDEPENDENT SPENT FUEL STORAGE INSTALLATION,
DOCKET NO. 72-35
2007 ANNUAL RADIOACTIVE EFFLUENT RELEASE REPORT**

Dear Sir or Madam:

In accordance with 10 CFR 50.36a(a)(2), 10 CFR 72.44(d)(3), ISFSI Technical Specification 5.4.c, and Columbia's Technical Specification 5.6.2, the Annual Radioactive Effluent Release Report is hereby submitted as an enclosure to this letter. As required by the Columbia's Technical Specifications, the report includes a summary of the quantities of radioactive liquid, gaseous, and solid waste released from Columbia Generating Station during the reporting period.

No changes were made to Columbia Generating Station's Offsite Dose Calculation Manual (ODCM) in this reporting period.

There are no commitments being made to the NRC by this letter.

Respectfully,

DK Atkinson, Vice President
Nuclear Generation & Chief Nuclear Officer

1.0 Introduction

This report has been prepared in compliance with 10 CFR 50.36a(a)(2), 10 CFR 72.44(d)(3), Independent Spent Fuel Storage Installation (ISFSI) Technical Specification 5.4.c, and Columbia Generating Station Technical Specification 5.6.2. It includes a summary of the quantities of radioactive liquid and gaseous effluents and solid radwaste released from Columbia Generating Station during calendar year 2007. Effluent data is summarized on a quarterly basis.

2.0 Liquid Effluents

No planned releases of contaminated liquids from the liquid radwaste processing system were discharged to the Columbia River from Columbia Generating Station during calendar year 2007. The last planned discharge took place in 1998.

3.0 Gaseous Effluents

The gaseous radwaste effluents from Columbia Generating Station were released from three (3) release points:

- Main Plant Vent -- mixed mode release
- Turbine Building -- ground level release
- Radwaste Building -- ground level release

The gaseous source terms from each release point are listed in Tables 3-1, 3-2, and 3-3. The activation gas argon-41 is included in these tables under fission gases to allow a match with the fission and activation gas totals of Table 3-4. Table 3-4 provides a summation of the total activity released, the average release rate, gross alpha radioactivity, and the estimated total error associated with the measurements of radioactivity in the gaseous effluents.

Radioactivity measurements for gaseous effluent releases are performed for fission and activation gases by collecting the samples in a Marinelli beaker and analyzing them using gamma spectroscopy. Air is analyzed for tritium by collection of water vapor on a desiccant with subsequent distillation and liquid scintillation counting. Particulates and iodines are sampled continuously and the sample media (particulate filters and charcoal cartridges) are analyzed weekly using gamma spectroscopy. Each quarter a chemical separation process is used to isolate strontium from the composite particulate filters and quantification is accomplished with liquid scintillation detection. The average energy per disintegration of fission and activation gases is not included in this report as it is not required by Technical Specifications and is not used for gaseous effluent release rate limit calculations.

When a radioisotope is not positively identified at levels greater than the Minimum Detectable Activity (MDA), a value of zero is used for release concentrations and offsite dose assessments. Table 3-6 contains the Lower Limit of Detection (LLD) values corresponding to the sampling methods and analytical instruments used for each principal radioisotope.

Dose calculations were performed for releases using the NRC GASPAR II computer program and parameters as defined in the Offsite Dose Calculation Manual (ODCM). Desert sigmas were not used in gaseous plume growth calculations. Throughout this report, the term 'dose' is used as defined in NRC Regulatory Guide 1.109-1977. Quarterly and annual doses to the potentially highest-exposed member of the public at and beyond the site boundary were calculated. In addition, quarterly and annual doses were calculated at locations identified in the annual land use census. ODCM limits are based on Part 20 and Appendix I to Part 50 of Title 10 of the Code of Federal Regulations. The threshold for air dose applies to fission and activation gases and is ten (10) millirad for beta and five (5) millirad for gamma quarterly and twenty (20) millirad for beta and ten (10) millirad for gamma annually. The threshold for organ dose applies to iodine, tritium, and particulates with half-lives greater than eight days and is seven and a half (7.5) millirem quarterly and fifteen (15) millirem annually. For fission and activation gases the dose rate limits are less than or equal to 500 mrem per year to the whole body and less than or equal to 3000 mrem per year to the skin. For iodines, particulates, and tritium the dose rate limit is less than or equal to 1500 mrem/year to any organ.

Dose calculations were also conducted for members of the public within the site boundary. The results are discussed and tabulated in Section 6.0.

The Kootenai building is located approximately 0.75 miles from the Reactor building. Within this building are the Emergency Operations Facility (EOF) and a backup chemistry laboratory. The release path for the radiochemical hood within the backup laboratory contains a HEPA filter and is monitored for radioactive releases even though no radiochemical work is routinely performed in this laboratory. During 2005, the laboratory liquid release path was physically blocked and the liquid release monitor deactivated. No evidence of gaseous or liquid release of licensed radioactive material was noted in 2007.

It is estimated that approximately 1.61E-02 Curies of tritium were released through unmonitored vents of the heating steam system within and outside the main power block (Turbine, Radwaste, Reactor, and General Services buildings).

A total of fifteen loaded spent fuel storage containers (SFSC) were in place in the ISFSI facility at the end of 2004 and no additional SFSCs have been added as of December 31, 2007. The SFSCs are performing as designed; consequently, there are no effluents from this facility.

There were no abnormal releases of gaseous effluent from the main power block during this reporting period.

The following summarizes an incident of effluent monitor inoperability.

During the 2007 refueling outage, the reactor building low range stack monitor was taken out of service for a period of 39 days due to planned corrective action to replace the helium compressor unit. The detector is a hyper-pure germanium semiconductor, unique in the United States for real-time radionuclide monitoring prior to discharge at release points. Compensatory measures (grab samples) were taken as required by the Offsite

Dose Calculation Manual. Gaseous waste streams are monitored prior to entry into the stack and the stack is also monitored by an intermediate and high range detector.

Gaseous Effluent Tables

Table 3-0 10 CFR Part 50 Appendix I Dose Compliance

Report Period: January -- December 2007

1st Quarter	Quarter	3rd Quarter	4th Quarter	Year*
-------------	---------	-------------	-------------	-------

Noble Gas

Gamma Air Dose (mrad)	1.43E-03	1.49E-03	2.92E-03	3.01E-03	6.55E-03
	5	5	5	5	10
	2.86E-02	2.98E-02	5.84E-02	6.02E-02	6.55E-02
Beta Air Dose (mrad)	5.03E-04	5.27E-04	1.15E-03	1.06E-03	2.42E-03
	10	10	10	10	20
	5.03E-03	5.27E-03	1.15E-02	1.06E-02	1.21E-02

Iodine-131, Iodine-133, Tritium, and Particulates with half-lives greater than eight days.

Organ Dose (mrem)	8.21E-03	5.73E-03	6.32E-03	6.80E-03	2.40E-02
	7.5	7.5	7.5	7.5	15
	1.10E-01	7.64E-02	8.43E-02	9.07E-02	1.60E-01

* Calculated quarterly doses cannot be directly compared to the annual doses. Each above listed quarterly dose is the highest calculated dose based on a number of variables. Variables that make comparison difficult include location, meteorological data (quarterly joint frequency distribution (JFD) tables vs. annual JFD tables), receptor age, target organ, and characteristics of the emitted radionuclides.

Total release (Ci)	1.55E+01	8.14E+00	1.14E+01	9.78E+00	4.48E+01	2.50E+01
Average release rate ($\mu\text{Ci/s}$)	2.00E+00	1.04E+00	1.43E+00	1.23E+00	1.42E+00	
Percent of ODCM limit (%)	1.76E-03	6.21E-04	9.74E-04	1.30E-03	1.04E-03	

MDA = Less than the "a posteriori" minimal detectable activity (microcuries per unit mass or volume).

ODCM release rate limits are based on dose rate. For fission and activation gases the dose rate limits are less than or equal to 500 mrem/year to the whole body and less than or equal to 3000 mrem/year to the skin. For all periods the dose rate to the whole body was higher than that to the skin and therefore, the Percent of ODCM limit is calculated for the whole body limit. For I-131, particulates, and tritium the dose rate limit is less than or equal to 1500 mrem/year to any organ. The ODCM dose factors and the highest site boundary dispersion value for each period were used in the calculation.

* Measurement errors are sample-specific. The values reported represent an approximate overall error. The major contributors of this error are measurements associated with sample volume and release point flow rates and estimates of plateout factors.

Table 3-5 Gaseous Purges and Vents

Report Period: January -- December 2007

Type	Number	Total Time (hr.)	Maximum Time (hr.)	Minimum Time (hr.)	Mean Time (hr.)
Purge	2.00E+00	8.85E+01	6.08E+01	2.77E+01	4.42E+01
Vent	3.20E+01	3.34E+01	3.75E+00	1.83E-01	1.04E+00

Columbia Generating Station is a continuous release plant. All purges and vents are discharged through the Standby Gas Treatment System and released through the reactor building stack that is sampled and continuously monitored for radioactive gaseous waste.

5.0 Meteorological Data

The meteorological data contained in Tables 5-1 through 5-10 was obtained from the meteorological tower located 2500 feet (762 m) west of Columbia Generating Station. Data was recovered from instruments at the 33-foot (10 m) and 245-foot (75 m) levels. The meteorological data is a composite file generated from the automated data recovery systems for the calendar year 2007. Data is archived on the Energy Northwest Local Area Network.

Joint data recovery for 2007 was 96.1% from the 33-foot level and 96.6% from the 245-foot level. Redundant wind and temperature sensors are installed at both levels of the meteorological tower. These redundant sensors are labeled System 'A' and System 'B'. For the 33-foot level, the joint frequency distribution was calculated using the System 'B' sensors except for May, June, and September when the System 'A' sensors were used. For the 245-foot level, the joint frequency distribution was calculated using the System 'B' sensors for April, July, August, November, and December. For the remainder of the year, the system 'A' sensors were used.

The data in Tables 5-1 through 5-8 lists the joint frequency distributions at the 33-foot and 245-foot levels by quarter for 2007. These tables show the total hours at various wind speeds for each sector and stability class. The NRC stability classes A through G and eleven wind speed categories along with the 16 wind direction sectors were used to prepare each joint frequency table. Table 5-9 and 5-10 list the annual joint frequency distributions for those levels for 2007.

Data below 1.00 MPH is recorded as a calm.

Joint Frequency Distribution Tables for 2007

Table 5-1 1st Quarter Average, 33 Ft Above Ground Level (AGL)

Joint Frequency Distribution (version 4.0)																	
Sensor Criteria		Time Frame								Data Recovery Rate							
Wind Speed: 33 Foot Sensors								Starting Date: 1/1/07								Maximum Hours In Period: 2160	
Wind Direction: 33 Foot Sensors								Ending Date: 3/31/07								Hours Missing: 11	
Delta T: 245 Foot - 33 Foot Sensors								Hours Used: 2149								Recovery Rate: 99.5%

6.0 DOSE ASSESSMENT -- IMPACT ON MAN

Liquid Effluents - There were no liquid discharges from the radwaste processing system to the Columbia River during calendar year 2007.

Gaseous Effluents - The NRC GASPAR II computer code was used to calculate doses at and beyond the site boundary using quarterly and annual meteorological data and site-specific variables as required and defined in the ODCM. Table 6-1 shows the highest calculated doses at the site boundary and beyond the site boundary. Table 6-1 also shows the quarterly and annual dose for the nearest and highest exposed resident identified in the land use census. Table 6-2 lists the annual 50-mile dose using values obtained from the ALARA annual integrated population dose summary (person-rem). Table 6-2 also provides the annual individual doses associated with each pathway. These values were obtained by dividing the ALARA integrated dose (person-rem) by the estimated year 2000 50-mile population (356,993) and converting to mrem.

The highest calculated dose to a child living at locations identified in the most recent land use census was 2.48E-03 mrem to the total body, 2.49E-03 mrem to the thyroid, and 3.58E-03 mrem to the skin. This location was at 4.01 miles in the ENE sector.

Periodically, Columbia Generating Station offers public tours of selected locations within the site boundary. Calculations assumed an eight (8) hour per year exposure to the plume, ground shine, and inhalation pathways. The organ with the highest dose was the skin. The dose assessment results for this group are tabulated below.

During 2007, members of the public worked at the WNP-1 and WNP-4 industrial areas. The maximum dose to these individuals was also calculated assuming 2000 hours per year exposure to the plume, inhalation, and ground deposition pathways at WNP-1 and at WNP-4. The maximum doses received by the adult age group (full-time employees) are shown below.

The following table shows dose to members of the public from gaseous effluents within the site boundary of Columbia Generating Station for the total indicated hours spent at each location.

Location	Hours Spent	Total Body Dose (mrem)	Thyroid Dose (mrem)	Highest Other Organ Dose (mrem)	Beta Air Dose (mrad)	Gamma Air Dose (mrad)
Tour Visitors	8.00E+00	5.44E-04	5.46E-04	5.88E-04	5.54E-06	1.51E-05
WNP-4 Whse.2-4	2.00E+03	3.12E-05	3.13E-05	3.47E-05	4.79E-04	1.32E-03
WNP-1 Bldg 121	2.00E+03	5.10E-03	5.10E-03	5.71E-03	7.05E-04	1.94E-03

There was no measurable direct radiation contribution from Columbia Generating Station to the tour visitors or to the workers at the WNP-1 or WNP-4 industrial areas.

During the growing season, Columbia Generating Station conducts a five-mile land use census to determine the locations of nearest residents, gardens, and farm animals out to five miles in each sector. No change to land usage was found.

The following table provides the results of annual dose calculations for the highest dose age group for each identified land use census location from gaseous effluents.

Location	Total Body Dose (mrem)	Thyroid Dose (mrem)	Highest Other Organ Dose (mrem)	Beta Air Dose (mrads)	Gamma Air Dose (mrads)	Age Group
Resident (4.47 miles NE)	9.28E-04	9.30E-04	1.08E-03	1.25E-04	3.30E-04	Teen
Resident (4.01 miles ENE)	2.61E-03	2.62E-03	3.71E-03	9.92E-04	2.45E-03	Adult
Resident (4.59 miles E)	1.77E-03	1.78E-03	2.59E-03	7.38E-04	1.84E-03	Teen
Resident (4.24 miles ESE)	2.12E-03	2.13E-03	2.93E-03	7.36E-04	1.69E-03	Teen

The highest 'Other Organ' in all cases was the skin.

For environmental TLD stations at or beyond the site boundary where preoperational (background) data was acquired, no increase in ambient exposure was observed in 2007 from the preoperational values.

Dose Tables

Table 6-1 Summary of Doses from Gaseous Effluents

1. Maximum Air Dose at the Site Boundary (1.2 miles)

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta air dose (mrad)	5.03E-04	5.27E-04	1.15E-03	5.27E-04	2.42E-03
Gamma air dose (mrad)	1.43E-03	1.49E-03	2.92E-03	1.49E-03	6.55E-03

2. Maximum Air Dose Beyond the Site Boundary

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta air dose (mrad)	2.45E-04	1.10E-04	4.53E-04	1.06E-03	9.92E-04
Gamma air dose (mrad)	6.96E-04	3.12E-04	1.03E-03	3.01E-03	2.45E-03

3. Maximum Annual Dose at the Site Boundary

	Annual Dose
Annual total body dose (mrem)	2.19E-02
Annual skin dose (mrem)	2.40E-02

4. Maximum Annual Dose Beyond the Site Boundary

	Annual Dose
Annual total body dose (mrem)	8.64E-03
Annual skin dose (mrem)	9.60E-03

* Rather than the sum of the quarters, these values are based on annual meteorological data and total annual effluents.

Table 6-1 Summary of Doses from Gaseous Effluents (Continued)

5. Maximum Organ Dose at the Site Boundary (1.2 miles)

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Maximum Organ dose (mrem)	8.21E-03	5.73E-03	6.32E-03	6.80E-03	2.40E-02

6. Maximum Organ Dose Beyond the Site Boundary

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Maximum Organ dose (mrem)	3.36E-03	1.16E-03	2.24E-03	3.57E-03	9.60E-03

7. Dose to Nearest Residents within 5-Miles in each Sector with Residents

4.47 Miles NE

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta Air Dose (mrad)	2.02E-05	1.19E-05	3.79E-05	2.41E-05	1.25E-04
Gamma Air Dose (mrad)	5.72E-05	3.39E-05	9.20E-05	6.84E-05	3.30E-04
Maximum Organ dose (mrem)	3.24E-04	1.67E-04	2.78E-04	2.34E-04	1.08E-03

4.01 Miles ENE^{††}

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta Air Dose (mrad)	1.92E-04	8.15E-05	4.06E-04	1.02E-04	9.92E-04
Gamma Air Dose (mrad)	5.44E-04	2.31E-04	9.09E-04	2.90E-04	2.45E-03
Maximum Organ dose (mrem)	1.07E-03	5.18E-04	1.17E-03	5.38E-04	3.71E-03

4.59 Miles E

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta Air Dose (mrad)	8.20E-05	3.06E-05	3.33E-04	7.60E-05	7.38E-04
Gamma Air Dose (mrad)	2.32E-04	8.68E-05	7.28E-04	2.16E-04	1.84E-03
Maximum Organ dose (mrem)	3.78E-04	2.63E-04	9.39E-04	3.92E-04	2.59E-03

Table 6-1 Summary of Doses from Gaseous Effluents (Continued)

7. Dose to Nearest Residents within 5-Miles in each Sector with Residents (Continued)

4.24 Miles ESE

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Annual Cumulative*
Beta Air Dose (mrad)	2.36E-04	1.10E-04	4.53E-04	1.06E-03	7.36E-04
Gamma Air Dose (mrad)	6.70E-04	3.12E-04	1.03E-03	3.01E-03	1.69E-03
Maximum Organ dose (mrem)	9.45E-04	6.01E-04	1.29E-03	3.57E-03	2.93E-03

* Rather than the sum of the quarters, these values are based on annual meteorological data and total annual effluents.

† This was the sector with the highest dispersion and deposition values for the nearest resident identified in the land use census conducted in 2007.

Table 6-2 50-Mile Population Dose from Gaseous Effluents**A. 50-mile population collective dose**

Exposure Pathway	Total Body (person-rem)	Max. Organ (person-rem)
Plume	2.12E-03	2.16E-03
Ground	2.85E-03	2.85E-03
Inhalation	6.19E-02	6.93E-02
Vegetables	4.44E-02	4.43E-02
Milk	1.56E-02	1.55E-02
Meat	7.95E-03	7.93E-03
Total	1.35E-01	1.42E-01

B. Average Individual*

Exposure Pathway	Total Body (mrem)	Max. Organ (mrem)
Plume	5.94E-06	6.05E-06
Ground	7.98E-06	7.98E-06
Inhalation	1.73E-04	1.94E-04
Vegetables	1.24E-04	1.24E-04
Milk	4.37E-05	4.34E-05
Meat	2.23E-05	2.22E-05
Total	3.78E-04	3.98E-04

* These values are derived by dividing the 50-mile population collective doses by the population within 50 miles of Columbia Generating Station (356,993). The population estimate is based on the 2000 census conducted by the United States Census Bureau and documented in the Columbia Generating Station Final Safety Analysis Report.

7.0 REVISIONS TO THE ODCM

There were no changes to the ODCM in 2007.

8.0 REVISIONS TO THE PROCESS CONTROL PROGRAM (PCP)

There were no revisions to the Process Control Program in 2007.

9.0 NEW OR DELETED LOCATIONS FOR DOSE ASSESSMENTS AND/OR ENVIRONMENTAL MONITORING LOCATIONS

- 9.1 No new locations were identified for dose assessments as the 2007 Five-Mile Land Use Census showed no changes.
- 9.2 There were no new locations for environmental monitoring formally adopted into the program based on the 2007 Land Use Census.
- 9.3 No dose assessment or environmental monitoring locations were deleted.

10.0 MAJOR CHANGES TO RADIOACTIVE LIQUID, GASEOUS, AND SOLID WASTE TREATMENT SYSTEMS

No major changes (as defined by ODCM Section 6.4.3) were made to the radioactive waste systems (liquid, gaseous, or solid) during this reporting period.
