**PART 21 NOTIFICATION - FAILURE TO FULLY COMPLY WITH THE REQUIREMENTS FOR DEDICATION OF COMMERCIAL GRADE ITEMS**

"In accordance with 10CFR21, this letter is to inform you that Invensys Systems, Inc. (d/b/a Invensys Process Systems (IPS)) has identified a failure to fully comply with the requirements for Dedication of Commercial Grade Items (e.g. fuses, resistors, capacitors, etc.) provided to some of our nuclear customers. These parts, certified as safety-related basic components, were not subject to verification of functional performance characteristics as part of the Dedication process and therefore if not installed and tested in their intended application could represent a potential safety hazard.

"This condition was identified during the NUPIC (Nuclear Procurement Issues Committee) joint audit of our Foxboro, Massachusetts facility and immediate notification was provided to the member utilities through their web-based system. This Failure to Comply was confirmed on 11/2/07 and, based on our records, has been determined to be limited to the customers, orders and parts identified in [the report].

"Invensys has taken immediate corrective action to rectify the situation in that these parts are no longer provided as safety-related and we will be providing separate notification to each of the nuclear customers listed in [the report]. It should be noted that the subject materials were all controlled and provided in accordance with the approved IPS procedures which include requirements for inspections verifying the appropriate manufacturer, part number, markings and other physical characteristics. If these items have been properly installed in the intended Foxboro equipment, functional performance is typically verified through subsequent component or system-level testing."

The following customers are effected by this issue: American Electric Power, Arizona Public Service, Dominion Nuclear, Entergy, Exelon, First Energy, Indiana Michigan Power Co., NPPD, OPPD, Constellation, Union Electric, and Wolf Creek.

\*\*\* UPDATE ON 4/4/2008 AT 1633 FROM DAVID GOLDEN TO MARK ABRAMOVITZ \*\*\*

An updated list of parts and affected utilities was distributed. The affected utilities will be notified next week. The affected utilities are:

- Ameren UE
- American Electric Power
- Amergen Energy Co LLC
- Arizona Public Service
- Arkansas Power & Light
- Baltimore Gas & Electric
- Commonwealth Edison
- Connecticut Yankee Atomic
- Consolidated Edison Company of New York
- Detroit Edison
- Dominion Nuclear
- Duquesne Light
- Edison Material Supply LLC
- Entergy (Operations & Vermont Yankee)
- Exelon Nuclear
- Nine Mile Point Nuclear Station
- First Energy Corp
- Florida Power & Light (and FPL Seabrook)
- Georgia Power
- Gina Nuclear Power Plant
- GPU Nuclear
- Indiana Michigan Power Company
- Iowa Public Power District
- Maine Yankee Atomic Power
- Nebraska Public Power District
- New York Power Authority
- Northern States Power Company
- Nuclear Management Company
- Omaha Public Power District
- Pacific Gas & Electric Company
- PECO Energy Company
- Philadelphia Electric Company
- Portland General Electric Company
- Progress Energy (Carolinas & Florida)
- Southern California Edison
- Toledo Edison
- TVA
- Virginia Power Company
- Westinghouse Electric
- Wisconsin Public Service Corp.
- Wolf Creek Nuclear Operating

Notified the R1DO (Hansell), R2DO (Evans), R3DO (Skokowski), R4DO (Lantz), NRR (Hodge and Thorpe via e-mail), and FSME (Jankovich via e-mail).

April 4, 2008

U.S. Nuclear Regulatory Commission  
Document Control Desk  
Washington DC 20555-0001

SUBJECT: Notification of Failure to Comply, dated December 19, 2007

RE: Supplemental Information

Dear Sirs,

In accordance with 10CFR21, this letter is to inform you that Invensys Systems, Inc. [d/b/a Invensys Process Systems (IPS)] has identified the need to report supplemental information related to the subject notification provided on December 19, 2007.

In Attachment 2 of the December 19, 2007 notification (Enclosed), a limited number of affected customers and parts were identified. Subsequent to this notification, additional items have been identified that may be in the same condition [not subject to verification of functional performance characteristics as part of the Dedication process and therefore if not installed and tested in their intended application could represent a potential safety hazard]. The supplemental list of items (Attachment 1 to this letter) represents components identified as having been certified to nuclear customers from the IPS Foxboro MA factory; *we have not confirmed that all certifications were to 10CFR50 Appendix B and 10CFR21, only that some level of certification was provided.*

The presence of additional items requiring evaluation by our customers was confirmed on 2/7/08.

As communicated in the initial notification, Invensys has taken immediate corrective action to rectify the situation in that these parts will no longer be provided as safety-related unless processed through a formal CGI dedication process, compliant with current regulatory and industry standards. We will again be providing separate notification to each of the nuclear customers listed in Attachment 1 to this letter which will recommend that they review the procurement requirements, end-use and level of testing performed prior to or following installation.

The materials identified in Attachment 1 were controlled and provided in accordance with the approved IPS procedures in place at the time of delivery which included requirements for inspections verifying the appropriate manufacturer, part number, markings and other physical characteristics. If these items have been properly installed in the intended Foxboro equipment, functional performance is typically verified through subsequent component or system-level testing.

If there are any further questions regarding this notification, contact Jeff Larson, IPS Nuclear QA Director at 949-885-0716 or [jeff.larson@ips.invensys.com](mailto:jeff.larson@ips.invensys.com).

Sincerely,

A handwritten signature in black ink that reads "David Golden".
