21.21 UNSPECIFIED PARAGRAPH	

ALL DIMENSIONALLY VERIFIED COMMERCIAL GRADE ITEMS PROCESSED PER FISHER MANUFAC. PROCEDURE FMP 2K28

"Commercial grade items processed per FMP 2K28 (Fisher Processing Level D) may not address all the critical characteristics needed to determine if the item can be designated by the utility as a basic component. By accepting 10CFR21 on the order for Level D items, there is the implication that the item can be used as a basic component without further evaluation by the utility.

"During the latest NUPIC audit, it was pointed out that although FMP 2K28 specifically states that, 'This process does not verify the material or designate the item for use as a basic component,' 10CFR21 is only applicable to basic components.

"FMP 2K28 is intended to provide dimensional verification only for items where material verification was not readily available through Method 1 discussed in EPRI 5652. Parts provided per Level D are normally elastomer materials (diaphragms, o-rings, etc.) or packing and gasket materials. If a utility decides material verification is a critical characteristic, Fisher assumes that the utility will perform a material evaluation as required prior to designating an item as a basic component.

"In conclusion, Fisher assumed 10CFR21 responsibility because of defect reporting requirements but did not intend to imply that items processed to FMP 2K28 (Fisher Processing Level D) were capable of becoming a basic component without further evaluation by the purchaser.

"In the future, Fisher will no longer be able to accept 10CFR21 responsibility for parts processed to FMP 2K28 (Fisher Processing Level D).

Fisher Information Notice: FIN 2008-02

10 November 2008

Subject: Clarification of Fisher Controls Position Regarding Dimensionally Verified Commercial Grade Items

From:

Bill Fitzgerald
Nuclear Business Unit Director
Fisher Controls International LLC
205 south Center Street
Marshalltown, IA 50158
Fax: (641) 754-2854

Equipment Affected By This Information Notice:

ALL DIMENSIONALLY VERIFIED COMMERCIAL GRADE ITEMS PROCESSED PER FISHER MANUFACTURING PROCEDURE FMP 2K28.

Purpose:

The purpose of this Fisher Information Notice (FIN) is to clarify Fisher Controls' position regarding the processes providing dimensionally verified commercial grade items per Fisher Manufacturing procedure FMP 2K28, "Control of Commercial Grade Dimensionally Verified Items for Use in Nuclear Safety-Related Applications. This Information Notice is to address a finding levied during a recent NUPIC audit of the Marshalltown facilities.

We have informed our customers of record of this circumstance in accordance with 21.21 (b) of 10CFR21 because Fisher Controls International LLC is not aware of each and every application or system design and cannot determine whether an anomaly could cause a defect or "failure to comply," relating to a substantial safety hazard. In particular, this concern exists for instances in which a customer procured "dimensionally verified" commercial grade items (per FMP 2K28, Fisher Processing Level D) and imposed 10CFR21 on the order.

Receipt of this notice does not necessarily mean that the recipient has been shipped any of the subject equipment. It is expected that the recipients of this notice will review the information for applicability to their facilities, and if required, take the appropriate action as described in the section at the end of this notice.

Fisher Information Notice: FIN 2008-02

Applicability:

This notice applies only to the subject equipment supplied by Fisher Controls International LLC that meets all of the following criteria:

- Items provided as "dimensionally verified" per Fisher Manufacturing Procedure FMP 2K28 (Fisher Processing Level D).
- Orders that invoked 10CFR21.

This notice does not apply to items processed per FMP 2K27, "Control of Commercial Grade Items to be Dedicated for Use in Nuclear Safety-Related Systems", (Fisher Processing Level C). Items processed per Fisher Processing Level C meet all the steps required for dedicating a commercial grade component (with the exception of designating that the item is suitable for use as a basic component, which is carried out by the customer).

Description of Possible Concern:

Commercial grade items processed per FMP 2K28 (Fisher Processing Level D) may not address all the critical characteristics needed to determine if the item can be designated by the utility as a basic component. By accepting 10CFR21 on the order for Level D items, there is the implication that the item can be used as a basic component without further evaluation by the utility.

Discussion:

During the latest NUPIC audit, it was pointed out that although FMP 2K28 specifically states that, "This process does not verify the material or designate the item for use as a basic component," 10CFR21 is only applicable to basic components.

FMP 2K28 is intended to provide dimensional verification only for items where material verification was not readily available through Method 1 discussed in EPRI 5652. Parts provided per Level D are normally elastomer materials (diaphragms, o-rings, etc.) or packing and gasket materials. If a utility decides material verification is a critical characteristic, Fisher assumes that the utility will perform a material evaluation, as required, prior to designating an item as a basic component.

In conclusion, Fisher assumed 10CFR21 responsibility because of defect reporting requirements, but did not intend to imply that items processed to FMP 2K28 (Fisher Processing Level D) were capable of becoming a basic component without further evaluation by the purchaser.

In the future, Fisher will no longer be able to accept 10CFR21 responsibility for parts processed to FMP 2K28 (Fisher Processing Level D).

Fisher will also accommodate those orders requiring dedication traditionally offered as Level D through development and use of additional methods described in EPRI 5652.

Fisher Information Notice: FIN 2008-02

Action Required:

- No action is required if you have not ordered items processed to FMP 2K28 (Fisher Processing Level D).
- Fisher has identified customer orders with this processing requirement and is including a list applicable to each site as an attachment to this Information Notice.
- For items still in inventory, customers are requested to determine if there are other critical characteristics that need evaluation prior to installation.
- For installed items, the customer needs to review items identified and determine if material verification is a critical characteristic and required at this time.
- Fisher will evaluate items and suppliers providing Level D components based on all EPRI 5652 methods to assist in mitigating this issue.

10CFR21 Implications:

Fisher Controls requests that the recipient of this notice review it and take appropriate action in accordance with 10CFR21.

If there are any technical questions or concerns, please contact:
