During the 564th meeting of the Advisory Committee on Reactor Safeguards, July 8-10, 2009, the Committee considered Supplement 1 to NUREG-1907, "Safety Evaluation Report Related to License Renewal of Vermont Yankee Nuclear Power Station," which documents the staff's review of Entergy's confirmatory environmentally adjusted fatigue cumulative usage factor analyses for the core spray and recirculation outlet nozzles. The staff concluded that Entergy's analyses are acceptable; thus, the previous conclusions regarding the fatigue cumulative usage factors in the final safety evaluation report remain valid.
