THURSDAY, NOVEMBER 16, 2023

+ + + + +

The Subcommittee met via Teleconference,  
at 8:30 a.m. EST, David A. Petti, Chair, presiding.

COMMITTEE MEMBERS:

- DAVID A. PETTI, Chair
- RONALD G. BALLINGER, Member
- CHARLES H. BROWN, JR., Member
- VICKI M. BIER, Member
- GREGORY H. HALNON, Member
- JOSE A. MARCH-LEUBA, Member
- ROBERT MARTIN, Member
- WALTER L. KIRCHNER, Member
- JOY L. REMPE, Member
- THOMAS ROBERTS, Member
- MATTHEW W. SUNSERI, Member

ACRS CONSULTANT:

STEPHEN SCHULTZ

DESIGNATED FEDERAL OFFICIAL:

DEREK WIDMAYER

P-R-O-C-E-E-D-I-N-G-S

8:30 a.m.

CHAIR PETTI: Good morning, everyone. The meeting will now come to order. This is a meeting of the Advisory Committee on Reactor Safeguards Radiological Rulemaking, Policies and Procedures Subcommittee. I'm Dave Petti, chairman of the subcommittee.

ACRS members in attendance are Ron Ballinger, Tom Roberts, Joy Rempe, Vicki Bier, Bob Martin, Greg Halnon, virtually I see Matt Sunseri. We right now do not have Charlie Brown or Vesna, but they may show up.

MEMBER DIMITRIJEVIC: I'm here, I'm here.

CHAIR PETTI: Oh good, thank you.

MEMBER DIMITRIJEVIC: Hi, good morning.

MEMBER SUNSERI: And I'm connected, Dave, so.

CHAIR PETTI: I saw Matt Sunseri is here.

MEMBER MARCH-LEUBA: Yeah, and Jose's here too.

CHAIR PETTI: Oh, sorry, Jose, yeah. Jose March-Leuba is here. And our consultant Steve Schultz is with us. Derek Widmayer is the ACRS staff designated federal official for the meeting.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           The purpose of the subcommittee is to hear  
2           from the staff concerning comment resolution and  
3           status of draft final versions of the Advanced Reactor  
4           Content of Application Project, ARCAP, interim staff  
5           guidance document; Technology Inclusive Content of  
6           Application Project, TICAP, guidance documents.

7           The subcommittee will gather information,  
8           analyze relevant issues and facts, and formulate  
9           proposed positions and actions as appropriate. There  
10          is a session scheduled for the December 2023 full  
11          committee meeting, and the committee plans on  
12          preparing a letter report on this matter at the  
13          meeting.

14          The ACRS was established by statutes  
15          governed by the Federal Advisory Committee Act, FACA.  
16          The NRC implements FACA in accordance with its  
17          regulations found in Title 10 of the Code of Federal  
18          Regulations, Part 7. The committee can only speak  
19          through its published letter reports.

20          We hold meetings to gather information and  
21          perform preparatory work that will support our  
22          deliberations at a full committee meeting. The rules  
23          for participation in all ACRS meetings, including  
24          today's, were announced to the Federal Register on  
25          June 13, 2019.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1           The ACRS section of the U.S. NRC public  
2 website provides our charter, bylaws, agendas, letter  
3 reports, and full transcripts of all full and  
4 subcommittee meetings, including slides presented at  
5 the meetings. The meeting notice and agenda for this  
6 meeting were posted there.

7           As stated in the Federal Register notice  
8 and in the public meeting notice posted to the  
9 website, members of the public who desire to provide  
10 written or oral input to the subcommittee may do so,  
11 and should contact the designated federal official  
12 five days prior to the meeting, as practical.

13           Today's meeting is open to public  
14 attendance, and we have received no request to make an  
15 oral statement at the meeting. Time, though, is  
16 provided in the agenda after presentations are  
17 completed for spontaneous comments from members of the  
18 public attending or listening to our meeting.

19           Today's meeting is being held over  
20 Microsoft Teams, which includes a telephone bridge  
21 line allowing participation of the public over their  
22 computer using Teams or by phone. A transcript of  
23 today's meeting is being kept, therefore we request  
24 that meeting participants on Teams and the bridge line  
25 identify themselves when they speak, and to speak with

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 sufficient clarity and volume so they can be readily  
2 heard.

3 Likewise, we request that meeting  
4 participants keep their computer and/or telephone  
5 lines on mute when not speaking to minimize  
6 disruptions.

7 At this time, I ask the team attendees to  
8 make sure they are muted so we can commence the  
9 meeting.

10 We will now proceed. I note that Vice  
11 Chair Kirchner has joined us as well. And I call on  
12 Steve Lynch, Branch Chief of the Advanced Reactor  
13 Policy Branch in the Office of Nuclear Reactor  
14 Regulation, for opening remarks.

15 Steve.

16 MR. LYNCH: Good morning, members. Myself  
17 and my team that are in front of you are very excited  
18 today to talk to you about the work that has been  
19 ongoing for a number of years on both the NRC's  
20 development of the regulatory guide endorsing the  
21 Technology Inclusive Content of Application Project  
22 and the accompanying Advanced Reactor Content of  
23 Application Project.

24 We recognize that with an increasing  
25 interest in advanced reactors being licensed by the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 NRC, that it is important for the staff to develop  
2 guidance to support these early movers. In  
3 particular, while we are still working on developing  
4 a new framework in Part 53, we recognize that it is  
5 important to meet developers where they are today  
6 using the existing regulatory frameworks in 10 CFR  
7 Parts 50 and 52.

8 These guidance documents that are  
9 developed are intended to help improve the  
10 predictability and efficiency of both the development  
11 of advanced reactor applications, as well as the NRC  
12 staff's review of these applications.

13 The NRC staff has been diligent in  
14 preparing these documents for the both the preparation  
15 and review of advanced reactor applications and has  
16 worked extensively with stakeholders and members of  
17 the public to receive feedback.

18 Today we are going to provide overviews of  
19 the work that we have done to update these documents  
20 to reflect our best technical, licensing, and policy  
21 positions, as well as help the members understand how  
22 we have carefully considered the feedback received  
23 during the public comment period on these documents.

24 We look forward to good engagement today  
25 as we work to finalize these documents for use

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 hopefully in the next few months. So thank you very  
2 much.

3 MS. OBER: Good morning, my name is  
4 Rebecca Ober, and I'm Project Manager in the Advanced  
5 Reactor Policy Branch at DANU and Office of Nuclear  
6 Reactor Regulation. I'm going to give the initial  
7 overview, and then I'll turn it over to Anders for the  
8 detailed TICAP discussion.

9 So the purpose of this briefing is to  
10 provide a high-level overview of the TICAP reg guide  
11 and the nine ARCAP ISGs, as well as the public  
12 comments received and the NRC's disposition of these  
13 comments. During this briefing, the staff will  
14 provide a summary of the ARCAP and TICAP structure  
15 before discussing the ten documents in more detail.  
16 Then staff will wrap up with the path forward.

17 Staff has previously briefed the ACRS  
18 Future Plant Design Subcommittee on this topic  
19 multiple times. On March 17, 2021, staff provided a  
20 high-level overview of the ARCAP and TICAP structure,  
21 which was then updated on July 21 of 2021.

22 Then in December 17, 2021, staff provided  
23 the draft White Paper versions of the nine ARCAP ISGs  
24 and the TICAP draft reg guide.

25 In the short term, staff plan to use the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 ARCAP and TICAP guidance to support both Part 50 and  
2 52 non-light water reactor applications. In the long  
3 term, staff will update the guidance as appropriate to  
4 support the Part 53 rulemaking.

5 Revision 0 of all ten draft documents was  
6 issued in May 2023 for public comment. And Revision  
7 1 of the TICAP guidance was reissued in September 2023  
8 for public comment. The current list of documents and  
9 how to access them can be seen on this table. In  
10 addition, it also shows the number of comments  
11 received on the various documents.

12 The documents with the most comments were  
13 the TICAP draft guide Revision 0 and Revision 1,  
14 followed by the ARCAP roadmap ISG, with 68 comments.  
15 The number of comments received is consistent with the  
16 importance of the documents because both the TICAP reg  
17 guide and the ARCAP road map ISG are foundational  
18 guidance documents.

19 During an advanced reactor stakeholder  
20 public meeting on June 7, NRC staff discussed the  
21 ARCAP and TICAP documents, specifically the changes  
22 from the White Paper versions to the current draft  
23 versions. This meeting includes presentations by both  
24 NEI and NRC.

25 Since it occurred during the open comment

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 period, staff also included information on how to  
2 provide comments during that discussion. This was  
3 followed by another public meeting on August 22 for  
4 stakeholders to discuss their comments.

5 Similarly, a public meeting was held on  
6 September 26 to discuss Revision 1 of the TICAP draft  
7 guide, which included additional guidance related to  
8 the construction permit PRA developments. And again,  
9 this meeting was held during the public comment  
10 period, and guidance was provided on how to provide  
11 comments.

12 All 20 of the documents we'll discuss  
13 today are publicly available in ADAMS. And in  
14 addition, there's a public webpage with all key  
15 guidance documents and of meetings.

16 This guidance is being developed to  
17 support non-light water reactors. Because there are  
18 many different technologies under construction, the  
19 current light water reactor focus prescriptive  
20 guidance was not sufficient.

21 The NRC aims to have guidance that is  
22 technology inclusive, meaning it will work for any  
23 reactor technology. And we're also aiming to have  
24 guidance that helps applicants identify the most risk-  
25 significant aspects of the design.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           Finally, this guidance aims to have the  
2 end safety goals in mind instead of prescriptive paths  
3 to meeting those safety goals, hence the term  
4 performance-based.

5           In the near term, this guidance will  
6 support licensing of non-light water reactors that  
7 follows the licensing modernization project process  
8 under 10 CFR Part 50 and Part 52. All ten of these  
9 documents may be updated to account for final rule  
10 language of Part 53.

11           MEMBER ROBERTS:    Rebecca, it's Tom  
12 Roberts. Can you speak briefly to advanced applicants  
13 not using the LMP? Are they still on Reg Guide 1.206  
14 or the 1.70, or are there parts they would pick and  
15 choose from the new reg guide?

16           MR. SEBROSKY:    Yeah, so this, my name's  
17 Joe Sebrosky and I'm the Senior Project Manager in the  
18 Advanced Reactor Policy Branch. The near term needs  
19 that we have right now that have been identified are  
20 for the X-Energy construction permit application  
21 that's going to use the LMP process. That's coming in  
22 in the spring.

23           And then the other one of the near term  
24 need is the Natrium TerraPower Natrium's project.  
25 That's also coming in in the spring.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           Light water reactor applicants can choose  
2           to use the LMP process, but it's based on non-light  
3           water reactor applications. We don't know of any  
4           current light water reactor applicant that's going to  
5           pursue the LMP, so they would be following Reg Guide  
6           1.206 for their applications.

7           In addition, there are some non-light  
8           water reactor applications that we know of that may  
9           not use the LMP, like Oklo. That they may end up  
10          using pieces of parts. There's for example the ARCAP  
11          road map ISG has Appendix B, bravo, that talks about  
12          applicability regulations to non-light water reactors.  
13          They may end up using that and then use a different  
14          approach.

15          But their approach would be discussed or  
16          the expectation would be discussed with the staff on  
17          their preapplication phase.

18                 MEMBER ROBERTS: Okay, thank you. So the  
19                 focus really is LMP. If you don't follow the LMP  
20                 process, there may be parts you can pick and choose  
21                 from, but by and large it's a case basis. Is that  
22                 right?

23                 MR. SEBROSKY: Right.

24                 MEMBER ROBERTS: Okay, thank you.

25                 MS. OBER: As you can see from the list on

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 the screen, ARCAP is broad in nature and intended to  
2 cover guidance for a wide variety of non-light water  
3 reactor applicants. While TICAP guidance for off-  
4 normal reactor states only, ARCAP encompasses  
5 everything needed for a license application.

6 The TICAP's scope is governed by the LMP-  
7 based process, which is written in NEI 18-04, Revision  
8 1. NRC reviewed this document and endorsed it in Reg  
9 Guide 1.233 in June of 2020. To provide guidance on  
10 how to use the LMP, industry developed NEI 21-07, and  
11 Reg Guide 1.253 proposes to endorse this document with  
12 clarifications and additions.

13 So here's a chart that has been shown at  
14 many public meetings on ARCAP and TICAP, but it still  
15 provides a great holistic view of what is needed to  
16 license a non-light water reactor.

17 Please note that the Fitness for Duty  
18 Program, financial qualifications and insurance,  
19 aircraft impact assessment, performance demonstration  
20 requirements, Nuclear Waste Policy Act, and  
21 operational programs were added since this was last  
22 shown at an ACRS meeting, and that's in the orange box  
23 on the right-hand side.

24 MEMBER REMPE: I have a question. Where  
25 do you find combustible gas monitoring and control

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 guidance?

2 MR. SEBROSKY: So the combustible gas  
3 monitoring and control, and I'll look to folks that  
4 are on the bridge line to help me out, the LMP process  
5 would identify whether combustible gas and control is  
6 an important safety function.

7 So when you look at this slide, you see  
8 the licensing basis event analysis is in Chapter 3.  
9 That analysis would identify whether combustible gas  
10 and control warrants a safety-related function or is  
11 a safety -- a non-safety related special treatment  
12 function.

13 So depending on the outcome of the LMP  
14 process, it could show up in Chapter 6 or Chapter 7 if  
15 it's safety-related, or if it's non-safety related  
16 special treatment.

17 MEMBER REMPE: Okay, so if someone comes  
18 in and they don't identify controlled combustible gas  
19 generation as a critical safety function or whatever,  
20 I know we keep calling them something else. But one  
21 of the higher level safety functions. It probably  
22 won't show up at the licensing-basis event, and the  
23 staff may not identify that.

24 And then I'm just kind of wondering,  
25 because we saw one application where it just kind of

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 slipped through. And I'm just wondering how do we  
2 make sure the staff always is looking for that? I  
3 mean, if they don't have a zircaloy-based cladding,  
4 there are still ways you can have combustible gas  
5 generation. It may not be hydrogen, but you can have  
6 it.

7 I'm kind of wondering how one makes sure  
8 that the staff looks for that carefully in the  
9 guidance and the applicant knows to look for it a  
10 little more carefully than what we're seeing.

11 MR. SEBROSKY: Yeah, I understand the  
12 question, and it gets back to the fundamental belief  
13 in the process, the licensing modernization project  
14 process that it'll identify important safety-  
15 significant functions, both safety-related and non-  
16 safety related.

17 MEMBER REMPE: Well, maybe there ought to  
18 be a checklist of even though the applicant doesn't  
19 identify it as a critical safety function at the high  
20 level, that the staff goes through maybe four or five  
21 things, heat removal, heat generation, criticality,  
22 etc.

23 And maybe that ought to just be a  
24 checklist somewhere in the guidance. I mean, there  
25 may be some other ones I'm not thinking about that the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 applicant may come up with. But it just seems like  
2 there ought to be a checklist that everyone things  
3 carefully about some known concerns, is where I'm  
4 coming from. Just a comment.

5 MR. SEBROSKY: Understand.

6 MEMBER MARTIN: Well, and then I will --  
7 break out here. My pet peeve of hazards analysis. So  
8 certainly in the documentation that you all have  
9 created surrounding, you know, this reg guide and  
10 really the whole move towards risk-informed framework  
11 mentions hazards a million times. It's great. And  
12 risk a lot too.

13 But then when you look at the content of  
14 an application, it's kind of buried. And certainly in  
15 my experience, and I've done this for money before,  
16 hazards analysis is what creates these lists, right.  
17 And there are methods that are recognized in you know,  
18 really all industries.

19 But there's commonality to those methods  
20 that you'll find a lot of consensus among safety  
21 experts on that it -- while at an early stage these  
22 are qualitative type methods. That over, of course,  
23 the evolution of a design they can become more  
24 quantitative.

25 And they provide the evidence necessary to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 support the downstream activities of safety analysis  
2 and the basis for design change and such. And rather  
3 than seeing something that pops up and, say,  
4 combustible gas, you know, if it showed up on, you  
5 know, implicitly on a downstream list, and then you  
6 think more to the example, you would say it's almost  
7 becoming prescriptive.

8 But rather, elevating the role of hazards  
9 analysis is -- would probably be more technology-  
10 inclusive with the expectation that these lists would  
11 be otherwise created by the applicant.

12 So my read of the draft reg guide, I see  
13 the statements. Of course I've already mentioned  
14 these 18 statements of hazards analysis. But in  
15 Chapter 1, there's a statement about you present the,  
16 you know, the design basically or rear design.

17 And the clause in the sentence there was  
18 "and its connection to safety analysis." To me that  
19 is the hazards analysis. That is the connection. And  
20 to not have a chapter like number 2 that is explicitly  
21 the hazards analysis, that there are rules to how to  
22 come up with that list, seems to miss the boat.

23 Because I think in any kind of  
24 deliberation on the integrity and safety of design,  
25 you had to pull the thread. It's that connection.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 And everyone will say yes, the connection's there.  
2 But right now, it's bring your rock.

3 And understanding that maybe outside is  
4 relatively new to us, but in other industries there  
5 are pathways that are accepted and have commonality.  
6 And for us not to have some specificity as to what  
7 that looks like seems to lead to the high potential of  
8 inadequate applications.

9 And in the spirit of being inclusive, I  
10 think the most important thing is for the staff to  
11 receive quality applications that they can trace back  
12 to decisions that go back to a qualitative assessment  
13 section. And while it appears under the surface, it  
14 really needs to be elevated, because we're all about  
15 safety.

16 So it's a little bit of preaching. It's  
17 a lot of preaching. But how do you defend not  
18 elevating hazards analysis to a top-level chapter on  
19 this? It really should follow that Chapter 1 in this  
20 case.

21 MR. SEBROSKY: So I'll look to Marty, so  
22 Marty Stutzke, Bill Reckley, or Boyce Travis to add  
23 anything to what I'm about to say. So when you look  
24 at the importance --

25 PARTICIPANT: Check testing one, two, one,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 two. Check, check, one, two, one two, one two. One  
2 two. Mic check.

3 MEMBER REMPE: Could someone --

4 PARTICIPANT: Mic check, mic check.

5 MEMBER REMPE: That's Thomas. Tom, is  
6 someone on the internet virtually like Matt or Vesna  
7 or Jose, can you confirm you can still hear us?

8 PARTICIPANT: We can hear you.

9 MEMBER REMPE: You can hear us?

10 MEMBER DIMITRIJEVIC: We can hear you, but  
11 we hear that track too.

12 MEMBER REMPE: Okay. That was Thomas.  
13 And I just wanted to make sure that you guys can still  
14 hear us.

15 Go ahead and continue with the meeting.  
16 I'm not sure what's going on, but I think we're okay.  
17 Go ahead.

18 MR. SEBROSKY: So what's being shown is  
19 the first eight chapters of the SAR, which is the LMP-  
20 based process, which relies on a robust analysis of  
21 the hazards.

22 And that's driven by the expectations for  
23 the development of the PRA and the defense-in-depth.  
24 And Reg Guide 1.247, which endorses the level 3 PRA  
25 methodology, is the process by which we rely on those

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 hazards being identified as part of the level 3 PRA.

2 There is a discussion, and Anders is going  
3 to be talking about in more detail about how the PRA  
4 results are placed in various chapters. But I  
5 understand the concern about ensuring that there is a  
6 robust hazard analysis and that it be captured either  
7 in the SAR or in the supporting documents for the SAR.

8 Marty, is there anything you wanted to add  
9 to that?

10 MR. STUTZKE: Hi, this Marty Stutke, I'm  
11 the Senior Technical Advisor for PRA in NRR DANU.

12 I would point that we had previously  
13 developed and presented to the committee our draft  
14 guidance DG-1413, which is the technology-inclusive  
15 identification of licensing events, which lists a  
16 whole number of techniques such as haz ops, FMEAs,  
17 etc., for identifying hazards and was developed  
18 specifically to address ACRS comments about the need  
19 to start with a blank sheet of paper like that.

20 However, DG-1413 is linked to the Part 53  
21 rulemaking, so we're going to decide, we'll need to  
22 consider whether we want to issue it in advance of the  
23 rulemaking or whatever.

24 MEMBER MARTIN: I appreciate what you said  
25 there. The activity of determining licensing basis

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 events is different certainly from a hazards analysis.  
2 It does heavily rely on a hazards analysis. But the  
3 hazard analysis, well, just to leverage why Joy says,  
4 provides this list.

5 It's, you know, analogous to like in Reg  
6 Guide 1.203, right, where you have the accident safety  
7 analysis. You have a PIRT to have a step prior to  
8 actually doing the exercise of in that case  
9 deterministic safety analysis.

10 Or you have the experts come in and assess  
11 in analogous sense risk in a qualitative sense. And  
12 basically score the characteristics of the problem  
13 using heuristic methods.

14 And it applies here as well. It's just a  
15 higher level, and it's appropriate, not just because  
16 it drives requirements. But it's appropriate because  
17 of the precedent and past success. And of course not  
18 only I mentioned how it's being applied to other  
19 industries. But the Department of Energy, and they  
20 rely on it heavily.

21 And so for folks in our industry that have  
22 familiarity with the Department of Energy's process,  
23 I think you'll find a general appreciation for that  
24 step, not just as a step along the way, but as really  
25 the focal point of any kind of safety deliberation.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 It is something that's easy to understand and you can  
2 get from there to anywhere in the safety case.

3 And I didn't criticize the fact that it's  
4 not mentioned. It's just not at -- it's just not  
5 given the attention. And really the attention means  
6 more specificity about what that looks like. I'm  
7 concerned that you'll get a light touch.

8 And of course a light touch would  
9 invariably have weaknesses. You'll spend a lot of  
10 time churning on the approval process. Applicant one  
11 will give you something, and applicant two will look  
12 completely different. Maybe in their minds, since  
13 they're, you know, they think everything is there.

14 Unless you prescribe something,  
15 leveraging, you know, not necessarily, not methods  
16 from industry. But to some extent from academia and  
17 you know. And when I say academia, something with  
18 some meat on it, not the really 50,000 foot kind of  
19 language you oftentimes get from industry documents.  
20 Which some of the ones that we were talking about here  
21 I would say fall into that category. Maybe 10,000 to  
22 give us credit.

23 But nonetheless, and I'm showing my bias  
24 of course, some deterministic thinking, but some  
25 compromise in that direction is a better path for

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 certainty in the licensing process. And that  
2 certainty comes down to a consistent example.

3 Anyway, my second preach. But I'm sorry.

4 (Laughter.)

5 MEMBER ROBERTS: Yes, Tom Roberts again.  
6 I have two questions, and probably this is the right  
7 slide to ask them. But for that, I was wondering,  
8 Marty made a great comment I think about Draft Guide  
9 1413 and its applicability to 10 CFR Part 53.

10 Was there explicit consideration of that,  
11 since now this ARCAP and TICAP is being decoupled from  
12 Part 53 to revisiting the decision to -- when to hash  
13 1413?

14 MR. SEBROSKY: So I guess the short answer  
15 is that's under consideration. If you look at the  
16 ARCAP road map ISG, you see that we have that draft  
17 guide listed as something that's under development  
18 that could potentially influence an update to the  
19 document down the road.

20 But we haven't made a determination on  
21 whether to put that in as part of the 50 and 52  
22 update, or how we would take the ARCAP/TICAP guidance  
23 and adjust it for the Part 53 language once we get a  
24 Commission decision.

25 So if it's -- it's on the list and the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 appendix, but at this point, we identified it as a  
2 potential update for a future revision. That's about  
3 it.

4 CHAIR PETTI: So we did, in our Part 53  
5 letter, recommend that that draft guide be issued  
6 independently because we felt it was so important.  
7 It's this exact issue coming back again.

8 MR. SEBROSKY: Understand.

9 MEMBER KIRCHNER: Yeah, I think this is a  
10 good point. To the extent that a critic or a skeptic  
11 would look at this and say, well, you just reordered  
12 the deck from a conventional 50/52 application.

13 And yes, it's tailored to some of the  
14 aspects of LMP and the referenced NEI guide. But did  
15 that kind mean that Bob's talking about doesn't find  
16 its way in here, then you -- then the next step is  
17 then oh, okay, you -- then you put everything on that  
18 PRA and that somehow is inclusive enough that it  
19 identified all the hazards.

20 And if it's not, then -- completeness with  
21 the PRA and so on and the quality becomes an issue for  
22 some of the advanced designs that don't have the  
23 maturity and such.

24 So the hazards analysis is kind of a, I  
25 wouldn't call them deterministic, but it's a logical,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 systematic way of making sure you've covered the  
2 waterfront, catch that combustible gas if that's a  
3 potential, and incorporate the good work that was done  
4 by you in that draft reg guide.

5 So I'll stop there.

6 MEMBER MARTIN: I'll try to answer. So in  
7 previous conversations, you know, with staff members  
8 and such and others, there is a feeling that maybe  
9 it's all there. Again, I don't like the fact that  
10 it's under the surface, but there's several reg guides  
11 on performing different sorts of PRA, right. Maybe it  
12 was eight, nine, I don't know, ten. There's quite a  
13 few.

14 And one way to look at it is that well,  
15 you're just going to do it all, you know. But there  
16 is no screening of that, which would otherwise come  
17 from your hazards analysis.

18 And in some ways, you know, an applicant  
19 comes in and they're just going, applicant still likes  
20 a prescription, despite what some people say. But  
21 people that do the work kind of do things by  
22 procedure.

23 And if they look at the list of reg guides  
24 for doing PRAs, they're just going well, I got to do  
25 reg guide this, this, this, this, you know, at

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 different levels. And certainly, I guess if you do  
2 everything, somewhere along the line you will have  
3 done the right thing.

4 But the hazards analysis, you know, it  
5 will prioritize. Which again, the same purpose of  
6 like a PIRT. It will screen things that are  
7 unnecessary. Maybe for whatever reason we don't need  
8 combustion again.

9 So you could get -- you could clear the  
10 air earlier on. And in an age where there's a lot of  
11 pressure to getting, you know, expedite reviews, but  
12 obviously with the integrity, you want a framework to  
13 support that.

14 And so, but if you're strict, you're  
15 probably okay. But I worry people won't be strict.  
16 And they don't, shouldn't have to be. And I think the  
17 solid hazard analysis, maybe myself, will go a long  
18 way towards making everyone's life easy. Not a  
19 preach, I don't think that's a preach. I'm not  
20 counting that one.

21 MEMBER HALNON: Just to be clear, though,  
22 what your position is now is that NEI 18-04, when  
23 you're going through the licensing basis event  
24 selection process, which is comprehensive, you're  
25 saying that that is going to look at all these

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 hazards.

2 If they're significant enough to the  
3 plant, that they'll be part of the licensing basis  
4 event selection, which will then play out later on in  
5 the process.

6 Is that essentially where we're at right  
7 now?

8 MR. SEBROSKY: That's correct.

9 MEMBER HALNON: Okay.

10 MR. SEBROSKY: That summarizes it. Did  
11 you want to add anything?

12 MR. TRAVIS: Yeah, so this is Boyce Travis  
13 with the staff. I think it's -- I think we understand  
14 ACRS's comment. And I think it's important to  
15 contextualize the role of what's being discussed here  
16 in the sense that's guidance for what goes in the  
17 application that gets submitted to the NRC, versus  
18 what's being done at a level below that in the work  
19 that's done on the design.

20 And so the staff's goal was to try and  
21 create some performance-based, technology-neutral  
22 guidance, and obviously that results in some --  
23 simplifications isn't the right word. But we can't  
24 cover the waterfront of all the designs that are out  
25 there.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           And so a lot of that goes into what's in  
2           the guidance in NEI 18-04 for the LMP process and  
3           what's in that red box in the middle of the slide that  
4           is work that's being done by the applicant and being  
5           looked at by the staff but isn't necessarily being  
6           reflected in the application.

7           MEMBER ROBERTS: So I guess I change the  
8           subject a little, but I had two questions I thought  
9           were probably worth asking on this slide. One is  
10          cliff edge effects. It seems like I couldn't I find  
11          any discussion of cliff edge effects in the reg guide,  
12          in the NEI 21-07 document.

13          And the real -- the question I found other  
14          than the LMP document itself was in one of the FAQ  
15          documents that talks a little bit about what that is.  
16          And it -- the way it's described is more of a  
17          deterministic process even though it's characterized  
18          under PRA.

19          So it just seems like that's a very  
20          important aspect of the LMP process. And how that  
21          gets rolled up in either the TICAP or the ARCAP wasn't  
22          clear to me. I was wondering if you could comment on  
23          where you'd expect to find that.

24          MR. SEBROSKY: So I'll take a crack at it.  
25          So one of the things that is a cornerstone of the LMP

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 process is the event sequences and plotting that on  
2 the frequency consequence curve. And there's an  
3 expectation that the uncertainties be considered as  
4 part of that process.

5 And I believe embedded in that in  
6 certainties are things like looking at the cliff edge  
7 effects. So I'll look to any member of the staff  
8 that's on the -- in the Teams to correct if I  
9 misstated anything.

10 MR. GILBERTSON: So this is Anders  
11 Gilbertson, Senior Project Manager on the NRC staff.  
12 I would just add that, you know, there are also as  
13 part of following the non-LWR PRA standard, there are  
14 attributes and supporting requirements in that  
15 standard that specifically address cliff edge effects.

16 And so, in that way it's very much,  
17 probably say this a lot, it's kind of baked into LMP,  
18 say invoked in the LMP methodology the use of the PRA  
19 standard.

20 MEMBER HALNON: Yeah, and I just, I've got  
21 the 18-04 in front of me. It's very explicit. But  
22 there's a question at the end that says, have you  
23 assessed cliff edge effects in the PRA. So it's very  
24 --

25 MEMBER ROBERTS: I think it's in 18-04.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 I think it's pretty clear there. And there's an FAQ  
2 if you go search through all the supporting documents  
3 that industry put out. And it gives some  
4 clarification what that means.

5 What I couldn't find is where that would  
6 be. Would show up in the safety analysis reports.  
7 And how that would be used. For example, the new EPZ  
8 determination reg guide specifically requires  
9 consideration of cliff edge effects.

10 So when you look at what facts and  
11 scenarios are considered for EPZ determination, you  
12 have to go look in the, explicitly address  
13 uncertainties and cliff edge effects.

14 And it seems like the kind of the thing  
15 that ought to be bubbled up into a specified  
16 subsection of one of these documents so that you know  
17 where to find it and it puts out a clear expectation  
18 of what you expect to see in an application. That's  
19 my comment.

20 I agree with you, Greg, that it's in  
21 there. It's also when you get on the details of  
22 exactly how you do it, it's not entirely clear. But  
23 that's just that nature of, as Bob would say, hazards  
24 analysis. Maybe we have to get to the point of  
25 figuring out what is just outside of your expected

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 frequency of occurrence that really makes a big  
2 difference.

3 And to make sure those are accounted for  
4 in some of these, what I would call level 5 defense-  
5 in-depth type of assessments where you want to have  
6 appropriate consideration for, you know, everything  
7 failed, how do you protect the public. And so it just  
8 seemed like that's the kind of thing that ought to be  
9 more highlighted than, again, I can guess where .

10 But I would guess in the PRA discussion,  
11 because that's where it shows up in 18-04. But it is  
12 just a suggestion to bubble that up into something  
13 that's a little easier to find.

14 MR. SEBROSKY: Yeah, like a hazards  
15 analysis.

16 MEMBER ROBERTS: And my second question  
17 has to do with the, I guess more the number of  
18 chapters and the SSC descriptions. If a look at a  
19 traditional SAR, you're probably talking five or six  
20 chapters describing the fluid systems, the electrical  
21 systems, the I&C systems, the auxiliary systems.

22 And this condenses it into parts of two  
23 chapters, the safety-related, and what was the other  
24 one, the non-safety related with special treatment  
25 SSCs. And I was wondering if you've looked at what

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 that might lose in terms of context.

2 Because it seems like to understand why  
3 particular SSCs have been bubbled up to be safety-  
4 related, you kind of have to understand the whole  
5 plant and the types of SSCs that were not considered  
6 to be safety-related or the non-safety with special  
7 treatment just to have the perspective on what they  
8 do.

9 And when I look at the LMP, I look at the  
10 two definitions of what could be safety-related. One  
11 is the obvious things that mitigate accidents. But  
12 the other one is the things that prevent accidents  
13 from becoming a higher classification than how they're  
14 categorized.

15 So an SSC that keeps a, you know, a DBE  
16 from becoming an AOO, that kind of thing is also  
17 safety-related. And how the decision is made of what  
18 SSCs are in that class and not in that class of things  
19 that are there to operate the plant within the bounds  
20 of the safety analysis is the way I usually think of  
21 it.

22 It becomes clearer when you have all of  
23 the important SSCs described. I was wondering if  
24 you'd looked at that, because this seems like it  
25 condenses it quite a bit. And you may have missed

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 something in terms of the, you know, condensing.

2 So I was looking for perspective whether  
3 you've table-topped this or looked at examples of what  
4 comes out and what's left in the SAR by the time you  
5 get done with this prescription.

6 MR. SEBROSKY: So to answer your question,  
7 during the development of these documents, as part of  
8 the TICAP process, we did table-top four different  
9 designs.

10 The designs included the X-Energy design,  
11 the VTR, which is the versatile test reactor, which is  
12 a liquid sodium chloride design. A preliminary  
13 version of X-Energy to look at what a micro reactor  
14 portion of the SAR might look like. And then a molten  
15 chloride salt fuel reactor.

16 So we did do table-tops, and those table-  
17 tops looked at various parts of the SAR. It wasn't  
18 the complete -- each one had its focus on what it was  
19 looking at. And the results of those table-tops were  
20 reflected both in NEI 21-07 and in our DG-1404.

21 In addition to that, we've had  
22 preapplication discussions, both with Natrium and with  
23 X-Energy, on their table of contents, what it would  
24 look like. And we've been providing feedback to them  
25 during the preapplication phase.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So we have looked at both via -- through  
2           the table-tops and with the preapplication discussions  
3           with those two applicants what the various SAR content  
4           would look like using the NEI 21-07 DG 14-04 process.

5           MEMBER ROBERTS: And I suppose you would  
6           work with the applicants on how they applied the reg  
7           guide and the resulting opportunity to clarify or  
8           expand the content from the reg guides if what you  
9           find is -- is not. I was going to make sure they  
10          looked at.

11          Yeah, one example that occurs to me,  
12          getting specific, is like a rod control system, where  
13          typically that will be non-safety because you have an  
14          independent scram system. But the safety analysis may  
15          have assumptions on numbers of rod and rod speeds.

16          And if your system were, your rod control  
17          system were to fail such that the number of rods or  
18          the speed were to be greatly above what you assume,  
19          and maybe that would promote the accident from one  
20          category to another. And so that would push for the  
21          rocket hold system to be considered as a either safety  
22          related or not safe with special treatment.

23          So without that discussion in the SAR, it  
24          would be hard to see that as a potential issue. So  
25          that's the kind of thing I'm thinking when I made the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 comment. It's just something that's worth looking at  
2 and making sure there's enough information to be able  
3 to make those informed decisions.

4 It sounds like you've looked at that as  
5 part of these table-tops? It probably needs to  
6 continue to look at that issue, apply this.

7 MR. SEBROSKY: Yeah, so I would say we've  
8 looked at it as part of the table-tops. And then  
9 we're actively engaged in pre-application discussions  
10 with both Natrium and X-Energy.

11 Ian Jung is going to add some more  
12 background on that.

13 MR. JUNG: Yeah, my name is Ian Jung,  
14 Senior Reliability and Risk Analyst. And I'm the  
15 overall technical lead for X-Energy.

16 So yeah, we agree that overall  
17 understanding of all the systems, how they behave and  
18 how they contribute to the safe operation of the  
19 plant. We understand that -- for X-Energy, we are  
20 undergoing readiness -- preapplication readiness  
21 assessment right now. And that we are actually  
22 looking at their draft preliminary safety analysis  
23 board.

24 Actually on the subject of those systems  
25 that may not be safety-related or non-safety related

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 with special treatment, we are having dialog and  
2 giving some feedback how those non-safety related  
3 systems are potentially needed to be understood within  
4 the context of the safety analysis.

5 Also with respect to certain regulations  
6 of course require describing certain SSCs to be a part  
7 of the SAR, safety analysis report, because depending  
8 -- regardless of the classification, you know just for  
9 example.

10 One more thing to add is that for PRA,  
11 when PRA does not start with a classification, right,  
12 it starts with a systems as a whole. So PRA, we  
13 expect the PRA to be modeling all these systems to the  
14 extent that it is meaningful for the safety of the  
15 plant.

16 In that regard, I'm sure there's going to  
17 be some assumptions regarding some of the non-safety  
18 related systems that may contribute to the overall  
19 risk profile and so on.

20 So their PRA standards requirements on how  
21 they screen those systems for making assumptions and  
22 so on. So in our guidance documents, there's, I think  
23 of our DG-1404, we expect the certain key essential  
24 assumptions on PRA to be described in that assumption.

25 Even those that are non-essential

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 assumptions, I think those may not be -- those might  
2 be also subject to staff's regulatory audit during the  
3 license process.

4 MEMBER KIRCHNER: Just to add to Tom's  
5 point, my sense is if you get an application and you  
6 just get information on what's in the box in the upper  
7 left corner there, and they've already screened out a  
8 number of systems, I suspect, because I've been  
9 watching what's going on with recent applications,  
10 you're going to in the audit process ask for a lot  
11 more information to backfill how you determined, you  
12 the applicant, determined that you could do a light  
13 touch on this. And I'm seeing it happening with the  
14 applications that you're actively considering.

15 And I'll not go any further on that, but  
16 I think that's what's going to happen in practice,  
17 Tom. Because you'll pull the string and you'll say  
18 well, how did you cut that one out and why isn't it  
19 described. Or why is it not important.

20 And I think what you're doing with it,  
21 recent applications with the audit process is much  
22 more efficient than just letting a lot of RAIs pile  
23 up.

24 So I am applauding what's going on, but I  
25 think -- we'll see when you actually try it with the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 real applications, which is a lot more than a desktop  
2 exercise. And you start pulling the thread on  
3 classification systems in particular. We'll probably  
4 beg for a lot more information.

5 I'm just -- that's my intuition, and it's  
6 one member's opinion.

7 MEMBER ROBERTS: Yes, so I'm guessing  
8 there's a tradeoff between what information is pulled  
9 and therefore doesn't have to be maintained for the  
10 life cycle of the plant, what information is pushed.  
11 And then is definitely going to be provided and has to  
12 be maintained for the life cycle. Is that really what  
13 the tradeoff is?

14 MR. SEBROSKY: Yes. There's an  
15 expectation that the PRA needs to be continuously  
16 assessed and updated based on the information that  
17 you're getting from a plant.

18 But reliability and capability, if those  
19 key assumptions that you made in the PRA are different  
20 than what you see from the actual plant, the  
21 expectation is that the PRA would be updated. And if  
22 there's a change in the licensing basis events, that  
23 that would be something that would be brought forward  
24 to the staff.

25 So there's an effort that we have underway

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 independent of the application guidance called TIRICE,  
2 technology inclusive risk-informed change evaluation  
3 process, that after the plant receives an operating  
4 license, how do you ensure that you're continuing  
5 assessing the plant and reflecting that in PRA updates  
6 and potential changes that would need to be brought to  
7 the NRC's attention.

8 I'm looking to see if, Ian, was there  
9 anything you wanted to add?

10 MR. JUNG: Yeah, this is Ian Jung again.  
11 I'm looking at some of these new designs.

12 And I just want to share that overall  
13 simplicity of the design and overall expected risk  
14 profile of the plant, and the whole risk-informed and  
15 performance-based approach we are pursuing is based on  
16 our safety-focused framework that some might stay away  
17 from traditional prescriptive elements and provide the  
18 other performance-based framework with some  
19 flexibility.

20 And but the capability and reliability  
21 targets and then applied and those have to be achieved  
22 and managed and maintained. That's the framework we  
23 are in. Yeah, definitely it's just a balance.

24 If we wanted to be, we could be as  
25 prescriptive as light water reactors. But I think we

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 have an opportunity to help the industry applicants  
2 and execute the principles of risk-informed and  
3 performance-based.

4 And there's a whole set of requirements  
5 and expectations regarding maintaining the PRA, use of  
6 operating experience, and change management process,  
7 and so on. And we have to follow the principles and  
8 see how it goes. But I think our safety focus will  
9 maintain all the way throughout the process.

10 MS. OBER: Okay, so back to the slide.  
11 The red boxes now shown are what in ARCAP, part of  
12 Chapter 2 and Chapter 9 to follow the SAR and all  
13 other components necessary to license a non-light  
14 water reactor are now included. ARCAP also  
15 encompasses the information included in TICAP.

16 And now the red boxes are what NRC staff  
17 and contractors have developed or are developing  
18 guidance for. So there is certain guidance for TICAP  
19 and ARCAP documents.

20 The applicability has not been constrained  
21 to non-light water reactors because the major  
22 document, specifically NEI 18-04, NEI 21-07, and Reg  
23 Guide 1.233 are also limited to non-light water  
24 reactors.

25 All ISGs have a new footnote that any

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 light water reactor applicant should engage the NRC  
2 early if they desire to use LMP. There is now a clear  
3 delineation between applicant guidance and review  
4 guidance.

5 Finally, references to documents without  
6 complete NRC staff review have been removed. For  
7 those in-development documents that may result in  
8 revisions to the respective ISGs, we have added an  
9 appendix at the end to serve notice to that effect.

10 CHAIR PETTI: Just a question on the LWR  
11 footnote. Is it because there's additional  
12 requirements that LMP doesn't touch upon?

13 MR. SEBROSKY: One of the underlying  
14 concerns, first and foremost, if you look at 10 CFR  
15 Part 53 notes, the Subpart A, it's thought that that's  
16 an LMP-based approach, both for non-light water  
17 reactors and light water reactors. So we're  
18 eventually going to have to address that based on the  
19 Commission basis.

20 The underlying concern right now is we  
21 have a level 3 PRA endorsed for non-light water  
22 reactors, Reg Guide 1.247. For light water reactors,  
23 Reg Guide 1.200 doesn't go to the same extent. It's  
24 a level 3 PRA that you need to support the LMP  
25 process.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So trying to work that into the process at  
2 this stage is a little difficult. So that's one of  
3 the main reasons.

4           The suggestion, or the guidance  
5 essentially says if a light water reactor wants to use  
6 the LMP process, we encourage preapplication  
7 discussions. And one of the first things that we  
8 would probably asking is how are you developing your  
9 level 3 PRA.

10           MEMBER HALNON: One other quick question  
11 before we move on. The only thing I didn't see is any  
12 kind of discussion of decommissioning, and with these  
13 new reactors, it could get very complex on the  
14 decommissioning side. Is that later down the road, or  
15 is there any thought about at least give it some  
16 thought on the front end?

17           MR. SEBROSKY: Yeah, I think we deferred  
18 that for developing the guidance for Part 53, the  
19 decommissioning guidance, I don't know that we're,  
20 like you say, we're explicit in the ARCAP guidance as  
21 far as what's expected at the application stage  
22 relative to decommissioning.

23           MEMBER HALNON: Because you do have I  
24 think in the financial piece talking about making sure  
25 there's funds set aside. But what are you setting

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1       aside funds for if you don't have at least a high-  
2       level strategy of how you're going to get this cleaned  
3       up?

4                       So I know it's premature and it's probably  
5       not relevant to the initial applications coming in,  
6       but at some point there's going to be discussion  
7       demand on decommissioning, and how are you going to  
8       rid of some of this exotic high tech stuff that.  
9       Especially the transportable stuff that you want to  
10      take away and put some place.

11                     MR. SEBROSKY: Understand.

12                     MS. OBER: Okay, for the principal design  
13      criteria, TICAP guidance covers the criteria  
14      associated with off-normal conditions while  
15      appropriate ARCAP ISGs address the principal design  
16      criteria associated with normal conditions. And Reg  
17      Guide 1.232 provides additional guidance, and the  
18      ARCAP road map recommends discussion PDCs during the  
19      preapplication phase.

20                     At this point, we're going to get into the  
21      TICAP-specific discussion, and I'll turn it over to  
22      Anders.

23                     MR. GILBERTSON: Okay, thank you, Rebecca.  
24      Morning, everyone. Again, my name is Anders  
25      Gilbertson, I'm a Senior Project Manager in the DANU

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 Office of Nuclear Reactor Regulation. I have a  
2 background in risk and reliability before coming to  
3 DANU.

4 So today I'm going to be providing just a  
5 high-level overview first of the TICAP guidance  
6 documents. And then with a focus on getting to  
7 resolution of public comments on this document. Slide  
8 15, please.

9 Okay, so as was discussed a little bit  
10 earlier, the overall goal of the TICAP guidance is to  
11 provide a technology-inclusive approach for developing  
12 the contents of applications as a matter of  
13 implementing the licensing modernization project  
14 methodology for LMP. And TICAP guidance is intended  
15 to promote efficient development and review of an LMP-  
16 based application.

17 As a matter of accommodating outcomes of  
18 implementing the LMP methodology, the structure of the  
19 SAR resulting from these TICAP differs from the  
20 traditional structure, as we've talked about earlier  
21 already. And different as it relates to this SARs  
22 structure for a light water reactor based on the  
23 standard review plan. And I'll go into that a little  
24 more detail in the next couple slides.

25 Just to sort of set the foundation here,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 the scope of the TICAP guidance is sort of necessarily  
2 governed by the LMP methodology, which is defined by  
3 the three major processes for establishing licensing  
4 basis events, or the licensing basis. And that  
5 includes identification of licensing-basis events, the  
6 classification of SSCs, and establishment of special  
7 treatments for certain SSCs, and determination of the  
8 facility that's in the SSCs.

9 In addition to being risk-informed and  
10 performance-based, I wanted to note the LMP  
11 methodology is a PRA-led approach. So the PRA  
12 features very heavily.

13 And the optimal endpoint of the  
14 development of the PRA using NEI 18-04 is a PRA logic  
15 model that addresses all sources, all hazards, all  
16 plant operating states. And that is comprised of the  
17 full analysis of all scenarios, starting from  
18 initiator and ending with radiological consequences.  
19 That's all consistent with the scope of the non-LWR  
20 PRA standard.

21 However, when using the LMP methodology  
22 and two-step licensing process, it's understood the  
23 PRA will necessarily be something less than the  
24 optimal endpoints at the construction permit stage,  
25 given the maturity of preliminary design information.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           As such, it's important to establish the  
2 minimum needed for the acceptable PRA supporting an  
3 LMP-based construction permit application in order to  
4 help determine how the staff would make findings under  
5 10 CFR 50.35(a) and other related construction permit  
6 regulations.

7           So the subject of this guidance is, this  
8 is developed in Appendix B to DG-1404, Revision 1.

9           CHAIR PETTI: So I had a, just a high-  
10 level question, and maybe you'll get to it in later  
11 slides. Because it was really hard for me when I read  
12 Appendix B to figure out if the PRA that, let's call  
13 it the P-PRA, like the PSAR, right. And then there's  
14 an FSAR and an FPRA, to keep it simple.

15           That the information that you're  
16 requesting at the CP stage is commensurate with the  
17 state of the design. What it looked to me like is  
18 that you went into the PRA standard and kind of just  
19 binned the requirements. Do I need them at the CP  
20 stage, do I need them at the final, the OL stage.

21           What I didn't see was any sort of  
22 discussion about why is that requirement, you know,  
23 why can you put that in the CP bucket, as opposed to  
24 the F bucket?

25           I mean, did you guys do something where

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 you convinced yourself that there would be the right  
2 information at the CP stage? So you weren't over-  
3 asking.

4 That's what I was -- I couldn't get a  
5 sense of that.

6 MR. GILBERTSON: Yes, we did perform that  
7 process. I will talk about that in a couple of  
8 slides, so, yes. If you are happy to -- Yes, I'll  
9 wait till we get to there.

10 CHAIR PETTI: Okay.

11 MR. GILBERTSON: Okay. So we are on Slide  
12 16. Okay. So this is a good diagram to show. This  
13 is relevant to some of the discussions we've already  
14 had.

15 Like I mentioned, given the prominent role  
16 of the PRA and the LMP methodology, much of the  
17 information in Chapters 1 through 8 of the SAR  
18 dictated by TICAP are either directly or indirectly  
19 related to or derived from the PRA in one way or  
20 another.

21 So because the TICAP dictates a new  
22 structure through the SAR different from the SRP we  
23 developed a sort of, we call this affectionately our  
24 "Where is Waldo" map, if you will, graphic to help us  
25 understand where the risk information and PRA-related

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 information can be found in the first eight chapters  
2 of the SAR.

3 So we have already been talking about more  
4 generally where other information can be found, but  
5 this was focused primarily on PRA information and was  
6 a graphic that the staff showed at some earlier public  
7 interactions on development of this guidance. Member  
8 Martin?

9 MEMBER MARTIN: I wanted to comment on  
10 this. I have always had a problem with the shuffle of  
11 the deck and you've got to pick your battles, right.

12 I've already identified one, so -- so I  
13 have rationalized that the first four chapters, all  
14 right, that's the analysis, right, but once you get  
15 into, you know, three, four, you incorporated content  
16 and understanding of a safety function, line criteria,  
17 safety classification.

18 Designs go through design cycle.  
19 Invariably these things get considered. You really --  
20 well, following DOE's, you know, process and other  
21 processes, and I'm sure there are others, your safety  
22 classification comes after your hazard though, so it  
23 comes very, very early on and through the cycle, of  
24 course, you iterate.

25 If you had not put that arrow between

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 three and five and just left it at that I probably  
2 wouldn't have even spoke up, but I think it  
3 communicates the wrong thing here because you cannot  
4 get to three and four without already having gone to  
5 five, six, seven, and eight, even though we could all  
6 say, well, it's done in conceptual preliminary design.

7 Those things factor because your design  
8 has -- There has already been assumptions on how it's  
9 going to solve certain safety concerns and  
10 incorporating, you know, you might say, you know, you  
11 want to get away from deterministic as a word, but  
12 deterministic design is a thing.

13 We do single failure analysis,  
14 vulnerability, we design for diversity and redundancy.  
15 That is our practice and, of course, you don't want to  
16 go that way.

17 Maybe in the spirit of, you know, risk-  
18 informed and PRA in some elegant manner, you know, you  
19 want to say it just falls out of, you know, the  
20 function of form, exercise, design. The engineering  
21 of a design that captures five, six, seven, and eight  
22 and gets that into your licensing basis, that matters.

23 So I wanted to ignore it and just say, all  
24 right, one, two, three, four, that's your op-level  
25 safety analysis and everything is in the appendix, you

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 know, or you do it the other way around and you put  
2 five, six, seven, eight and all that and then you put  
3 your license, you know, all the other stuff in the  
4 back, but the top of the deck is less of a, you have  
5 less passion for.

6 I worry that there is this idea that  
7 things just fall out of, you know, the design process  
8 and I just distinguish design and engineering as two  
9 separate things.

10 You design for form and function and you  
11 engineer for a purpose. Five, six, seven, and eight  
12 is your purpose that matter. Before that it is a  
13 design process.

14 So it confuses me outside of my one  
15 rationalization why it's ordered in this way because  
16 you cannot get to three and four without spending a  
17 lot of time in all the other chapters.

18 CHAIR PETTI: But, Bob, this is how the  
19 application goes. You're reflecting it off through  
20 the designer lens.

21 MEMBER MARTIN: I know.

22 CHAIR PETTI: The fact that iterates  
23 behind the scenes is really not the NRC's concern,  
24 right. I mean what I liked about this is that it  
25 allowed a focus.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           This is too much information that has to  
2 be presented and I would argue that the old content of  
3 application, the traditional way, it can be very  
4 opaque depending on how it's written and who writes it  
5 and that this would allow a greater safety focus to  
6 get you to what NRC really cares about.

7           We understand that it doesn't flow  
8 lineally in terms of how it's done. Behind the  
9 scenes, you're right, there's huge iterations, but how  
10 do you best present it so that the reviewer can get  
11 the information they need in the most efficient  
12 manner.

13           MEMBER MARTIN: Right.

14           CHAIR PETTI: And, okay, I am  
15 pontificating because it's in my draft letter, but I  
16 think this does this better than perhaps the  
17 historical approach.

18           MEMBER MARTIN: Sure.

19           CHAIR PETTI: So I understand, you know,  
20 your --

21           MEMBER MARTIN: Invariably though aren't  
22 you in say drafting the application in these chapters  
23 saying, all right, this decision was made because of  
24 something that you'll see discussed in Chapter 5, 6,  
25 or 7.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1                   When we talked about it the other day at  
2 the A&S conference and, you know, I was picking on the  
3 use of defense in depth and uncertainties and its role  
4 in addressing uncertainty, and I could go on, yes, but  
5 presenting defense in depth aspects of design and its  
6 addressing of various uncertainties and safety  
7 analysis and your answer was basically, oh, you know,  
8 you wanted to see, you know, the content in the  
9 discussion of the design that addressed the safety  
10 issue and I said, well, you know, oftentimes you begin  
11 with the analysis and then you have to then go the  
12 other direction, you know, from the analysis into  
13 design.

14                   It seems like the design discussion is  
15 getting pushed back. Like I said, maybe I could live  
16 with it if that line wasn't there and that when you  
17 have --

18                   (Simultaneous speaking.)

19                   CHAIR PETTI: Well, again, that line is  
20 not there in the application. That's a graphic.

21                   MEMBER MARTIN: That is a graphic, but in  
22 the write-up for section, you know, three and four and  
23 probably in the other ones it's invariably going to  
24 say, you know, look at Chapter 3, or Chapter 5,  
25 Section such and such for, you know, more information

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 or, you know, and on and on and on.

2 There is going to be a lot of cross  
3 reference, or there should be a lot of cross  
4 reference.

5 CHAIR PETTI: I think of it as kind of an  
6 unfolding, right, like a fault tree, right, you're  
7 coming down and you're into three, okay, and then  
8 you've got to, there is going to be a path that's  
9 going to take you into five and six or into seven and  
10 eight as it unfolds and it has more detail.

11 I mean, yes, to put it all in one chapter  
12 would be horrendous, so --

13 MEMBER HALNON: Dave, your point, this is  
14 not the design process. This is the location of  
15 information in the SAR.

16 MEMBER MARTIN: Thanks.

17 MEMBER HALNON: So I agree with you. I am  
18 sitting close to him so he can slap me, but it worked  
19 for me because I can see where if I had a licensing  
20 basis event and I wanted to see how the systems were  
21 going to work it I would go to the right and not  
22 iterate back, so --

23 MEMBER MARTIN: So I come with a  
24 deterministic link here. From the standpoint of your  
25 PRA it lays out, but once you go to the step of doing

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 your licensing events, identify your AOOs and DBEs and  
2 beyond design basis, et cetera.

3 You have brought in, you know, more of,  
4 you know, more of the deterministic thinking that  
5 shapes the safety case or that aspect of the safety  
6 case and that is the guardrails that are your safety  
7 class SSEs and your design criteria.

8 You've shaped it, because, of course, it  
9 appears, you know, through that interim process. I  
10 find it would be confusing. Again, without that line  
11 there and thinking five, six, and everything else is  
12 an appendix, I would know as a professional, you know,  
13 that in an AOO the basis for, you know, whatever, you  
14 know, whatever event that you put in there probably  
15 has been influenced by the statements that probably  
16 appear somewhere else in the SAR related to safety  
17 classification, et cetera, et cetera, et cetera.

18 But if I am a reviewer it would be really  
19 hard to pull a thread, you know. So I just see it,  
20 you know, again, bias on the deterministic side of,  
21 you know, my experience.

22 I do find a lot of value, a lot of value,  
23 in the tool sets that, you know, the risk-informed  
24 performance-based approaches offer, but I really see  
25 there is more about the synergy of the two that's

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 going to be effective and ultimately expedite, you  
2 know, progress with the new reactor.

3 Yes, I am getting philosophical, but like  
4 I said I think what's going, what you will want to  
5 have, you want to have a lot of cross reference here  
6 to understand, but I don't see how three and four  
7 happen without all the other ones, which is why you  
8 have Chapter 15 and Chapter 19 where they sit, you  
9 know, they come at the end.

10 It's safety analysis, you know, and Part  
11 50 and Part 52 has been a design verification  
12 activity, right. We present chapters, you know, you  
13 address it by the critical safety function, right, or  
14 at least the barriers, the fission product barriers,  
15 right.

16 You have your payment, you know, 2.3, you  
17 have fuel, four, RCS, five, you know, engineering is  
18 Function 6, I&C, you know, I can, I'll say testing,  
19 but I don't remember all these sort of things, but you  
20 get the whole design story up front with the old model  
21 and then, of course, then you lead into 15 with safety  
22 and tech specs, you know, 16 which naturally follows  
23 from that, and then 19 covers all the -- of course, it  
24 was after the fact, you know, in the history of this  
25 thing. It lays out in a very deterministic world --

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MS. CUBBAGE: Bob, this is Amy Cabbage,  
2 NRC staff. I work for Steve Lynch. I would just like  
3 to reiterate that, you know, the staff is going to do  
4 a holistic team approach to this review.

5 We are not going to be diving up these  
6 little piece parts, so the team is going to be looking  
7 holistically at the whole application and not little  
8 pieces at one time.

9 I do think in the interest of time we  
10 probably do need to move on because these issues have  
11 previously been adjudicated before the ACRS and we  
12 need to get to the resolution of comments.

13 MEMBER MARTIN: Doesn't a statement like  
14 that kind of short circuit the independent role of the  
15 ACRS? Anyway --

16 (Simultaneous speaking.)

17 MS. CUBBAGE: I mean feel free to keep  
18 discussing it, I am just looking at the time.

19 MEMBER MARTIN: I appreciate that comment,  
20 but, like I said, it's a secondary issue for me but I  
21 do think it does create misconception about where  
22 things are in the process. I think it's important to  
23 the staff on the review of these things.

24 So I appreciate what you're saying. If  
25 you are all professionals and you all have, you know,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 30 years' experience it won't be a problem, but the  
2 reality is you don't have that.

3 CHAIR PETTI: I'm sure they cross, Rob,  
4 the old application of contents against this to make  
5 sure everything is covered from a completeness  
6 perspective.

7 MEMBER MARTIN: I won't say it's not  
8 covered, it's just that it doesn't flow.

9 CHAIR PETTI: It's in a different way.

10 MEMBER MARTIN: It just doesn't flow.

11 CHAIR PETTI: Well it doesn't flow in your  
12 sense, but from an LMP sense I look at this and go I  
13 understand why it is the way it is --

14 (Simultaneous speaking.)

15 MEMBER MARTIN: -- of the reactors that  
16 have been produced and gone the old way, so, I don't  
17 know.

18 CHAIR PETTI: And we have two going this  
19 way.

20 MEMBER REMPE: Safety-related SCCs do flow  
21 out of the analysis with LBE, the old GA way is where  
22 I was coming from. I have a different question, to  
23 change the subject, which maybe might be good.

24 Anyhow, I am confused about the term of  
25 "fundamental safety functions" and "required safety

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 functions," and so I actually went back to the NEI  
2 document and to me it looks like the required safety  
3 functions are kind of like a subset of the fundamental  
4 safety functions. Is that your perception?

5 MR. GILBERTSON: Yes. I mean I think  
6 that's a way of looking at it. It's these are, the  
7 required safety functions are what are sort of  
8 materially implemented through the PRA to achieve this  
9 higher level fundamental safety function.

10 MEMBER REMPE: So if I am a reviewer is  
11 there some sort of guidance that says for every  
12 fundamental safety function there better be a required  
13 safety function, at least one or two that support that  
14 fundamental, because I was confused why you needed the  
15 two terms, but, okay, if NEI wants to do that that's  
16 fine, but it seems like from the NRC staff's  
17 perception you ought to be cross checking to make sure  
18 that there is consistency because it's kind of  
19 puzzling.

20 If it's a fundamental safety function it  
21 seems like it ought to be required, too, you know, or  
22 vice versa. I don't know, it was kind of interesting  
23 that it was kind of just skipped over like everybody  
24 should know and check to make sure.

25 MR. GILBERTSON: One way that I would look

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 at that personally is that I think maybe the  
2 fundamental safety functions are more to address the  
3 entire spectrum of the design process.

4 So it's that notion that you are starting  
5 from the conceptual aspects of the design and the  
6 facility. So the clean sheet respected, I have to do  
7 these things, these fundamental safety functions,  
8 contain, cool, and control.

9 MEMBER REMPE: There also ought to be  
10 control chemical reactions, not just reactivity  
11 control. That's again -- I guess I'm hung up on that  
12 topic and all.

13 There is not a list, so you're kind of  
14 telling me, oh, fundamental safety functions are  
15 everything we always need to think about but you have  
16 limited it to the traditional four --

17 MR. GILBERTSON: Right.

18 MEMBER REMPE: -- not things that might  
19 come up with non-LWRs. So, again, I just want to make  
20 sure that, it seems to me that the designer can say,  
21 oh, this doesn't apply to me, but maybe they need to  
22 have that list or has an analysis to keep up or  
23 something, but you're saying, oh, it's a higher level  
24 fundamental list that everybody must do.

25 I don't see that anywhere. I think that

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 the applicant gets to propose their critical safety  
2 functions or fundamental ones and then they have  
3 required safety functions to meet those fundamental  
4 ones.

5 MR. GILBERTSON: Yes.

6 MEMBER REMPE: So I think there needs to  
7 be a cross --

8 CHAIR PETTI: So what struck me when we  
9 have the X-Energy briefing is chemical reactivity,  
10 which has been in every HTGR sort of LMP thought  
11 process from the beginning, isn't one of their  
12 required safety functions.

13 That is because in their mind it is  
14 outside of the licensing basis, at least as they see  
15 it down to their cutoff frequency. So the fundamental  
16 may be sort of in the abstract and then they go  
17 through the process and if it falls below the cutoff  
18 frequency then I guess it's not a required a safety  
19 function. It surprised me because I didn't anticipate  
20 that.

21 MEMBER REMPE: The connection is not well  
22 documented and --

23 CHAIR PETTI: I didn't anticipate it.

24 MEMBER REMPE: -- so I think somebody  
25 needs to write something down to say, you know, what

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 is expected here and how to coordinate, and I didn't  
2 see that.

3 Maybe it's there and I missed it. There  
4 was a lot of material we were supposed to read for  
5 this meeting.

6 MR. GILBERTSON: Okay. That's -- We  
7 appreciate the point, really constructive, and I will  
8 take that back.

9 MEMBER REMPE: Thank you.

10 MEMBER KIRCHNER: Anders, just a minor  
11 point, I find that your color coding is somewhat  
12 confusing and I'm not sure it adds a lot of value to  
13 this.

14 I am looking at it, like source term,  
15 description of the PRA, well the source term doesn't  
16 come out of the PRA. That's a quasi-deterministic  
17 derived source of fission products, et cetera, et  
18 cetera, or it comes out of, you know, a MELCOR  
19 calculation or however you choose to define the source  
20 term.

21 So saying that's a part of the description  
22 of the PRA seems to me -- It's a minor point, but, you  
23 know, the results of the PRA, well, to me the results  
24 of the PRA are not just the LBE summary but things  
25 like beyond design basis accidents and so on and

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 events.

2 I don't know. So if there is some intent  
3 to that color coding I've lost the bubble, but that's  
4 a minor point.

5 MR. GILBERTSON: Okay. Yes, as far as the  
6 source term is concerned I think, I mean I would  
7 relate that more to the mechanistic source term  
8 aspects of the PRA.

9 MEMBER KIRCHNER: Yes.

10 MR. GILBERTSON: So at which, you know,  
11 there is a whole set of analysis and requirements, so  
12 I think that's why we designated it in that regard.  
13 Okay.

14 Okay, so moving on. So just to kind of  
15 get back to the overall point. This diagram was meant  
16 to assist the staff and starting to lay this out.  
17 It's a bit of a -- I wouldn't say this is a final sort  
18 of set in concrete, you know, characterization of  
19 these items, but at least it served to facilitate  
20 discussions earlier in that process and really it was  
21 also to help us just organize our thinking and how we  
22 were developing the guidance.

23 Okay, Slide 17, please. Okay, so along  
24 the same lines, this diagram was sort of very much the  
25 same function. This was a diagram that we had

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 developed where we wanted to really get a high-level  
2 view of the overall implementation of the LMP  
3 methodology as it relates to the two-stage licensing  
4 process under Part 50.

5 Again, this helps, you know, organize the  
6 staff's thinking about what is needed for the  
7 minimally acceptable PRA for the construction permit  
8 stage and how that is informed by the LMP methodology.

9 And like it's been discussed before, the  
10 LMP methodology is very iterative and so there are  
11 feedback loops, aspects of those feedback loops that  
12 are not necessarily represented here, but, again, this  
13 is a much higher level overview.

14 One of the main sorts, or takeaways I  
15 guess you could say from this diagram was helping the  
16 staff to understand the substance of boxes "golf" and  
17 "hotel" and those relate to the items that we would  
18 expect to see in the construction permit application  
19 and generally what might go along with the issuance of  
20 the construction permit itself as a matter, again, of  
21 understanding what does the PRA need to do,  
22 understanding that LMP is a PRA-lead approach, and  
23 that the information at the construction permit stage  
24 is preliminary in nature. Okay, Slide 18.

25 MEMBER KIRCHNER: Anders, before you go

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 on, just quickly, I am trying to implement your  
2 guidance here based on the viewgraphs. Maybe that's  
3 not the right way to do it, but it's a nice diagram  
4 that you've put up.

5 Why wouldn't you have a description of the  
6 PRA in the CP issuance? I am just -- I am not trying  
7 to nitpick and do viewgraphs, but if indeed you  
8 fundamentally are building this on the PRA, you had a  
9 preliminary description of the PRA at the CP stage.  
10 I don't understand it.

11 MEMBER HALNON: That's the first bullet  
12 response. The first bullet in the description of the  
13 PRA and results.

14 MEMBER KIRCHNER: Right. I am misreading  
15 it. I'll get new glasses. I just need new glasses.  
16 Sorry, go on. Oh, I was looking at L versus --

17 MEMBER HALNON: It said CP application.  
18 That's G.

19 MEMBER KIRCHNER: Okay.

20 MEMBER HALNON: Raised at CP issuance.

21 MEMBER KIRCHNER: Yes.

22 MEMBER REMPE: Yes.

23 MEMBER KIRCHNER: Okay, go on. Go on,  
24 Anders.

25 (Simultaneous speaking.)

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MEMBER KIRCHNER: It's there. Thanks,  
2 yes.

3 MEMBER HALNON: You can read that?

4 MEMBER KIRCHNER: That I can read. Okay,  
5 thanks. Sorry, Anders.

6 MR. GILBERTSON: Okay. No, not a problem  
7 at all. Okay, so the next couple of slides I really  
8 just want to kind of hit on some of the key points of  
9 the guidance in DG-1404, Revision 1.

10 This really is going to more specifically  
11 relate to the guidance in Appendix Bravo because  
12 that's the new material since Revision 0 of DG-1404.

13 The first point I just wanted to focus on  
14 was that, you know, the guidance in DG-1404, Revision  
15 1, is meant to compliment the guidance in NEI-2107,  
16 Revision 1, to provide additional information on how  
17 to demonstrate the acceptability of this construction  
18 permit PRA.

19 It's not intended to increase the burden  
20 on or create any new requirements for the content of  
21 application. I will get into a little bit later as  
22 well as a matter of some of the comments in making  
23 this distinction between guidance on achieving the  
24 acceptability of the construction permit PRA and  
25 what's needed for the content of applications.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So the first point, major point, that I  
2 wanted to make is, again, the guidance in DG-1404,  
3 Revision 1, this is Appendix Bravo, it addresses all  
4 sources, all hazards, plant operating states, and  
5 those should all be addressed in the construction  
6 permit application like we showed in the previous  
7 diagram and they need to be dispositioned.

8           Now what we mean by that, dispositioned,  
9 is that it's one of the four items essentially shown  
10 in this sub-list here, sub-bullet list, it's either  
11 modeled directly after the PRA logic model, it's  
12 addressed via a screening analysis, so it's excluded  
13 from the PRA logic model with some justification, it's  
14 accounted for using risk-informed supplemental  
15 evaluations, or they are accounted for using design  
16 basis hazard levels for those hazards other than the  
17 internal events.

18           So that's what we mean as a matter of  
19 addressing what the scope of the construction permit  
20 application itself and how one might meet the  
21 requirements under 10 CFR 50.34(a), this is what we  
22 are thinking about as a matter of implementing the LMP  
23 methodology.

24           As far as the PRA logic model itself, the  
25 expectation is that to implement the LMP methodology

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 at a minimum that model needs to represent the  
2 internal events at power reactor PRA logic model  
3 because that is really what serves as the foundation  
4 of the overall PRA that would be developed for the  
5 further implementation of the LMP methodology.

6 Looking at this and setting this as our  
7 threshold, it was understood that this would help  
8 demonstrate the applicant's ability to develop an  
9 acceptable PRA logic model.

10 Again, it establishes this foundation upon  
11 which all of the other PRA models are expected to be  
12 built for all of the other hazards.

13 The last point here that I wanted to make  
14 is that having internal events at power for the  
15 reactor in your PRA logic model, that may be  
16 acceptable for what we are trying to achieve at the  
17 construction permit stage, but we want to note that  
18 only achieving that minimum scope for the PRA logic  
19 model there may be benefits of the LMP methodology  
20 that are not yet fully realized at that point.

21 So we recognize that, that there is a  
22 difference between those two objectives, but as a  
23 matter of understanding how the staff arrived at their  
24 findings for 50.35(a), this was the guidance and this  
25 was our purpose of developing this guidance so we can

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 provide this to applicants.

2 Slide 19, please. Okay, and the other  
3 points I just wanted to make are that the importance  
4 of performing a self-assessment for the PRA logic  
5 model, the screening analyses, and the risk-informed  
6 supplementary evaluations is quite high.

7 These, you know, performing the self-  
8 assessment helps reduce the need for an in-depth staff  
9 review of those items so that they can focus on the  
10 assumptions and other sources of uncertainty  
11 associated with those analyses.

12 Now a self-assessment does not need to be  
13 a peer review per se at the construction permit stage,  
14 we fully acknowledge that, but if a peer review were  
15 performed there is guidance in NEI 20-09 and that's  
16 been endorsed in Reg Guide 1.247 by the NRC staff.

17 So the overall point is that some sort of  
18 self-assessment would be highly beneficial for us to  
19 understand that there was essentially some sort of  
20 check on the applicant's work. Now --

21 DR. SCHULTZ: So how do you anticipate  
22 evaluating the peer review which in itself reviews a  
23 person's -- an external peer review?

24 MR. GILBERTSON: Okay. So --

25 DR. SCHULTZ: Because an organization has

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 just amazing PRA capability and they're going to be  
2 peer reviewed, or has it been done?

3 MR. GILBERTSON: So I think ultimately  
4 that is going to, that's going to be on a case-by-case  
5 basis. You know, a self-assessment can essentially be  
6 -- the applicant can define for themselves what their  
7 self-assessment is.

8 There is some guidance in NEI 20-09. That  
9 is really more set in the context of preparing for a  
10 peer review, so there are insights to be gained from  
11 that guidance probably, but we would be, you know,  
12 interested to know things about, you know, was there  
13 some sort independence associated with the self-  
14 assessment, for example.

15 DR. SCHULTZ: Yes. Do you anticipate to  
16 establish early on what that peer review is going to  
17 entail? In other words, you would not like to see an  
18 applicant come in and have you find that more peer  
19 review or a different review is going to be required.  
20 I think it should be established up front and how it's  
21 going to be done.

22 MR. GILBERTSON: Yes. I don't know that  
23 we are, that we were necessarily planning to do that.  
24 I think that understanding that at the construction  
25 permit stage it's one more aspect to help the staff

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 understand what they've done.

2 So if they -- that we would -- the staff  
3 would ask for more of a peer review or a more in-  
4 depth, I don't know that that is, that's really the  
5 ultimate purpose of the construction permit stage.

6 As a matter of helping the staff establish  
7 their confidence to make the 50.35 findings, looking  
8 at how an applicant has performed the LMP process and  
9 gaining confidence in their ability to perform that  
10 process versus, you know, how absolutely correct the  
11 answers may or may not be at the construction permit  
12 stage, that understanding of how it was done and our  
13 confidence in their ability to do it is perhaps a  
14 little more important to us.

15 So I think that's where the self-  
16 assessment helps to provide that confidence, but we're  
17 not -- I wouldn't see the staff as looking at that and  
18 making a judgement of, well, this was done  
19 incorrectly, your self-assessment that you propose, we  
20 don't think that's correct or that's, you know, it's  
21 what we received, it's a piece of information and we  
22 look at that to evaluate.

23 DR. SCHULTZ: That's fair. Thank you.

24 MR. GILBERTSON: Okay.

25 MEMBER KIRCHNER: Well, as Steve is

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 probing you on this, I think it's a good point.  
2 Because you don't want this to be a confident theme in  
3 the sense of how confident you are there are good PRA  
4 practitioners. You really want to have confidence in  
5 the design. And the PRA should flesh out important  
6 safety aspects of the design. I think Steve's point  
7 is a good one here.

8 DR. SCHULTZ: Well, you stated it right,  
9 Anders, what you want to is understand and validate  
10 the capability that's being performed. And obviously  
11 that has a lot to do with the results of the overall  
12 evaluation of the design. But given that the PRA is  
13 fundamental here --

14 MEMBER KIRCHNER: Right.

15 DR. SCHULTZ: -- it's really important to  
16 have all of those discussions early on in this as it  
17 can be. So it's the group of reviewers that are going  
18 to be engaged in the review process. Everyone has a  
19 good feeling about what's happening on both sides of  
20 this.

21 MEMBER KIRCHNER: Yes.

22 DR. SCHULTZ: -- both the applicant and  
23 the reviewers.

24 MR. GILBERTSON: And I think that's a fair  
25 point, something we can take back. I think developing

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 guidance for what the staff would look for in that  
2 self-assessment, that could be challenging for sure,  
3 understanding that we get close to a suggestion of  
4 what is correct or not correct.

5 I understand that the desire to get to  
6 that point, that offers certainty for sure. But  
7 that's a difficult point to get to, I think.

8 DR. SCHULTZ: I'm not so much interested  
9 in providing guidance, having the early on  
10 interactions --

11 MR. GILBERTSON: Okay.

12 DR. SCHULTZ: -- knowing that level of  
13 competency we spoke about.

14 MR. GILBERTSON: Yes, understood. Okay.

15 MEMBER REMPE: Just a little nit, one  
16 question that is helpful when I've looked at these  
17 things over the years is to say, can you tell me how  
18 the design changed based on your PRA and how the risk  
19 profile changed? I remember one of the applications  
20 we reviewed in the past that show how the risk profile  
21 was going down based on design changes.

22 And again, I worked for a company many,  
23 many years ago where I used to laugh about the  
24 transient design because of the PRA and all of it. So  
25 yes, those kind of questions ought to be probed. And

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 I don't know, it seems like something to think about.

2 MR. GILBERTSON: Understood, yes. And we  
3 have put some thought into that, understanding the  
4 iterative nature, how much we need to understand about  
5 how that was constructed but ultimately, you know,  
6 getting to the end point of what does that mean to  
7 inform how we're reviewing what they actually  
8 submitted, and as a matter of arriving at our finding.  
9 So yes, I agree that that's important.

10 There are any number of ways they could do  
11 it. Like we were talking about earlier, the LMP  
12 process is very iterative if you lay the processes,  
13 the three main processes side by side at the table.  
14 You try and map things across, and when somebody might  
15 be doing this, and then they're doing this, and  
16 jumping back and forth, what their starting point is.  
17 That is important to know. Obviously, at the end of  
18 the day we're looking at what they submit. Thank you.  
19 Okay.

20 MEMBER DIMITRIJEVIC: Sorry, I just want  
21 to add something important. You also have, you know,  
22 the requirement for acceptability of probabilistic  
23 risk assessment, you know, as defined now in Appendix  
24 A which is like an equivalent for your support of what  
25 is in Reg Guide 1247.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So there is a requirement for  
2           acceptability, the applicants have to prove that their  
3           PRA is acceptable, right. And now the only question  
4           for you is how do they do that. You know, how do they  
5           satisfy Appendix A of your, you know, 1253?

6           MR. GILBERTSON: Yes, I would agree with  
7           that, how do they do that? And beyond that, how do  
8           they implement that tool as part of their decision  
9           process in implementing LMP?

10           Okay. I'll go ahead and move on. So  
11           understanding -- so the outcome of following the  
12           guidance developed in Appendix Bravo to DG-1404,  
13           Revision 1, should be a preliminary, complete set of  
14           licensing-based events and SSC classifications  
15           provided in support of the construction permit  
16           application.

17           Now I just wanted to also note that  
18           completeness of these items relates to, again,  
19           consistency with the preliminary design information  
20           which may have varying degrees of maturity in the  
21           construction permit stage and will help inform, among  
22           other things, the applicant's determination of the  
23           risk metrics and comparisons with the QHOs.

24           And understanding that the PRA, at the  
25           construction permit stage, subsequently will continue

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 to mature leading up to the operating license stage,  
2 the guidance addresses the need to provide a plan for  
3 maintaining and upgrading the PRA during construction  
4 and finalization of the facility design.

5 So the staff, you know, gaining and  
6 understanding of how an applicant tends to do that is  
7 certainly important. And one of the examples here  
8 that we note is, for example, a seismic design basis  
9 hazard level that is ultimately to be replaced, or  
10 expected to be replaced with a seismic PRA at the  
11 operating license stage.

12 Understanding how they would make that  
13 transition as it relates to actually performing  
14 construction, when is the, for example, when is the  
15 PRA updated, what thresholds need to be crossed to  
16 require, in their minds, that the PRA be updated, that  
17 would be important for us to understand.

18 And of course, CP holders are always  
19 encouraged to keep the NRC staff advised of changes to  
20 the completion plan for the PRA that wouldn't be  
21 expected to significantly affect the design of the  
22 facility.

23 Slide 20, please. Okay, so now what we're  
24 here to discuss, the comments received in the staff's  
25 resolution thereof on DG-1404, as Rebecca previously

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 mentioned, the staff conducted two separate comment  
2 periods wherein 73 comments were received on Revision  
3 0, 30 comments were received on Revision 1 of DG-1404,  
4 and just a light was shown in that larger table on a  
5 previous slide.

6 The majority of the comments that were  
7 received were on the ARCAP and TICAP guidance  
8 documents. So again, that sort of impresses some of  
9 the greater interests in those documents.

10 So the next few slides, I'm going to  
11 provide a summary of just some of the notable comments  
12 and staff responses to those comments. Obviously the  
13 details of these comments and responses can be found  
14 in the documentation that was supplied in advance of  
15 this meeting.

16 The first item I wanted to talk about was  
17 removal of some clarifications and additions related  
18 to principal design criteria. So this was based on  
19 a comment noting that the staff position, c.6.a-1, it  
20 doesn't appear to provide any new guidance beyond  
21 what's in NEI 2107. And the staff agreed that there  
22 was some duplication. It's really the overall point of  
23 mentioning this.

24 And so in that example and other places we  
25 looked to find where we could eliminate some of that

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 duplication. And we found some places.

2 We removed a staff position addressing  
3 these risk informed performance based approaches other  
4 than the LMP methodology. This was based on a comment  
5 noting that the related staff position that was cited  
6 is not needed, because it's outside the scope of NEI  
7 2107, because NEI 2107 doesn't address non-LMP  
8 applications. So again, we agreed that was out of  
9 scope, really just wanted to focus on the LMP  
10 applications.

11 Slide 20, oh, 21. Sorry. Okay. So  
12 another, I guess, a series of comments that we  
13 received related to guidance for manufacturing  
14 licenses and standard design approvals. So this is --  
15 the comments noted that the guidance really only  
16 provides two options for demonstrating how a facility  
17 would meet certain construction permit regulations  
18 under Part 50.

19 So the staff acknowledged that the scope  
20 of NEI 2107 was just limited to COLs, combined  
21 licenses, design certifications, construction permits,  
22 and operating licenses. So accordingly, we revised  
23 Reg Guide 1.253 to remove the direct references to  
24 manufacturing licenses and standard design approvals  
25 processes.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           And, you know, so ML and SDA applicants  
2 are always encouraged to engage in pre-application  
3 interactions with the staff if they seek to use NEI  
4 2107, Provision 1.

5           Consistent with the staff's resolution of  
6 these comments, we did not adopt any of the  
7 recommended changes related to manufacturing  
8 licenses and SDAs.

9           Slide 22, please.

10           MEMBER DIMITRIJEVIC: This is the one  
11 thing that I didn't really understand. What is  
12 special about an SDA that they couldn't be included in  
13 this guidance? I mean, why there are exceptions?

14           MR. GILBERTSON: Joe?

15           MR. SEBROSKY: So the concern is, when you  
16 look at NEI 2107, it does not address manufacturing  
17 licenses and standard design approvals. So there's a  
18 gap there in that the underlying reg guide doesn't  
19 address manufacturing licenses and SDAs.

20           We were asked to provide additional  
21 guidance in the draft guide or in the reg guide when  
22 it comes to manufacturing licenses and SDAs. And we  
23 felt it was somewhat inappropriate to provide that  
24 guidance without the endorsement document, you know,  
25 2107, providing that information.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           We think there is a potential to revise,  
2           in the future, the guidance, both NEI 2107 and Reg  
3           Guide 1253, to include a discussion about  
4           manufacturing licenses and SDAs. For now, the thought  
5           is that if a manufacturing license, or an applicant,  
6           or an SDA applicant, wants to use the process, we urge  
7           them to come in and talk to us.

8           We believe at a high level that the  
9           design certification guidance is something that can  
10          be used to help with those pre-application  
11          discussions. So the short answer to your question is  
12          we didn't want to get out and fine 2107 for now.

13                   MEMBER DIMITRIJEVIC: Okay, understand,  
14                   thanks.

15                   MR. GILBERTSON: Okay. So Slide 22,  
16                   additional changes, we removed or we moved some of the  
17                   references to supporting guidance from Reg Guide  
18                   1.253 into the ARCAP roadmap ISG. This is based on  
19                   comments noting that informing to secondary  
20                   references, that is not directly related to the  
21                   endorsement of NEI 2107 and could substantially expand  
22                   the documentation needed in the SAR.

23                   So while we understand the point there,  
24                   and the references may be useful information, the  
25                   staff agreed they're not directly related to the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 endorsement of 2107. So since the ARCAP roadmap ISG  
2 already provides similar types of references, and is  
3 really the more appropriate document for that, that's  
4 why those references were moved over into that ISG.

5 Another notable change, the entirety of  
6 what was Appendix Alpha in DG-1404 was removed. So  
7 this was related to resolution of the previous item  
8 relating that the purpose of Appendix A in DG-1404,  
9 Version 1, essentially became obsolete.

10 So again, the references to documentation  
11 and guidance that's being developed was more  
12 appropriately put into the ARCAP roadmap ISG. And as  
13 a result of that, Appendix Bravo to DG-1404, Revision  
14 1, was promoted to Appendix Alpha in Reg Guide 1.253.

15 Slide 23, okay, so some changes resulting  
16 from comments on Revision 1, so again, this is really  
17 primarily going to relate to the guidance on PRA  
18 acceptability for the LMP-based construction permit  
19 applications.

20 The staff added language to indicate when  
21 a position relates either to achieving PRA  
22 acceptability, PSAR documentation on PRA  
23 acceptability, or archival documentation on PRA  
24 acceptability.

25 And this was in response to a comment

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 noting that the scope of the guidance in Appendix B,  
2 the DG-1404 was one, is inconsistent with the content  
3 of the scope of NEI 2107.

4 The staff considered this, and we  
5 acknowledge that there was a potential to create  
6 confusion regarding what needs to be done for the PSAR  
7 as it relates to PRA acceptability. And the guidance  
8 on PRA acceptability was not intended to convey any  
9 additional requirements on PSAR documentation that are  
10 already provided for NEI 2107.

11 To that point, the staff do consider that  
12 documentation needed to demonstrate the acceptability  
13 of the PRA and how PRA acceptability is achieved.  
14 Those two items are really intimately related in the  
15 same way that NEI 2107 addresses what is needed in the  
16 content of applications as well as how to develop that  
17 content.

18 So the next point, the staff revised  
19 Position Bravo.2.2 in Appendix B to DG-1404, Revision  
20 1 to align with language used in NEI 2107. And this  
21 relates to a comment that the proposed staff position  
22 regarding documenting key assumptions, that that  
23 should be deleted. Because it's not necessary and  
24 goes beyond NEI 2107.

25 So the staff included this position as a

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 matter of emphasizing guidance in NEI 2107, Revision  
2 1. And we ended up revising it to -- or we plan to  
3 revise it to state that such assumptions will be  
4 identified in the section of the SAR to which they  
5 apply.

6 So this staff position is meant to provide  
7 additional detail on identifying assumptions made in  
8 performing the PRA expected to be essential to the LMP  
9 -based safety analysis. And again, it's not to be  
10 construed as imposing additional requirements on the  
11 documentation of what are referred to as essential  
12 assumptions in the PSAR.

13 Additionally, the staff added some  
14 language to clarify the use of the term PRA. This was  
15 based on a comment expressing that the guidance  
16 contradicts itself regarding the use of this term. We  
17 saw that and recognized that there was some ambiguity  
18 there, and we rectified that.

19 And like a few slides ago, I think it's  
20 Slide 18, there was this box that I provided that sort  
21 of provides a little curly bracket showing those first  
22 three sub-bullet items. That's what we're generally  
23 referring to when we say the PRA. And that's  
24 consistent with how it's referred to in NEI 2107. And  
25 in cases where we specifically mean to refer to PRA

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 logic model, we've indicated as much in the guidance.

2 And then we reviewed some of the -- or the  
3 tables of applicability of supporting requirements,  
4 and we revised some of the designation for those  
5 supporting requirements. This was based on comments  
6 identifying that some of the designations potentially  
7 go beyond what can be accomplished at the construction  
8 permit stage.

9 So Member Petti, to your earlier question,  
10 the staff did provide -- or we performed the process  
11 in the PRA standard for identifying the applicability  
12 of supporting requirements that are tailored to your  
13 application. We did this with an understanding that  
14 we would expect to see a range of design maturities at  
15 the construction permit stage.

16 So while it's fair that one applicant or  
17 another may have more or less design maturity, and  
18 they may or may not be able to meet the requirements  
19 as we've designated them in the table, that's okay.

20 And the point was really more for those  
21 tables to just help facilitate, maybe do some of the  
22 legwork a little bit for applicants and say, look,  
23 this is where the staff are at right now. But this is  
24 not concrete, they're not acceptance criteria.  
25 They're not for conformance, or they're not required.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 Slide 24, please. Okay, so now I'll just  
2 go over some of the comments that resulted in no  
3 changes. Regarding not expanding the scope of the  
4 guidance to accommodate light water reactors, we  
5 received comments that the guidance in DG-1404 should  
6 be extended to LWRs because NEI 1804 and 2107 are  
7 technology-inclusive.

8 And we've touched on this a little bit  
9 earlier. Because of the nature of the PRA standard  
10 that is invoked through NEI 1804, and the fact that  
11 there is sort of a dichotomy between PRA standards for  
12 light water reactors and non-LWRs, we felt that it was  
13 appropriate to maintain our scope just looking at non-  
14 LWRs.

15 And of course, like Joe had mentioned  
16 earlier, LWR applicants that would seek to use the LMP  
17 methodology, they're always encouraged to discuss  
18 their plans with the staff so that we could understand  
19 how they might attempt to adopt the non-LWR PRA  
20 standard, if that were the case, or some other  
21 process, some other guidance documents.

22 Which it's notable that the LWR PRA  
23 standards, while they're not fully developed to  
24 address the same scope as the non-LWR PRA standards,  
25 they are in the process of completing that work and

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 will soon have that.

2 Let's see, okay, Slide 25, please. Okay,  
3 so finally, this will be my last slide. We received  
4 some comments that certain staff positions, the Bravo  
5 3.1.1 and 3.1.2 that relate to the risk metrics that  
6 should be determined, that this is already essentially  
7 covered in NEI 2107.

8 The staff chose to retain the staff  
9 position as it is, because of the potential for the  
10 language in NEI 2107 to be interpreted as only  
11 requiring perhaps a narrative description of the  
12 subject risk metrics.

13 So in that regard, the act of determining  
14 these risk metrics is meant to imply there's a broader  
15 set of information that should be provided about those  
16 risk metrics and that would be considered, such as  
17 preliminary quantitative or qualitative determinations  
18 of those values, of their risk metrics, as well as how  
19 they compare to the QHOs at the construction permit  
20 stage, and how they would meet the QHOs at the  
21 operating license stage.

22 The next point, regarding the meaning of  
23 addressing all sources, hazards, and plant operating  
24 states, we received a comment that, in part, indicates  
25 the idea that a PRA would address or include all

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 sources, hazards, and plant operating states is  
2 incorrect. Because some of the items may be screened  
3 out deterministically.

4 So the staff's response to this  
5 emphasizing, again, addressing all sources, hazards,  
6 and plant operating states, means identifying and  
7 somehow dispositioning them. So that includes  
8 potentially screening items out from inclusion in the  
9 PRA logic model. So we felt that was effectively  
10 already addressed in our guidance.

11 Regarding the notion that the LMP is risk  
12 informed, not risk-based, there was -- the same  
13 comment that I just referred to, it also talks about  
14 the LMP methodology being risk informed, not risk-  
15 based.

16 But together, there were a couple of other  
17 parts of the comment that, when you read it together,  
18 it can be construed to imply that addressing all  
19 sources, hazards, and plant operating states would  
20 make the LMP methodology risk-based somehow.

21 We wanted to -- we didn't make any changes  
22 to our guidance, but we offered a clarification on  
23 this in our response, that we disagreed with that  
24 characterization. LMP is never risk-based.

25 The PRA features heavily, but it is not a

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 primary tool for making decisions. There's always the  
2 other processes, especially for a defense in depth  
3 adequacy evaluation. So that's much more along the  
4 lines of a risk informed decision making process and  
5 consideration of many elements.

6 And then there was a comment that related  
7 to the staff's use of this phrase, full LMP  
8 implementation. So the comment expresses that the  
9 phrasing is inappropriate. There's no criteria for  
10 characterizing what full implementation of the LMP  
11 methodology means. And we do agree with that, there  
12 are no criteria.

13 However, the staff's purpose of using that  
14 phrase has emphasized that while the minimally  
15 acceptable PRA logic model described in the guidance  
16 may be acceptable for the construction permits  
17 application, like I mentioned before, there may be  
18 benefits of the LMP methodology that aren't being  
19 realized.

20 So it's really just an acknowledgment also  
21 that this sort of -- the optimized end point for the  
22 PRA logic model, as discussed in NEI 1804, is full  
23 scope, addressing all hazards, sources, and plant  
24 operating states.

25 And there was another comment that related

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 to the notion of meeting high level requirements,  
2 supporting requirements, and related staff positions  
3 on PRA acceptability. And the comment really just  
4 points out that the peer reviews generally don't  
5 involve meeting specifically the high level  
6 requirements from the consensus PRA standard.

7 The staff's response emphasizes that, as  
8 a matter of determining acceptability of the PRA, we'd  
9 look for whether the related staff positions are met,  
10 as in Reg Guide 1.247.

11 And those staff positions in Reg Guide  
12 1.247 are written to be analogous to the high level  
13 requirements in the ASME/ANS non-LWR PRA standard  
14 which is, of course, only one way to meet the staff  
15 positions. And so the high level requirements in the  
16 standard are effectively met by virtue of meeting the  
17 underlying supporting requirements for them.

18 And finally, there were some scopes that  
19 the staff deemed to be out of -- some comments, I'm  
20 sorry, that were deemed to be out of scope. And these  
21 included a request to develop tables for light-water  
22 reactors analogous to the supporting requirement  
23 applicability tables. So that's clearly out of scope,  
24 but the staff did take that for broader internal  
25 deliberation.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           And again, another comment making the  
2 guidance applicable to LWRs in general, there was a  
3 request for an extension to the comment period and  
4 another comment that related to the use and  
5 endorsement of consensus codes and standards as it  
6 relates to legal requirements.

7           So again, the details of all of that are  
8 provided in the documentation. So with that, that  
9 concludes my portion of the presentation. And I will  
10 hand it off to Joe Sebrosky.

11           CHAIR PETTI: At this point, we need to  
12 have our break. So I propose that we take a 15-minute  
13 break and go into recess. We're going to have to move  
14 faster. We only have -- so, ten minutes, 10:45.

15           MR. SEBROSKY: When we did the dry run on  
16 this, it was about two minutes per slide on the TICAP.  
17 It's about one minute per slide on the ARCAP. So it  
18 should go ---

19           CHAIR PETTI: We're hoping the ARCAP will  
20 go faster, yes, based on that.

21           (Whereupon, the above-entitled matter went  
22 off the record at 10:34 a.m. and resumed at 10:45  
23 a.m.)

24           CHAIR PETTI: Okay, we're back in session,  
25 folks, 10:45. Joe, it's yours.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MR. SEBROSKY: My name again is Joe  
2 Sebrosky. I work in the Advanced Reactor Policy  
3 Branch. So the purpose of this portion of the  
4 presentation is to provide a high level overview of  
5 the nine ARCAP ISGs, and also discuss the comments  
6 that we received that led to changes in the document  
7 and comments that we received that we determined that  
8 a change was not needed.

9 This slide is consistent with a previous  
10 slide that Rebecca showed. If you look to the right  
11 where it says additional portions of the application,  
12 I know it's kind of an eye chart, but the reason I  
13 brought it up is this is essentially the table of  
14 contents for the ARCAP Roadmap ISG.

15 So you would see the first full chapters  
16 of the SAR with pointers to various ISGs. And then  
17 after the SAR discussion, the first full chapters of  
18 the SAR, the first thing you're going to see is tech  
19 specs, technical specification or guidance, which is  
20 going to point to an ISG. But the flow of this is  
21 consistent with the flow in the ARCAP roadmap ISG.

22 The other thing I wanted to mention that's  
23 in this slide is there's four appendices that are in  
24 the ARCAP roadmap ISG, Appendix A, Alpha, which is the  
25 pre-application guidance. This is something that was

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 previously included in the ARCAP roadmap ISG that we  
2 previously briefed the committee on.

3 There have been some adjustments as a  
4 result of both management and our legal reviews, and  
5 also as a result of the comments that we received.  
6 But the main portion of the document is something that  
7 was previously briefed to the ACRS.

8 Applicability of regulations to non-light  
9 water reactors, this Appendix Bravo, the last time we  
10 briefed the ACRS we only referenced a white paper. We  
11 had a place holder for Appendix Bravo. And we  
12 essentially said that we intend to take the white  
13 paper that was publicly available and place it in  
14 Appendix Bravo. So if you compare the white paper to  
15 what's in Appendix Bravo, there's not many changes.  
16 But it is a new appendix from what we previously  
17 briefed the ACRS on.

18 Appendix Charlie, the construction permit  
19 guidance, that was included in the previous document  
20 that we briefed the ACRS on.

21 Appendix Delta is new. It's the draft  
22 documents under development that may lead to future  
23 changes to the guidance documents. That's where  
24 you'll find a reference to DG-1413 that we talked  
25 about earlier.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So this slide went into the ARCAP roadmap  
2           comments. There were 68 comments that were received.  
3           It represents the second-most comments that we  
4           received, as Anders mentioned, the ARCAP roadmap ISG  
5           and the TICAP Reg Guide or foundational documents. So  
6           it's expected, it wasn't a surprise to us that this  
7           received the second-most comments.

8           Changes that were made because of the  
9           comments, we expanded the applicability of Appendix B  
10          to manufacturing license applications. So it  
11          previously talked about the requirements for design  
12          certs, as an example, combined licenses. But it left  
13          out, in some of the tables, manufacturing licenses.  
14          As a result of the comment, we added applicability of  
15          regulations for manufacturing license, non-light water  
16          applications.

17          We deleted a reference to the Facility  
18          Safety Program. That is not a requirement in 10 CFR  
19          Part 50 or 52. It was a placeholder for guidance for  
20          10 CFR Part 53 which has, in the proposed rule, a  
21          Facility Safety Program. We removed it. We believe  
22          it's premature at this time. We're waiting for a  
23          Commission direction on 10 CFR Part 53.

24          We expanded the guidance on leaks from  
25          coolant systems to specifically address leaks from low

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 pressure systems. So when you look at the ARCAP  
2 roadmap ISG, it had references in it to high pressure  
3 leaks that you see from a standard review plan,  
4 Chapter 3.

5 One of the questions or the comments that  
6 we received was some of the non-light water reactor  
7 designs don't operate at high pressures. We need to  
8 provide guidance for low pressure systems.

9 So what you see in the guidance now is,  
10 you know, there's an expectation that, for such  
11 designs that are low pressure, environmental effects  
12 of fluid leaks on structure systems and components in  
13 the vicinity of the leak should consider factors such  
14 as fluid temperatures, corrosive effects,  
15 flammability, and radioactivity.

16 When it comes to principle design criteria  
17 the guidance for the principle design criteria was  
18 expanded to include a statement that each applicant is  
19 responsible for identifying the need for additional  
20 principle design criteria that are not informed by the  
21 LMP process. LMP process is for off normal  
22 conditions. There's principle design criteria  
23 associated with things like normal effluence that  
24 wouldn't come from the LMP process.

25 In this slide, we added a discussion on

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 operational programs. There was additional guidance  
2 that was provided to supplement the guidance  
3 associated with plant programs that are derived from  
4 the Licensing Modernization Project. So you'll see in  
5 the diagram that Rebecca showed earlier, that Chapter  
6 8 includes plant programs that are relied on to  
7 support the LMP outcome.

8 What we did as a result of the comment is  
9 we provided additional guidance that applicants should  
10 review Appendix B of the ARCAP Roadmap ISG which is  
11 the applicability regulations. And if there are  
12 operational programs that are required because a  
13 particular regulation is applicable, and it's not  
14 picked up by the LMP, the expectation is that  
15 applicant would identify those.

16 Several items, as Anders mentioned  
17 earlier, several items were transferred from the TICAP  
18 regulatory guide to the ARCAP Roadmap ISG, because  
19 they're not part of the LMP process. For example,  
20 consideration of generic safety issues was an  
21 expectation that that be provided in the SAR. Our  
22 discussions are that's not something that the LMP  
23 would pick up. So we moved it out of the TICAP  
24 guidance and the ARCAP guidance.

25 (Audio interference.)

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MR. SEBROSKY: Okay, sorry. Is this any  
2 better?

3 Okay. So that's the discussion of the  
4 changes that we made to the document as a result of  
5 comments that we received. Requested changes that  
6 were not incorporated we talk about on this slide and  
7 the next slide.

8 The staff did not add a statement that  
9 consensus codes and standards take precedence over the  
10 regulations. The NRC has not adopted a process for  
11 automatic endorsement of consensus codes and standards  
12 as suggested by the comments that we received.

13 The staff did not remove the guidance that  
14 the design information related to items such as  
15 translation of design basis hazard levels to loads on  
16 structure, systems, and components and the evaluations  
17 of those loads be included in the SAR.

18 The NRC did not agree with the comment and  
19 believes that -- does not believe that it's sufficient  
20 for an applicant to simply identify the hazard for  
21 which design measures have been implemented as  
22 suggested by the comment.

23 Slide 30, additional discussion of  
24 comments that were not incorporated, we did receive a  
25 comment on the ARCAP Roadmap ISG to remove Chapter 11

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 in its entirety, because the commenter believes that  
2 the information is not needed to support an NRC staff  
3 finding of reasonable assurance of adequate  
4 protection. We did not agree with that.

5 The NRC did not agree with the expanding  
6 the guidance for all the ISGs for light water  
7 reactors. That's an issue that we all touched on, as  
8 Anders mentioned previously. So that's the ARCAP  
9 roadmap overview and discussion of the comments.

10 I'll move on to Chapter 2 which is site  
11 information. So the LMP process does not provide  
12 guidance on evaluation sites. So ARCAP ISG Chapter 2  
13 is very similar to the structure that you would find  
14 in SRP Chapter 2 for light water reactors. It  
15 provides guidance on the scope and approach for  
16 selecting the external hazards which must be  
17 considered.

18 The selection of the external hazards is  
19 to be informed by a probabilistic external hazard  
20 analysis when supported by available method status,  
21 standards, and guidance. So there's a discussion that  
22 if it is not supported, then a deterministic  
23 evaluation is appropriate.

24 Chapter 2 limits the amount of information  
25 that needs to be provided in the SAR to that necessary

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 to establish the design basis external hazards. If  
2 you look at SARs for operating reactors, you'll see  
3 that some of the key information in Chapter 2 is  
4 retained, but most of the information is labeled as  
5 historical, because it's only done once.

6 So there is an expectation that the  
7 information in Chapter 2 of the SAR will be limited in  
8 nature with the supporting information either  
9 submitted on the docket or available by audit  
10 (phonetic).

11 Chapter 2 refers to existing site  
12 evaluation guidance reg guides where appropriate. And  
13 it's fundamentally based on 10 CFR Part 100, Subpart  
14 B requirements. There were 12 comments received on  
15 Chapter 2.

16 Changes made because of the comments, we  
17 revised the frequency of occurrence of nearby  
18 industrial transportation material, military facility  
19 hazards to be considered in the design to be  
20 consistent with the existing guidance, and you will  
21 see it in redline strike out in the documents. There  
22 is a section that talks about -- that was removed that  
23 discusses event sequences of five in ten million  
24 initiating event frequencies.

25 We removed that and retained the guidance

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 that one in a million is appropriate if the data  
2 supports that, which gets to the second bullet to  
3 allow the use of a combination of probabilistic and  
4 deterministic methods to select external hazards.

5 There was a discussion in Section 2.6  
6 about the need to perform a comparative, competitive,  
7 process for information on slope stability. That was  
8 thought to be unnecessary and was eliminated as a  
9 result of the comment.

10 The requested changes that were not  
11 incorporated include the development of a standardized  
12 process for screening out external hazards. There is  
13 two guidance documents, one that's draft, and one  
14 that's finished as final, that do lay out a process  
15 for screening out external hazards.

16 The one that's been listed that has been  
17 issued as final is guidance on volcanic hazards.  
18 There's a discussion in there about how an applicant  
19 may be able to screen out volcanic hazards for its  
20 site.

21 And then in a draft guide for flooding  
22 hazard assessments, there's an Appendix K in the draft  
23 guide that discusses the process for potentially  
24 screening out a hazard, the flooding hazard. So in  
25 our comment we, comment resolution, we referenced

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 those two documents. But we did not adopt the  
2 standardized approach for all hazards.

3 The next --

4 MEMBER DIMITRIJEVIC: I'd like to just ask  
5 you about the Chapter 2. So on the parts of Chapter  
6 2, you know, that the methodology summarizes, because  
7 now chapter 2, it actually has everything in, you  
8 know, that will be put separately for comments?

9 MR. SEBROSKY: I'm sorry, I'm not sure I  
10 quite understand the comment. So there's a Chapter 2  
11 that comes out of the LMP process --

12 MEMBER DIMITRIJEVIC: Okay, so it's --

13 MR. SEBROSKY: -- and that's different.

14 (Simultaneous speaking.)

15 MEMBER DIMITRIJEVIC: -- Chapter 2 which  
16 is the SR, right?

17 MR. SEBROSKY: Yes. So there's a Chapter  
18 2, if you go back to the previous figure that Rebecca  
19 showed you'll see, coming out of NEI 2107, a  
20 designation of the chapters that are based on the LMP  
21 approach. And I think Chapter 2 is methodologies out  
22 of the LMP approach.

23 MEMBER DIMITRIJEVIC: Right.

24 MR. SEBROSKY: What we determined is we  
25 needed a chapter on site information, because the LMP

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 process does not address the site characterization.  
2 So Chapter 2 of the ISG is very consistent with  
3 Chapter 2 of the light water reactor standard review  
4 point. So if you look at Chapter 2 out of the LMP  
5 process, it's titled methodologies, and analysis, and  
6 site information.

7 MEMBER DIMITRIJEVIC: Right.

8 MR. SEBROSKY: But it doesn't -- you see  
9 that, if you went back to that slide, you'll see site  
10 information as an asterisk. And the asterisk points  
11 to ARCAP ISG Chapter 2. And I hope that makes sense.

12 MEMBER DIMITRIJEVIC: Well, I have to  
13 think about that again. So okay. All right, I can  
14 look at that differently.

15 MR. SEBROSKY: So the next chapter to talk  
16 about is Chapter 9. So when you look at the ISGs that  
17 we developed, for the most part they're outside of the  
18 LMP process. This is an example, Chapter 9, control  
19 of normal effluent site contamination and solid waste.

20 The LMP process is for off-normal  
21 conditions. So Chapter 9 is analogous. If you look  
22 at the light water reactors in the review plan you  
23 would see the same type of information in Chapter 11.  
24 We, for Chapter 9, applied a performance-based  
25 approach for the level of detailed information

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 provided in the SAR related to control of routine  
2 plant effluence, and plant contamination, and solid  
3 waste.

4 When it comes to changes that were made  
5 because of comments, we provided additional discussion  
6 for Chapter 9 on content for design certification,  
7 standard design approvals, and manufacturing licenses  
8 to identify the kinds and quantities of radioactive  
9 materials to be produced, and means for controlling  
10 and limiting radioactive effluence, and how the design  
11 will minimize contamination and control gaseous and  
12 liquid effluence produced during normal operations.  
13 So we added that discussion.

14 And we also provided a caveat that  
15 programmatic information may be addressed in the COL  
16 application and not addressed in design certs,  
17 standard design approvals, and manufacturing licenses.

18 The guidance also allows for an  
19 alternative approach for providing detailed system  
20 descriptions by requesting exemption requirements if  
21 it can be demonstrated that compliance with 10 CFR  
22 Part 20 can be established through a performance  
23 monitoring program.

24 Additional discussion was added on what  
25 information would be needed to support such an

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 exemption to confirm that the design features and  
2 programmatic controls effectively limit the release of  
3 radioactive effluents.

4 So when it comes to the changes that were  
5 not incorporated, these were all recommendations. So  
6 I believe the guidance, the commenter interpreted as  
7 related to Draft, Part 53. We believe it's clear that  
8 for now the ISG is for 1552 applications.

9 We did not delete the guidance directing  
10 applicants to provide a summary of estimated doses.  
11 We believe that's important. There was a comment to  
12 remove what was perceived to be prescriptiveness and  
13 only referenced industry standards. We do not agree  
14 with that comment.

15 And we did not remove references to the  
16 NEI template documents that the commenter suggested.  
17 We believe those NEI template documents that were  
18 approved by a SECY evaluation are important when  
19 considering development of the content for Chapter 9.

20 Chapter 10, similar to Chapter 9, is for  
21 normal operations. It provides guidance on  
22 occupational doses. Again, if you look for an  
23 analogous section in the SRP you would find this in  
24 Chapter 12 of the light water reactor standard review  
25 plan.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           For Chapter 10 it implies a performance-  
2 based approach for level of detail in the information  
3 provided in SAR. There were no changes that we made  
4 to the document because of comments. We only received  
5 two comments on the document, one of which requested  
6 that the guidance be expanded to include light water  
7 reactors which, again, we don't intend to do at this  
8 time.

9           The other comment included a statement,  
10 without requesting a change, that as low as reasonably  
11 achievable concepts would, from their perspective,  
12 they don't believe that was included in the guidance  
13 that we have in Chapter 10.

14           We believe it is. The NRC staff doesn't  
15 agree with the interpretation that Chapter 10 does not  
16 include an expectation that the design include as low  
17 as reasonably achievable. We believe it's pretty  
18 straight forward to us.

19           Chapter 11 on organization and human  
20 systems interaction, I'd like to turn it over to Jesse  
21 Seymour to go through these slides.

22           MR. SEYMOUR: Okay Thank you, Joe. My  
23 name is Jesse Seymour. And I am an operating  
24 licensing examiner, human factors, technical reviewer  
25 in the NRR Office of Licensing Human Factors Branch.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 I was one of the NRC staff that worked on the  
2 development of ARCAP Chapter 11 and more recently on  
3 the resolution of public comments, which I worked on  
4 in concert with Dr. David Desaulniers, who is our  
5 senior technical advisor for human factors in NRR.

6 I will be providing a brief overview of  
7 the scope of Chapter 11 along with the changes that  
8 we've made and related comments that we took into  
9 consideration.

10 Next slide, please. As an overview, ARCAP  
11 Chapter 11 draws upon the existing standard review  
12 plan where it's appropriate to do so. But where it is  
13 appropriate, it also adapts that guidance to make it  
14 technology inclusive versus it being light-water  
15 reactor centric.

16 A portion of Chapter 11 provides guidance  
17 regarding the construction and management of operating  
18 organizations in a manner that parallels that of NUREG  
19 800, Chapter 13, but in general it does so at a higher  
20 level that still covers a comparable scope in areas  
21 like staffing, training, qualifications across the  
22 organization.

23 There is also an underlying assumption  
24 that advanced non-light-water reactor applicants  
25 coming in under Parts 50 and 52 will need to navigate

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 applicability issues from some regulations while also  
2 needing exemptions from others. So this is addressed  
3 as relevance within the scope of those requirements.

4 A key example of this is licensed operator  
5 staffing where the exemption process of NUREG 1791 is  
6 explicitly called out.

7 Importantly though, there is no treatment  
8 of either remote or autonomous operations within this  
9 guidance. And in that sense Chapter 11 remains geared  
10 towards what we would typically consider to be more  
11 traditional concepts of operations, and those that we  
12 are more likely to encounter in the near-term.

13 Additionally, a number of lessons learned  
14 from recent staff experiences in both the Vogtle  
15 combined license and NuScale design certification are  
16 incorporated also. This includes staff takeaways  
17 concerning the cold licensing of operators under  
18 plants under design certifications, context and also  
19 COL context, and those are incorporated into the  
20 guidance.

21 Finally, the guidance also includes means  
22 for evaluating the adequacy of human factors  
23 considerations within an application as well as  
24 whether human factors engineering related post-TMI  
25 requirements have been appropriately addressed.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           Next slide, please.       We carefully  
2 considered the public comments that we received for  
3 Chapter 11 and coordinated with both INL and the  
4 Division of Advanced and Non-Power Reactor staff to  
5 disposition those.

6           In some cases, we determined that changes  
7 were warranted.    The changes made in response to  
8 comments included primarily adding references and  
9 clarifications for the areas that are, you know,  
10 summarized here on the slide.   So, again, pointing  
11 back to existing guidance that could be used within  
12 the existing SRP where it was appropriate to do so.  
13 Again, some of this is at the higher level  
14 organization for construction management in the  
15 operating organization, things that would typically  
16 hold true in a technology neutral manner and providing  
17 some additional regulatory clarifications there as  
18 well.

19           The changes made in response to comments,  
20 again, primarily referenced clarifications.   We  
21 determined that changes weren't warranted in response  
22 to the remaining comments beyond that.   And those are  
23 listed on the bottom out there.   And I will talk about  
24 that.

25           In general, we assess that the material in

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 question in some cases was already adequately clear.  
2 Where some comments were suggesting the removal of  
3 material, we assessed that removing the material  
4 wouldn't be consistent with fulfilling any needs to  
5 provide regulatory guidance. So, again, by taking  
6 some material out, you actually make things less clear  
7 and more difficult to navigate in our assessment or  
8 because separate processes already exist to address  
9 the given issue that was covered by comments. And I  
10 want to highlight that last bulleted item, in  
11 particular, which is in that vein.

12           Within the context of our proposed Part 53  
13 work, we did develop a revised approach to on-shift  
14 engineering expertise that offered some enhanced  
15 flexibility over the traditional shift technical  
16 advisor.

17           For the purposes of ARCAP, more broadly,  
18 Part 50 and 52 facilities, we have not engaged the  
19 Commission regarding any proposal to make generic  
20 changes to the existing shift technical advisor  
21 framework. However, that being said, on a case by  
22 case basis, Part 50 and 52 applicants and licensees  
23 could certainly propose different approaches to the  
24 shift technical advisor. And we would continue to  
25 consider those proposals on their individual merits.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           In some cases, this may involve the need  
2 for us to engage the Commission due to policy  
3 implications, as was the case with NuScale and the  
4 revised plant topical that we discussed before the  
5 committee a few years ago.

6           So, again, you know, that's a matter that  
7 we intend to continue to address on a case by case  
8 basis as it comes up within Parts 50 and 52. But we  
9 are not proposing any type of a generic modification  
10 to that traditional STA approach. And that's all  
11 within the context of that final comment that's there.

12           So I wanted to pause and just see if  
13 there's any questions before I turn it back over to  
14 Joe. Yes?

15           MEMBER BIER: Yeah. I do have a couple of  
16 quick questions or comments, one that's really more  
17 kind of editorial than substantive. In the discussion  
18 of the process for exemptions, there is kind of a  
19 heavy reliance on the NuScale example to illustrate  
20 that.

21           And, you know, if this document is still  
22 in effect 10 or 15 years from now, NuScale may not be  
23 top of mind for the people who are reading it. So I  
24 would just recommend that we change -- that that gets  
25 changed to say something like, you know, if you want

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 to have, you know, more reactors per operator or, you  
2 know, fewer people in the control room or whatever as  
3 concrete examples rather than you could do what  
4 NuScale did kind of.

5 So that's just an editorial suggestion  
6 that may, you know, help for clarity of the document.

7 The other question -- I mean, you  
8 mentioned that this is currently tied to 50 and 52,  
9 but that there is kind of some thought or what would  
10 happen if and when Part 53 is in effect. Have you  
11 thought about how generally licensed reactor operators  
12 would be covered here and would it be by exemption or  
13 would your revise the document to officially allow it  
14 or how would that be treated?

15 MR. SEYMOUR: So with regard to general  
16 licensed reactor operators, and this is a really  
17 fascinating, you know, discussion just from a kind of  
18 procedural standpoint, what we proposed within Part 53  
19 was to create a separate class of reactor facility  
20 where that would apply. And that was done largely for  
21 staff support reasons because under the Atomic Energy  
22 Act, you have to have uniform conditions of licensing  
23 operators across the various classes of reactors.

24 For the general licensed reactor operator,  
25 as the name would imply, it's a much different form of

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1       licensing, again, general. And when you compare that  
2       to the specific licensing that is used for ROs and  
3       SROs, it would be legally very challenging to try to  
4       create a carve-out that lives within Part 50, 52 and  
5       55, where that could exist.

6               Now that being said, and this is something  
7       that we've shared with, you know, stakeholders we have  
8       in the pre-application space, you can take a senior  
9       reactor operator, and you can request modifications  
10       via exemption to the licensing process into some of  
11       the scope of an existing senior reactor operator and  
12       still individually license them. And that flexibility  
13       is there.

14              You know, hypothetically, you could have  
15       a senior reactor operator power a reactor whose  
16       licensure and training program more closely resembles  
17       a research and test reactor. I mean, that's within  
18       the realm of possibility if, you know, the safety case  
19       was there for that, you know, again, their role in the  
20       fulfillment of safety.

21              So through our mechanisms that are there  
22       that are viable within 50 and 52 and 55, they get you  
23       almost the way there. But, again, you know, having  
24       that difference in licensing is difficult, unless you  
25       have a distinct class of reactor.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MEMBER BEIER: Thank you. That's helpful.

2 MR. SEYMOUR: If there's nothing else, I'm  
3 going to turn it over to Joe.

4 MR. SEBROSKY: Thanks, Jesse. And this is  
5 Joe Sebrosky. The next item to talk about is ARCAP  
6 ISG Chapter 12 on -- it should say post-manufacturing  
7 construction inspection testing and analysis program.

8 So Chapter 12, if you looked in the  
9 standard review plan for Part 52 applications, you  
10 would find this material in SRP Section 14. But the  
11 difference is for Chapter 12, it covers both  
12 construction permits and operating licenses as well as  
13 Part 52 concepts like ITAAC, inspection staff's  
14 analysis of acceptance criteria.

15 It's broken into two phases. So there is  
16 a Phase 1, which is pre-fuel load. And if you looked  
17 at the Part 50 construct, you would see that that  
18 covers up through the construction permit, but prior  
19 to the operating license. But Part 52 construct, it  
20 would go up to the fuel load or the 52.103(g) finding.  
21 And, again, the 52.0103(g) finding, if you  
22 demonstrated the ITAAC had been met under 10 CFR Part  
23 52, you could receive the fuel load.

24 So the construct of Chapter 12 as a Phase  
25 1 approach, which is prior to fuel load and then it

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 talks about the expectations for SAR content to cover  
2 that area and then post-fuel load, which includes  
3 after the operating license is issued or the 52.103(g)  
4 finding is made.

5 So the idea when you look at the pre-fuel  
6 load test program, that's expected to be discussed in  
7 the SAR. It would support the issuance of an  
8 operating license if the initial test program is  
9 unsatisfactory under 10 CFR Part 50 or the  
10 authorization load fuel SAR includes ITAAC.

11 The second bullet differentiates, as  
12 indicated, it differentiates between Part 52 and Part  
13 50 applications that aren't required to include ITAAC.

14 The third bullet just is a bullet that  
15 shows where the requirements that describe pre-  
16 operational testing can be found for both Part 50 and  
17 52. It provides guidance as I indicated earlier prior  
18 to fuel load and then provides guidance under Phase 2  
19 on what should be described in the SAR when it comes  
20 to initial start-up testing up to and including power  
21 accession testing.

22 MEMBER HALNON: So, Joe, before we get  
23 into the comments, I just had one as I was reading  
24 through this. I'm trying to go down the work of these  
25 reactors be placed in this world. And the thing that

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 it's a high probability that they will be placed in  
2 very harsh environments, either deserts or places that  
3 could be dark for two hours a day or those types of  
4 things.

5 I didn't see any real pointers to making sure  
6 that the mission, that the support system's heating,  
7 ventilation, lighting, those types of things critical  
8 to the mission of the operators and potentially  
9 security and other areas is looked at to make sure  
10 that where it is being placed is compatible with those  
11 support systems.

12 That was the only thing I could find that  
13 I really was wanting after all of these.

14 MR. SEBROSKY: I understand. So just to  
15 repeat back, the guidance to the extent that the  
16 reactor is placed in a harsh environment, we would  
17 want to see a test program that ensures prior to fuel  
18 load or after fuel load as part of the initial start-  
19 up testing that it's going to work in that harsh  
20 environment.

21 MEMBER HALNON: Yeah. The support systems  
22 are adequate for those areas that -- because a reactor  
23 in Central Ohio will be different than the support  
24 systems needed for Northern Alaska and taking a  
25 standard design and say I think I'm going to put it

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 from here to there may not be adequate. I know you  
2 see that other places in the application process in  
3 making sure support systems are able to support  
4 whatever safety functions they're doing.

5 But when I got through all of this, I  
6 thought about, well, how will those work? Is there  
7 enough lighting? Is there enough HVAC to support the  
8 mission? And I don't know if it has to be a test  
9 program or at least a mention that just ensure that  
10 the support systems are adequate for your testing,  
11 something to that effect.

12 So think about it. I'm not saying that  
13 it's a deficiency. I'm just saying that's what I felt  
14 like I was -- if I was a reviewer I would want to have  
15 some push to look at that portion of the plant.

16 MR. SEBROSKY: I understand. Thank you.  
17 So on this slide, Slide 45, the changes that we made  
18 because of the comments, we changed the title from  
19 post-construction to post-manufacturing and  
20 construction to reflect in some aspects of the initial  
21 test program and/or the ITAAC inspections test  
22 analysis and acceptance criteria could be completed at  
23 the manufacturing facility.

24 We clarified that the COL holder has the  
25 responsibility for verifying the completion of ITAAC

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 including verifying the ITAAC that were completed at  
2 the manufacturing facility have been maintained.

3 We clarified that for a construction  
4 permit application, the content of the initial test  
5 program descriptions can be limited in scope to the  
6 Phase 1 or pre-fuel load inspections testing and  
7 verification that would be required under 10 CFR Part  
8 50, Appendix B. Such content would include a  
9 description of the scope objectives and programmatic  
10 controls associated with the pre-operational test  
11 program.

12 We removed a reference to review committee  
13 and replaced it with guidance that the application  
14 should include a discussion for establishing a defined  
15 set of qualified operating and technical plant  
16 personnel to review, evaluate and disposition the  
17 inspections test and verification results.

18 The changes that were not incorporated  
19 included the staff disagreed that additional  
20 information regarding ISG Sections that applies to  
21 construction permits is needed because from the  
22 staff's perspective, we believe there is sufficient  
23 guidance for construction permit applications.

24 The next ISG to talk about -- so you'll  
25 see there are three ISGs that are outside the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 construct of the SAR. This one is one of them, in-  
2 service inspection, in-service testing. The next one  
3 I'll be talking about is an ISG on technical  
4 specifications and the last one, fire protection for  
5 operations.

6 So the ARCAP in-service inspection and in-  
7 service testing, ISG is based on the use of a plant  
8 specific PRA to identify the structures, systems, and  
9 components to be included in the programs.

10 The ISI guidance is based on the use of  
11 these two ASME Boiler Pressure Vessel Code sections  
12 that are provided on this slide in the sub-bullets,  
13 Section 11, Division 2, on the requirements for  
14 reliability and integrity management and then Section  
15 3, Division 5, for high temperature reactors.

16 The IST guidance is based on the existing  
17 in-service testing program approach with additional  
18 guidance for passive components and notes that ASME is  
19 developing a new OM-2 code for in-service testing of  
20 components in new and advanced reactors, including  
21 non-light-water reactors.

22 So one of the things that the IST  
23 discusses when it comes to passive components provides  
24 guidance for things like heat pipes that you don't see  
25 in the light-water reactor operating fleet. It again

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 uses plant specific risk information to determine the  
2 scope of the IST.

3 There were 43 comments received on the  
4 ISI/ISG so it's the third most comment we received on  
5 the documents.

6 So changes that were made because of  
7 comments we noted or we added that applicants can use  
8 ASME in QA1, quality assurance requirements for  
9 nuclear facility applications implementing Section XI,  
10 Division 2, guidance. This is consistent with the Reg  
11 Guide that was recently issued, Reg Guide 1.246, which  
12 endorses ASME Code Section XI, Division 2.

13 We allowed the use of unissued consensus  
14 codes at the construction permit stage provided they  
15 are officially issued prior to submitting the  
16 operating license application and provided design  
17 finality is not being requested on any portion of the  
18 design affected by the OM-2 codes. And we allow  
19 applicants for multi-module plants to provide standard  
20 ISI and ISG programs to each module without having to  
21 develop separate program approvals, provided the  
22 modules are identified.

23 MEMBER BALLINGER: This is Ron Ballinger.  
24 I think -- while this OM-2 code is being developed,  
25 there's another code call Fitness for Service-1, which

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 is an ASME extensive code, at least mention it.

2 MR. SEBROSKY: I understand the comment.  
3 I will take that back and talk to ISI and ISG folks in  
4 our group.

5 Of the requested changes that were not  
6 incorporated, the staff did not want to make a  
7 discussion of the process to be followed when the in-  
8 service inspection program identifies that degradation  
9 has occurred.

10 The NRC staff believes that the guidance  
11 in the ISG supplements, the guidance found in ASME  
12 Section X1, Division 2. The NRC staff disagreed with  
13 removing the discussion on passive components because  
14 the staff believes the topic is not specifically  
15 addressed by ASME and the topic is important for some  
16 of the designs like the heat pipe example that I  
17 provided earlier.

18 The NRC staff did not believe additional  
19 guidance for graphite and composite materials are  
20 needed to be included in the scope of the in-service  
21 inspection guidance because the staff believes that is  
22 an implicit part of the licensing modernization  
23 project process which should identify whether the  
24 graphite and certain materials in their design  
25 warrants an in-service inspection program.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So the next ISG to talk about is the one  
2           for technical specifications. The reason that we  
3           developed the ISG for technical specifications is when  
4           you look at the 5036 criteria for tech specs, it needs  
5           adaption to correlate to the analysis and output from  
6           the LMP-based approach described in 18-04.

7           So when you look at this guidance, you  
8           will see tables in it that talk about the requirement  
9           from 50.36. And then it maps it to the outcome from  
10          the LMP process.

11          The guidance also addresses content for  
12          the tech spec administrative control section and  
13          recommended tech spec format.

14          So changes that remain because of the  
15          comments, we added reference to NEI 18-04, the section  
16          that addresses risk metrics that are different from  
17          -- excuse me, core damage frequency and large early  
18          release frequency metrics for use in developing  
19          limiting conditions for operation and completion  
20          times. Molten salt fuel reactor or damage frequency  
21          doesn't mean much.

22          We added guidance for technical  
23          specification information. That should be included in  
24          the preliminary safety analysis report based on the  
25          requirements found in 10 CFR 5034(a)(5).

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           If you look at that requirement, there is  
2           an expectation that the probable subjects of technical  
3           specifications should be included in the PSAR with  
4           attention to information which may significantly  
5           influence the final design or form the basis for the  
6           preliminary limiting conditions for operations.

7           We added that discussion and exemption may  
8           be needed based on the correlation between the  
9           language in 50.36 to the analysis and outputs of the  
10          risk informed LMP approach.

11          The changes that were not incorporated,  
12          the staff did not revise the guidance -- revise Reg  
13          Guide 1.177 -- the title of that Reg Guide is Plan  
14          Specific Risk-Informed Decision-Making -- to align  
15          with NEI 18-04 risk metrics because the NRC staff  
16          believes the guidance in the technical specific ISG is  
17          sufficient at this time without having to revise that  
18          Reg Guide.

19          The staff noted in response to the comment  
20          that there are no near-term plans to revise 50.36 to  
21          include criteria from all of the factors. That's the  
22          technical specification.

23          This is the last ISG, and it's for fire  
24          protection for operations. So the reason fire  
25          protection for operations was developed is the LMP

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 process is expected to address fire protection for the  
2 design, but it doesn't. The LMP process is not going  
3 to include the programmatic controls.

4 So 10 CFR 50.48 requires each operating  
5 plant have a fire protection plan that meets the  
6 requirements of 10 CFR Part 50, Appendix A, Criteria  
7 3, for light-water reactors or the applicant's  
8 proposed design criteria that have been deemed  
9 acceptable by the NRC.

10 So we do expect the principal design  
11 criteria for non-light-water reactors that's analogous  
12 to the general design criteria, Appendix A, Criterion  
13 3.

14 When you look at the guidance that's in  
15 this ISG, it includes concepts from NFPA 805. NFPA  
16 805, which is included in Requirement 10 CFR 50.48(c)  
17 is not applicable to a non-light-water reactors. But  
18 we believe the concepts in NFPA 805 that are  
19 fundamentally a risk-informed approach are appropriate  
20 for guidance for non-light-water reactors.

21 The scope of the ISG addresses the review  
22 and application content regarding the fire protection  
23 program for operations, including application  
24 descriptions of the management and policy program  
25 direction and the integrated combination of procedures

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 of personnel that implement fire protection  
2 activities.

3 MEMBER HALNON: So a quick question, and  
4 correct me if I didn't read it correctly. But it  
5 appears the ISG makes an overall overriding assumption  
6 that there is a classic fire brigade available. Is  
7 that true?

8 MR. SEBROSKY: I believe that is the going  
9 in position.

10 MEMBER HALNON: Okay.

11 MR. SEBROSKY: There is the potential that  
12 a classic fire brigade may not be needed for some of  
13 the designs if it can be demonstrated that it is not  
14 necessary.

15 MEMBER HALNON: Yeah. So that branch,  
16 looking at a non-fire brigade plant may be incipient  
17 detection type relying on the offsite is -- it didn't  
18 seem to have a tie or a push to look that way in case.  
19 And I didn't know if there was something that I was  
20 missing.

21 We have already done one, I guess,  
22 perceived non-light-water type Part 50, and they  
23 didn't have a fire brigade. And they relied on  
24 offsite. So we had to go to the emergency plan and  
25 have it tied in the emergency plan to make sure that

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 the offsite was ready to fight fires onsite.

2 So that branch, tied to the emergency plan  
3 and the presumption that there's a fire brigade always  
4 didn't match up to me. So I would suggest maybe take  
5 a look at it and maybe figure some way to make sure  
6 that the reviewers first asking the question fire  
7 brigade, yes/no. If no, where do you go? If yes,  
8 then the rest of the ISG works great. And then the if  
9 no, we will need to have it tied to the emergency plan  
10 to follow that trail to make sure that everything is  
11 copacetic and covered.

12 MR. SEBROSKY: Thank you for the comment.  
13 So we received many comments on fire protection. As  
14 a result of the comments, the changes that you see  
15 here are editorial in nature. And this is a listing  
16 of the comments that were received that we did not  
17 incorporate.

18 Many of the comments requested deletion of  
19 guidance material, like removing references to general  
20 design criteria, deleting clarifying text regarding  
21 acceptability of NFPA 805. The staff provides a basis  
22 in the comment resolution tables for why such  
23 information is sought to be appropriate to be kept in  
24 the guidance document.

25 So this ends the presentation on the nine

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 ISGs. The next two slides are just acronyms and  
2 initial lists.

3 CHAIR PETTI: Thank you, Joe. At this  
4 point, given the late hour, we do have some public  
5 comments that I would like to take and then we can  
6 talk about the comments and next steps.

7 So if anyone has a public comment, please  
8 identify yourself and your comment.

9 I see Brandon. I can't read your last  
10 name easily.

11 MR. CHISHOLM: Yes, hello. And thank you  
12 for the opportunity to address the subcommittee. I am  
13 Brandon Chisholm of Southern Company. And today I am  
14 speaking on behalf of the industry-led TICAP team  
15 concerning the important guidance documents that have  
16 been discussed today.

17 So in particular, I highlight the  
18 technology inclusive content application project for  
19 the TCAP guidance document, that is NEI 21-07 and the  
20 NRC's draft Regulatory Guide DG-1404, Revision 1,  
21 which addresses it.

22 As you know, TICAP built on the licensing  
23 modernization project, or LMP, which is documented in  
24 NEI 18-04 and endorsed by the NRC in Reg Guide 1.233.  
25 Together NEI 18-04 and NEI 21-07 and the associated

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 NRC guidance documents form a workable basis for a  
2 risk-informed and performance-based advanced reactor  
3 license application that is submitted under the  
4 existing regulatory framework.

5 In fact, as discussed earlier today, both  
6 advanced reactor program, or ARDP, vendors, those  
7 being X-energy and TerraPower's Natrium, are among the  
8 multiple near-term applicants using LMP and TICAP for  
9 their applications.

10 Both LMP and TICAP were initiated by  
11 Southern Company on behalf of the industry and were  
12 carried out through cost share and supported by the  
13 Department of Energy's Office of Nuclear Energy.

14 There were many industry partners and  
15 participants playing key roles, including Idaho  
16 National Laboratory, the Nuclear Energy Institute,  
17 reactor vendors and private consultants.

18 Most importantly, the guidance was  
19 developed with extensive interaction with the Nuclear  
20 Regulatory Commission staff generally in public  
21 meetings. Perhaps the most significant example of  
22 such interaction was the inclusion of staff  
23 observation and multiple tabletop exercises to  
24 illustrate the application of the guidance on a  
25 variety of advanced reactor technologies during the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 development of NEI 21-07.

2 As evident from the discussion of the  
3 public comments today, industry and the NRC did not,  
4 and still do not, have complete alignment on every  
5 single point that is associated with the guidance.  
6 Nevertheless, all parties share the goal of developing  
7 a risk-informed and performance-based approach to  
8 regulation of advanced reactors that would provide a  
9 reasonable assurance of adequate protection of public  
10 health and safety and also be usable, transparent and  
11 implementable for all reactor technologies.

12 Through extensive cooperative efforts in  
13 full view of stakeholders and the public, we believe  
14 that the parties have overwhelmingly succeeded in  
15 achieving that goal.

16 One topic of conversation that I would  
17 like to make a quick note about is the documentation  
18 of hazard analysis in the safety analysis report.

19 As was mentioned, there are multiple  
20 requirements in the NEI 18-04 methodology, where  
21 analyses using tools like checklists, what if  
22 assessments, hazard and operability studies, failure  
23 modes and affect analyses and others would be used and  
24 incorporated into a risk-informed and performance-  
25 based process.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           Two such examples will be the requirements  
2 for hazard identification and screening in the non-LWR  
3 PRA standard and the comprehensive evaluation of  
4 defense-in-depth adequacy.

5           While the LMP and TICAP reflects the  
6 perspective offered by Member Martin, that hazard  
7 analysis is a key piece of understanding the safety  
8 and design of any system, I would just like to note  
9 that the requirement to explicitly document the  
10 results of the hazard analysis in the SAR will be a  
11 new and potentially unbounded requirement for an  
12 applicant.

13           However, as mentioned earlier, the hazard  
14 analysis documentation does exist in the documentation  
15 that supports the development of the SAR.

16           So to conclude my comments here today, the  
17 ARDP projects are continuing apace. It is of  
18 paramount importance to Southern Company as well as  
19 the mission of the industry-led and DOE supported  
20 project for the NRC to complete its guidance documents  
21 in an expeditious manner.

22           There are additional initiatives underway  
23 and plans to further develop the risk-informed  
24 performance-based advanced reactor regulatory  
25 framework by NEI 21-07 and the associated NRC guidance

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 documents need to be put in place as soon as possible.

2 We urge the ACRS to act promptly on DG-  
3 1404 and the associated Reg Guide 1.253 and the other  
4 ARCAP guidance documents. Thank you again. And  
5 that's the end of my comment.

6 CHAIR PETTI: Thank you. I see Benjamin  
7 Holtzman.

8 MR. HOLTZMAN: Yes. Thank you. Can you  
9 guys hear me okay?

10 CHAIR PETTI: Yes.

11 MR. HOLTZMAN: Okay. Thank you. This is  
12 Ben Holtzman from the Nuclear Energy Institute. I  
13 would echo a lot of what Brandon just said so I won't  
14 specifically do that. But I will encourage you as  
15 well to move forward as judiciously and expeditiously  
16 as possible in the finalization of these guidance  
17 documents.

18 Industry is very interested. And there  
19 are companies, as we've been discussing, who are  
20 planning on using them. And generally industry  
21 believes that the documents are very good. There's  
22 always room for improvement, of course, but these  
23 documents are a great step forward in terms of  
24 providing a predictable and usable regulatory  
25 guidance.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1                   And so I would just like to just again  
2 reiterate our support of not only industry, but NRC  
3 staff's efforts in the development of these guidance  
4 documents. Thank you very much.

5                   CHAIR PETTI: Thank you. Any other public  
6 comments? Any other comments? Okay. So, members,  
7 any broad comments? I've been taking notes so I've  
8 noted maybe two or three things that I can put into  
9 the letter.

10                   I want to thank the members who provided  
11 input. I've got good input from Matt and Greg and  
12 Vicki. And so I've got a pretty good draft together.  
13 And I will go and put some more -- sprinkle some of  
14 these comments I heard today in there.

15                   MEMBER HALNON: Dave, can I ask one more  
16 question of this panel?

17                   CHAIR PETTI: Mm-hmm. Sure.

18                   MEMBER HALNON: And I was just curious on  
19 the fire protection comments. I mean, they were  
20 probably made by very experienced fire protection  
21 industry folks. Is that why most of them -- all of  
22 them were rejected that they just didn't come in an  
23 informed set of comments? I mean, it struck me that  
24 100 percent of the comments were rejected.

25                   MR. SEBROSKY: The majority of the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 comments -- I'm trying to say this. A majority of the  
2 comments --

3 MEMBER HALNON: They were trying to get  
4 you to draw back on the guidance and requirements.

5 MR. SEBROSKY: Right.

6 MEMBER HALNON: I get that.

7 MR. SEBROSKY: So there was a particular  
8 individual that across the ISGs believed that we  
9 didn't need them. That we could rely on --

10 (Simultaneous speaking.)

11 MEMBER HALNON: That got reflected.

12 MR. SEBROSKY: And that person also  
13 provided multiple comments along those same lines for  
14 the fire protection.

15 MEMBER HALNON: Okay. So you say you have  
16 general fire protection staff in the industry so ISG.  
17 I don't want to speak for industry, but, I mean, from  
18 your perspective you feel relatively okay about --

19 MR. SEBROSKY: Yes.

20 MEMBER HALNON: Okay. That's fine.  
21 Thanks. I just wanted to -- I probably would have  
22 struck them too when we got them.

23 MR. SEBROSKY: Yes.

24 MEMBER HALNON: Okay. Thanks.

25 MEMBER BROWN: Yes. Just a question.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 Back in our prior discussion when we were going  
2 through all of this stuff in detail, comments were  
3 made relative to some of the documents that were  
4 referred to, like, in my areas, as a design review  
5 guy, for instance, issue a control that says for non-  
6 light-water reactors. And we talked about that guide  
7 because it was virtually identical in those  
8 circumstances to the one we developed for some of the  
9 past projects.

10 And we suggested that somehow it ought to  
11 not be known as just non-light-water reactors. I  
12 noticed when I went through it that the references to  
13 it still had parentheses as non-light-water reactors.  
14 And it came down to that there was a comment by  
15 somebody that said, hey, you didn't need it at all.  
16 You all said no. We took it out of, I think, the Reg  
17 Guide 1.253 or something and put it in a roadmap.

18 It's pretty sparse, the whole thing,  
19 relative to the INC world. So that's why I was  
20 interested in seeing what the perception was.

21 MR. SEBROSKY: Yes. So just to clarify  
22 and the I'm going to turn it over to Ian Jung. I was  
23 looking past you because Ian can help on this.

24 MEMBER BROWN: He's not going to yell at  
25 me, is he?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 MR. SEBROSKY: We believe that DRG is very  
2 important. The fact that we moved it from DG-1404 Reg  
3 Guide 1.2 (audio interference). I believe that the LMP  
4 process is found in the I21-07. And DG-1404 Reg Guide  
5 1253 is going to identify safety-related INC systems  
6 and non-safety-related special treatment INC systems.  
7 And when it comes to reviewing those INC systems that  
8 DRG is important.

9 I would turn it over to Ian to talk about  
10 the plans to broaden potentially applicability to  
11 light-water reactors.

12 MR. JUNG: Ian Jung again. The  
13 committee's recommendation to DRG related to light-  
14 water reactors led to a footnote within the DRG that  
15 the DRG design refuel guide for INC is technology  
16 inclusive from INC perspective so it can be used for  
17 light-water reactors.

18 MEMBER BROWN: So you did incorporate the  
19 thought process over which when you say it's a  
20 footnote?

21 MR. JUNG: Right. I mean, there was some  
22 negotiation on that. But in reality, actually just  
23 moved the light-water reactors, like BWXY. They are  
24 planning to use DRG as a guidance. They are engaged  
25 with light-water reactor divisions for INC. So

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 practically, the guidance is being used, and your  
2 emphasis on -- your committee's emphasis on  
3 fundamental INC design principles are cornerstones of  
4 those guidance. And I think those are going to be  
5 executed in all non-light-water reactor and light-  
6 water design as a safety focus.

7 MEMBER BROWN: I was just concerned that,  
8 you know, it has been obviously in a sense an issue of  
9 considerable discussion over the last 15 years of my  
10 participation. And that was kind of the crown jewel  
11 of bringing everything together as we moved through  
12 various projects. And then the DRG was developed, I  
13 think, it was for -- I have forgotten which one of the  
14 boiling water reactors it was in there. EBWR or  
15 something like that.

16 MR. JUNG: The mPower design at the  
17 beginning of NuScale.

18 MEMBER BROWN: And it was really complete.  
19 And now to just see it subsumed into a footnote  
20 somewhere even though theoretically it's going to be  
21 recognized. Because a lot of the stuff we're going to  
22 be seeing, it's not going to be all advanced reactors.  
23 People are going to be using conventional light-water  
24 -- just regular light-water reactors. We're going to  
25 be involved in a lot of the work that's being done.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1           So I'm kind of worry about having the  
2 ability to carry that whole 15 years' worth of effort  
3 developing the details and now it's kind of relegated  
4 into a footnote in the --

5                         (Simultaneous speaking.)

6           MR. JUNG: -- to make sure that for non-  
7 LWR entities, like x-Energy and Natrium reactors, and  
8 those plants are all using designer review guides for  
9 SDR guidance.

10           MEMBER BROWN: It is in the references.  
11 And I did check out where it was used or brought up in  
12 the entire -- in the documents supplied to us. So  
13 just curious. All right. I'm not going to be around  
14 forever. I'm getting long in the tooth to phrase it.

15           MR. JUNG: DRG, it's a great guidance.

16           MEMBER BROWN: As long as you guys are  
17 maintaining that emphasis even though I may be pushing  
18 up daisies in a few years, it's nice to have that  
19 emphasis still there. I'm finished.

20           CHAIR PETTI: I wanted to ask Joe to be  
21 sure. You would like a letter from us?

22           MR. SEBROSKY: I'll defer to my boss,  
23 Steven.

24           MR. LYNCH: Hey, good morning, still, for  
25 a few more minutes. This is Steve Lynch, chief of the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 Advanced Reactor Policy Branch. So the NRC staff met  
2 with the committee today to provide an update on the  
3 status of the development of the TICAP and ARCAP  
4 documents with a focus on how we plan on addressing  
5 the public comments received.

6 While we were not explicitly expecting the  
7 committee to prepare a letter for this effort, the  
8 staff, as always, is prepared to engaged with the ACRS  
9 full committee and receive any recommendations and  
10 conclusions that the committee may want to provide in  
11 a letter.

12 MEMBER BROWN: Can I ask one other  
13 question relative to that? I don't want to drag this  
14 out, but was there a reason for doing that as a  
15 footnote as opposed to a more direct reference? Did  
16 you all have that discussion? You can see this  
17 bothers me a little bit.

18 (Simultaneous speaking.)

19 CHAIR PETTI: Charlie, there's some really  
20 important footnotes in the regulation we can go point  
21 out to you.

22 MEMBER BROWN: So I'm not the only one  
23 that's been relegated to a footnote?

24 CHAIR PETTI: Correct. Correct.

25 MR. JUNG: A footnote for light-water

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 reactors is very similar to non-LWR discussion we had  
2 on overall --

3 (Simultaneous speaking.)

4 MR. JUNG: -- framework. Bringing light-  
5 water reactor framework into it potentially can delay  
6 the issuance of DRG. That was one of the reasons.  
7 Because we have a whole set of organizations to review  
8 and concur on, potentially addressing different  
9 opinions.

10 MEMBER BROWN: Okay. Well, I 'm bringing  
11 this up since somebody supposedly is going to be  
12 around after me. I'm not going to live forever. And  
13 he's about 20 years younger than me. So you're going  
14 to get stressed using that I suspect --

15 CHAIR PETTI: And I got one other thing  
16 I'd like to --

17 MEMBER BROWN: -- his participation. I'm  
18 done. Thank you.

19 CHAIR PETTI: We have four minutes.

20 MEMBER HALNON: I just want to mention  
21 throughout these guidances, you put a lot of sort of  
22 the parking lot as the pre-application engagement in  
23 the process without a lot of structure around what  
24 that looks like. Many of those pre-application  
25 engagements are proprietary so they're not public and

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 available to other companies to see how they did.

2 As you get through that, I would recommend  
3 you keeping some lessons that could be generically  
4 applied to other pre-application processes so that  
5 you're not getting a new ROC every time you come in.  
6 I think there is some pre-application guidance for the  
7 light-water reactors out there that is in some kind of  
8 --

9 CHAIR PETTI: There is the Appendix A. I  
10 really like it.

11 MR. SEBROSKY: Yeah. So Appendix A in the  
12 ARCAP roadmap ISG is the pre-application guidance that  
13 --

14 MEMBER HALNON: Okay. I missed that. I  
15 didn't see that.

16 CHAIR PETTI: No, it's in the letter.  
17 Because we talked this ad nauseam as a committee --

18 MEMBER HALNON: Yeah, because it is --

19 CHAIR PETTI: -- about the need and the  
20 timeliness.

21 MEMBER HALNON: -- important now.

22 CHAIR PETTI: You guys hid it.

23 MEMBER BROWN: I'd like to just follow-up  
24 on your comment. We developed an ISG in the INC world  
25 for pre-application processes. We did this 10 or 12

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1 years ago. And is that part of this overall ISG so  
2 there's still that available for the pre-application  
3 review? Because that really gets a lot of the  
4 complications. What should he expect? What should  
5 the applicant expect? And that was pretty  
6 comprehensive back then. So is that still part of  
7 this -- in play also?

8 MR. JUNG: This Appendix A is for all  
9 disciplines. It covers very critical elements. So  
10 that in INC area pre-applications are in a sense are  
11 actually --

12 MEMBER BROWN: Are a part of that? Okay.  
13 All right. Thank you.

14 CHAIR PETTI: Okay. And remember, you  
15 guys, we can talk about this at full committee. We  
16 have a hard stop in two minutes because we have a  
17 lunch meeting. I just want to --

18 MEMBER BROWN: I can't be ignored

19 CHAIR PETTI: -- I just want to thank the  
20 staff for their time today, and we'll see you in full  
21 committee. We have finished this session.

22 MEMBER REMPE: So I want to remind the  
23 virtually attending members that they have a different  
24 --

25 PARTICIPANT: You're not on, Joy.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1716 14th STREET, N.W., SUITE 200  
WASHINGTON, D.C. 20009-4309

1                   MEMBER REMPE:    I think I am.    Okay.  
2                   There's no speaker up there so I don't worry about it  
3                   as much.    But anyway, I want to remind those members  
4                   who are here virtually that there is a different  
5                   invitation and the meeting will start at 12:15.

6                   And also there is a third invitation at 1  
7                   o'clock for a different meeting.    So just kind of look  
8                   at your calendar.    If you've got a problem, talk to  
9                   Larry, and he'll figure out what needs to be said.  
10                  But I think we're good.    Thank you.    I'm going to log  
11                  off of this one right now.    Okay?

12                  (Whereupon, the above-entitled matter went  
13                  off the record at 11:59 a.m.)

Advanced Reactor Content of Application Project  
(ARCAP) Interim Staff Guidance (ISG) Documents and  
Technology Inclusive Content of Application Project  
(TICAP) Guidance Documents Status  
ACRS Regulatory Rulemaking, Policies and Practices  
Subcommittee

November 16, 2023

# Purpose and Agenda

- Provide a high-level overview of the Technology Inclusive Content of Application Project (TICAP) Regulatory Guide 1.253 and the nine Advanced Reactor Content of Application Project (ARCAP) Interim Staff Guidance Documents
  - Include overview of the comments received and the NRC's disposition of these comments
- Agenda
  - High-level overview of ARCAP and TICAP structure
  - Discussion of Regulatory Guide 1.253 (TICAP Guidance)
  - Discussion of ARCAP interim staff guidance documents
  - Path forward

# Background

- ACRS Future Plant Designs Subcommittee Previous Briefings
  - March 17, 2021
    - Provided a high-level overview of the structure of ARCAP and TICAP
  - July 21, 2021
    - Updated overview of structure of ARCAP and TICAP
  - December 17, 2021
    - Provided a high-level overview of the draft white paper versions of the nine ARCAP ISGs and the TICAP draft regulatory guide

# Background

- ACRS Future Plant Designs Subcommittee Previous Briefings (continued)
  - After these briefing the NRC staff's near-term focus is that the ARCAP and TICAP guidance is being issued to support near term 10 CFR Part 50 and 52 non-light water reactor applications
  - Longer term the NRC staff will update the guidance as appropriate to support the 10 CFR Part 53 rulemaking effort

# Background – How to Access Draft Documents and Comments

- Revision 0 of ten draft documents were reissued in May of 2023 (ADAMS Package No. [ML23044A038](#)).
- Revision 1 of the TICAP guidance was issued in September of 2023
- All of the documents are available in Table 2 of the public ARCAP/TICAP webpage <https://www.nrc.gov/reactors/new-reactors/advanced/rulemaking-and-guidance/advanced-reactor-content-of-application-project.html>

ARCAP ISG Title	ADAMS Accession #	Regulations.gov Docket ID	# of Comments
Draft DANU-ISG-2022-01, Review of Risk-Informed, Technology-Inclusive Advanced Reactor Applications – Roadmap	<a href="#">ML22048B546</a>	<a href="#">NRC-2022-0074</a>	68
Draft DANU-ISG-2022-02, Chapter 2, “Site Information”	<a href="#">ML22048B541</a>	<a href="#">NRC-2022-0075</a>	12
Draft DANU-ISG-2022-03, Chapter 9, “Control of Routine Plant Radioactive Effluents, Plant Contamination and Solid Waste	<a href="#">ML22048B543</a>	<a href="#">NRC-2022-0076</a>	13
Draft DANU-ISG-2022-04, Chapter 10, “Control of Occupational Doses”	<a href="#">ML22048B544</a>	<a href="#">NRC-2022-0077</a>	2
Draft DANU-ISG-2022-05, Chapter 11, “Organization and Human-System Consideration”	<a href="#">ML22048B542</a>	<a href="#">NRC-2022-0078</a>	12
Draft DANU-ISG-2022-06, Chapter 12, “Post Construction Inspection, Testing and Analysis Program”	<a href="#">ML22048B545</a>	<a href="#">NRC-2022-0079</a>	9
Draft DANU-ISG-2022-07, “Risk-Informed ISI/IST Programs”	<a href="#">ML22048B549</a>	<a href="#">NRC-2022-0080</a>	43
Draft DANU-ISG-2022-08, “Licensing Modernization Project-based Approach for Developing Technical Specifications”	<a href="#">ML22048B548</a>	<a href="#">NRC-2022-0081</a>	8
Draft DANU-ISG-2022-09, “Risk-Informed, Performance-Based Fire Protection Program (for Operations)”	<a href="#">ML22048B547</a>	<a href="#">NRC-2022-0082</a>	23
Draft Regulatory Guide 1404, “Guidance for a Technology Inclusive Content of Application Methodology to Inform the Licensing Basis and Content of Applications for Licenses, Certifications, and Approvals for Advanced Reactors”	<a href="#">ML22076A003</a>	<a href="#">NRC-2022-0073</a>	73
Draft Regulatory Guide 1404, Revision 1 – added Appendix B to provide additional guidance for expectations for a probabilistic risk assessment (PRA) at the construction permit (CP) stage	<a href="#">ML23194A194</a>	<a href="#">NRC-2022-0073</a>	30

# ARCAP/TICAP Background

- Overview of ARCAP/TICAP draft guidance documents provided during an advanced reactor stakeholder public meeting on June 7, 2023
  - Overview included a discussion of changes to draft guidance documents from white paper versions of the documents
  - See slides 96 through 144 at [ML23157A018](#)
    - Includes both NRC staff slides and Nuclear Energy Institute Slides
  - Meeting occurred during the open comment period for the documents
    - Included information on how to provide comments on documents
- Public meeting held on August 22, 2023 (after public comment period ended), to provide commenters an opportunity to discuss their comments
  - Meeting summary available at: [ML23236A481](#)

# ARCAP/TICAP Background

- Public meeting held on September 26, 2023, to discuss DG-1404, Revision 1
  - DG-1404, Revision 1, included additional guidance related to construction permit probabilistic risk assessment development
  - Meeting held during public comment period
    - Purpose was to facilitate stakeholder understanding of guidance and to provide information on how to provide comments on the draft guidance
  - Meeting slides available at: [ML23265A185](#)
- Material to support today's meeting available at: [ML23283A092](#)
  - Includes ten comment resolution tables and ten guidance documents
    - Guidance documents provide a comment identification that provides a reason for the change
- ARCAP/TICAP Public Webpage provides links to key meetings and documents associated with the development of these documents (see: <https://www.nrc.gov/reactors/new-reactors/advanced/rulemaking-and-guidance/advanced-reactor-content-of-application-project.html>)

# ARCAP/TICAP Background

- Guidance for developing and reviewing technology-inclusive, risk-informed, and performance-based non-light water (non-LWR) applications
- Being developed to support 10 CFR Part 50 and 10 CFR Part 52 applications
  - Needed to support expected near-term non-LWR Part 50/52 applications using the licensing modernization project (LMP) process in NEI 18-04, Revision 1
- The NRC staff intends to revise the guidance per the final Part 53 rulemaking language

# ARCAP Background

- Broad in nature and intended to cover guidance for non-LWR applications for:
  - combined licenses
  - construction permits
  - operating licenses
  - design certifications
  - standard design approvals
  - manufacturing licenses
- Encompasses TICAP
  - TICAP is guidance for off-normal reactor states only.
    - ARCAP encompasses everything needed for a license application.

# TICAP Background

- TICAP scope is governed by the LMP-based process
  - LMP uses risk-informed, performance-based approach to select licensing basis events, develop structures, systems, and components (SSC) categorization, and ensure that defense-in-depth is considered
- Industry developed key portions of TICAP guidance
  - See NEI 21-07, Revision 1, “Technology Inclusive Guidance for Non-Light Water Reactors Safety Analysis Report Content for Applicants Utilizing NEI 18-04 Methodology,” (ADAMS Accession No. [ML22060A190](#))
- RG 1.253 (issued as DG-1404) proposes to endorse NEI 21-07, Revision 1, with clarifications and additions
  - There are no proposed exceptions

# ARCAP and TICAP - Nexus

## Outline Safety Analysis Report (SAR) – Based on TICAP Guidance

1. General Plant Information, Site Description, and Overview
2. Methodologies and Analyses and Site Information\*
3. Licensing Basis Event (LBE) Analysis
4. Integrated Evaluations
5. Safety Functions, Design Criteria, and SSC Safety Classification
6. Safety Related SSC Criteria and Capabilities
7. Non-safety related with special treatment SSC Criteria and Capabilities
8. Plant Programs

## Additional SAR Content –Outside the Scope of TICAP

9. Control of Routine Plant Radioactive Effluents, Plant Contamination, and Solid Waste
10. Control of Occupational Doses
11. Organization and Human-System Considerations
12. Post-construction Inspection, Testing and Analysis Programs

## Audit/inspection of Applicant Records

- Calculations
- Analyses
- P&IDs
- System Descriptions
- Design Drawings
- Design Specs
- Procurement Specs
- Probabilistic Risk Assessment

## Additional Portions of Application

- Technical Specifications
- Technical Requirements Manual
- Quality Assurance Plan (design)
- Fire Protection Program (design)
- Quality Assurance Plan (construction and operations)
- Emergency Plan
- Security Plan
- Cyber Security Plan
- SNM physical protection program
- SNM material control and accounting
- Fire Protection Program (operational)
- Radiation Protection Program
- Offsite Dose Calculation Manual
- Inservice inspection/Inservice testing (ISI/IST) Program
- Environmental Report and Site Redress Plan
- Financial Qualification and Insurance and Liability
- Fitness for Duty Program
- Aircraft Impact Assessment
- Performance Demonstration Requirements
- Nuclear Waste Policy Act
- Operational Programs
- Exemptions, Departures, and Variances )

\* SAR Chapter 2 derived from TICAP guidance as supplemented by ARCAP interim staff guidance Chapter 2, "Site Information"

- Safety Analysis Report (SAR) structure based on clean sheet approach
- Additional contents of application may exist only in the SAR, may be in a separate document incorporated into the SAR, or may exist only outside the SAR.
- The above list is for illustration purposes only.

# TICAP and ARCAP Roadmap Common Guidance

- Applicability is now only for non-LWRs
  - Recommends that light-water reactor applicants wanting to use ARCAP/TICAP guidance engage in pre-application discussions
- All ISGs provide applicant guidance and NRC staff review guidance in separate sections
- Removed references that did not have complete NRC staff review
  - Appendices added to several ISGs to list in-development guidance documents that could affect future revision of those ISGs

# TICAP and ARCAP Roadmap Common Guidance

- Importance of Principal Design Criteria (PDC)
  - TICAP guidance covers PDCs associated with the licensing modernization project (i.e., those associated with off-normal conditions)
  - ARCAP Roadmap ISG and associated ISGs (e.g., ARCAP Chapter 9) contains PDC guidance for normal operations
  - RG 1.232, “Guidance For Developing Principal Design Criteria For Non-light-water Reactors,” ([ML17325A611](#)) provides additional guidance for reviewer consideration
  - ARCAP Roadmap ISG recommends discussion of PDC during preapplication phase

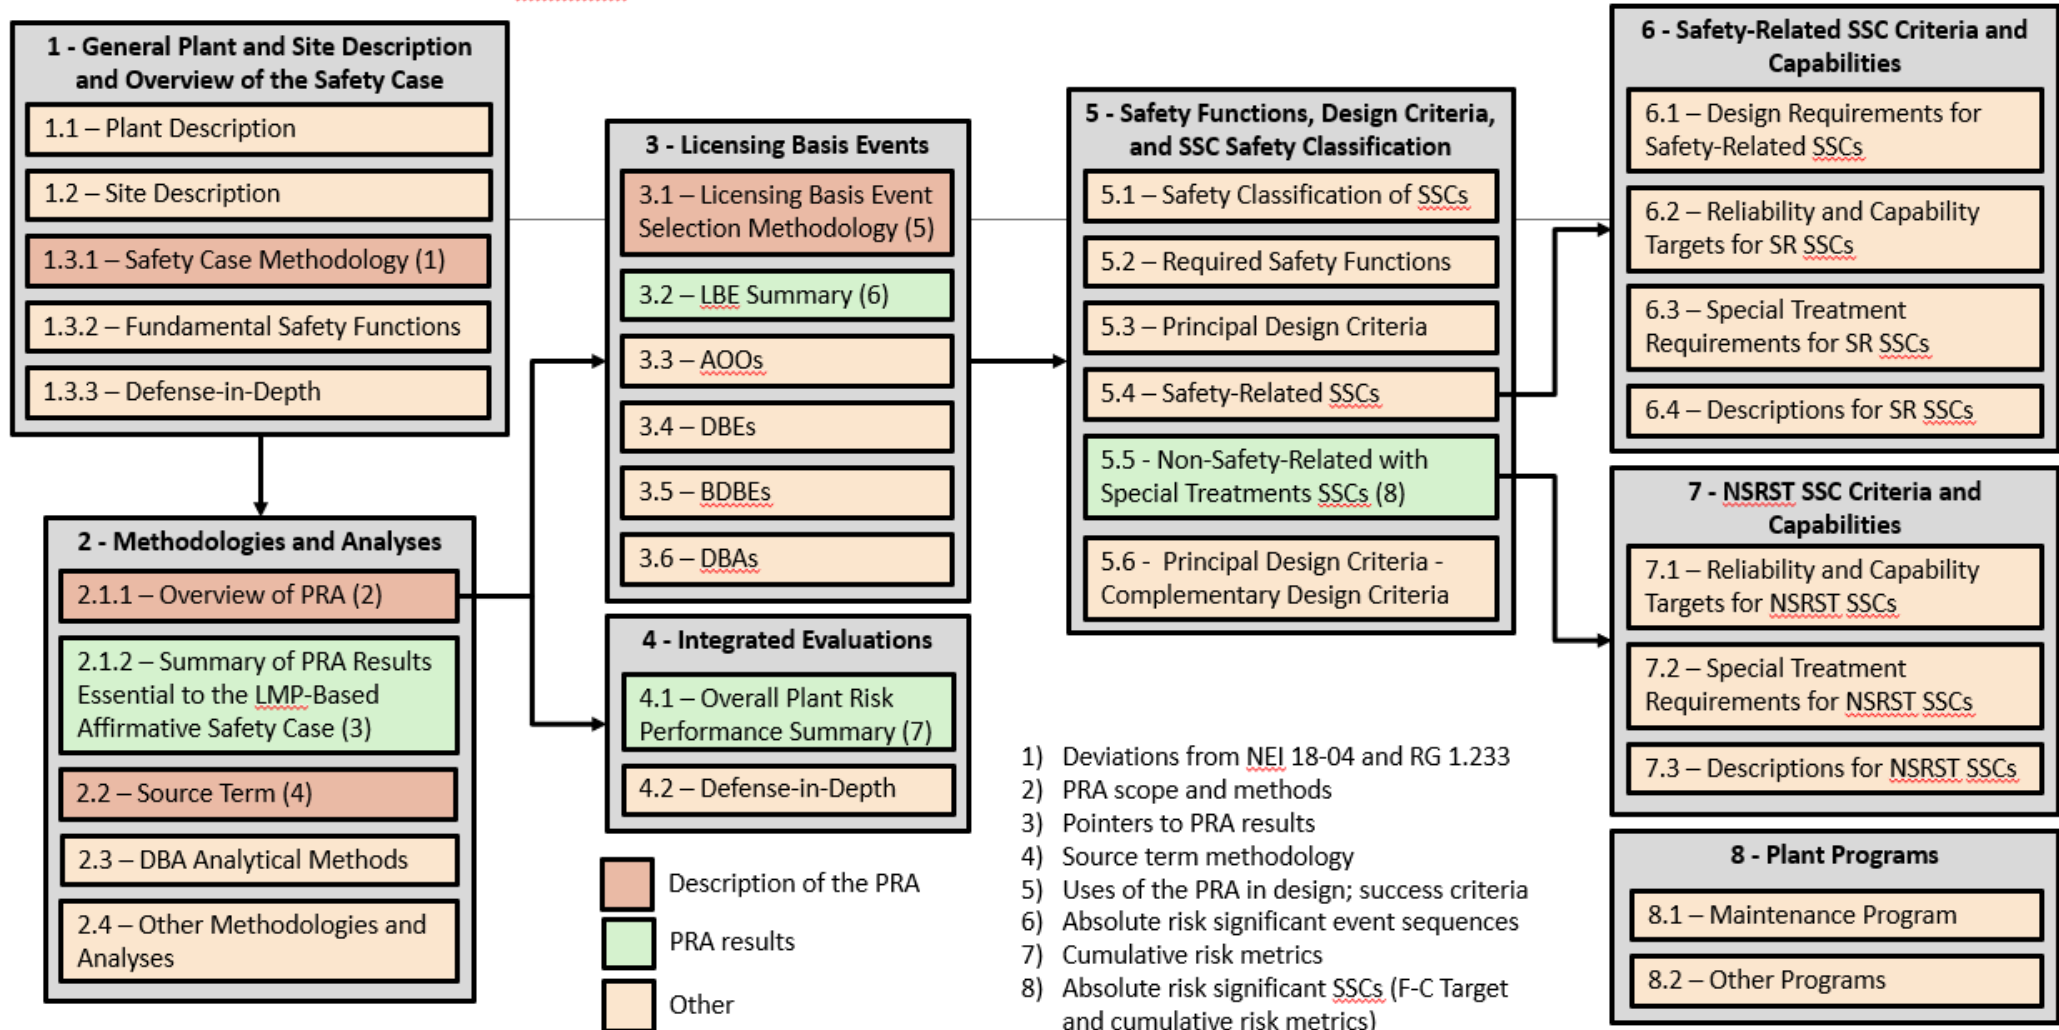

# Technology Inclusive Content of Application Project – Overview and Discussion of Comments on DG-1404

# TICAP – High Level Overview

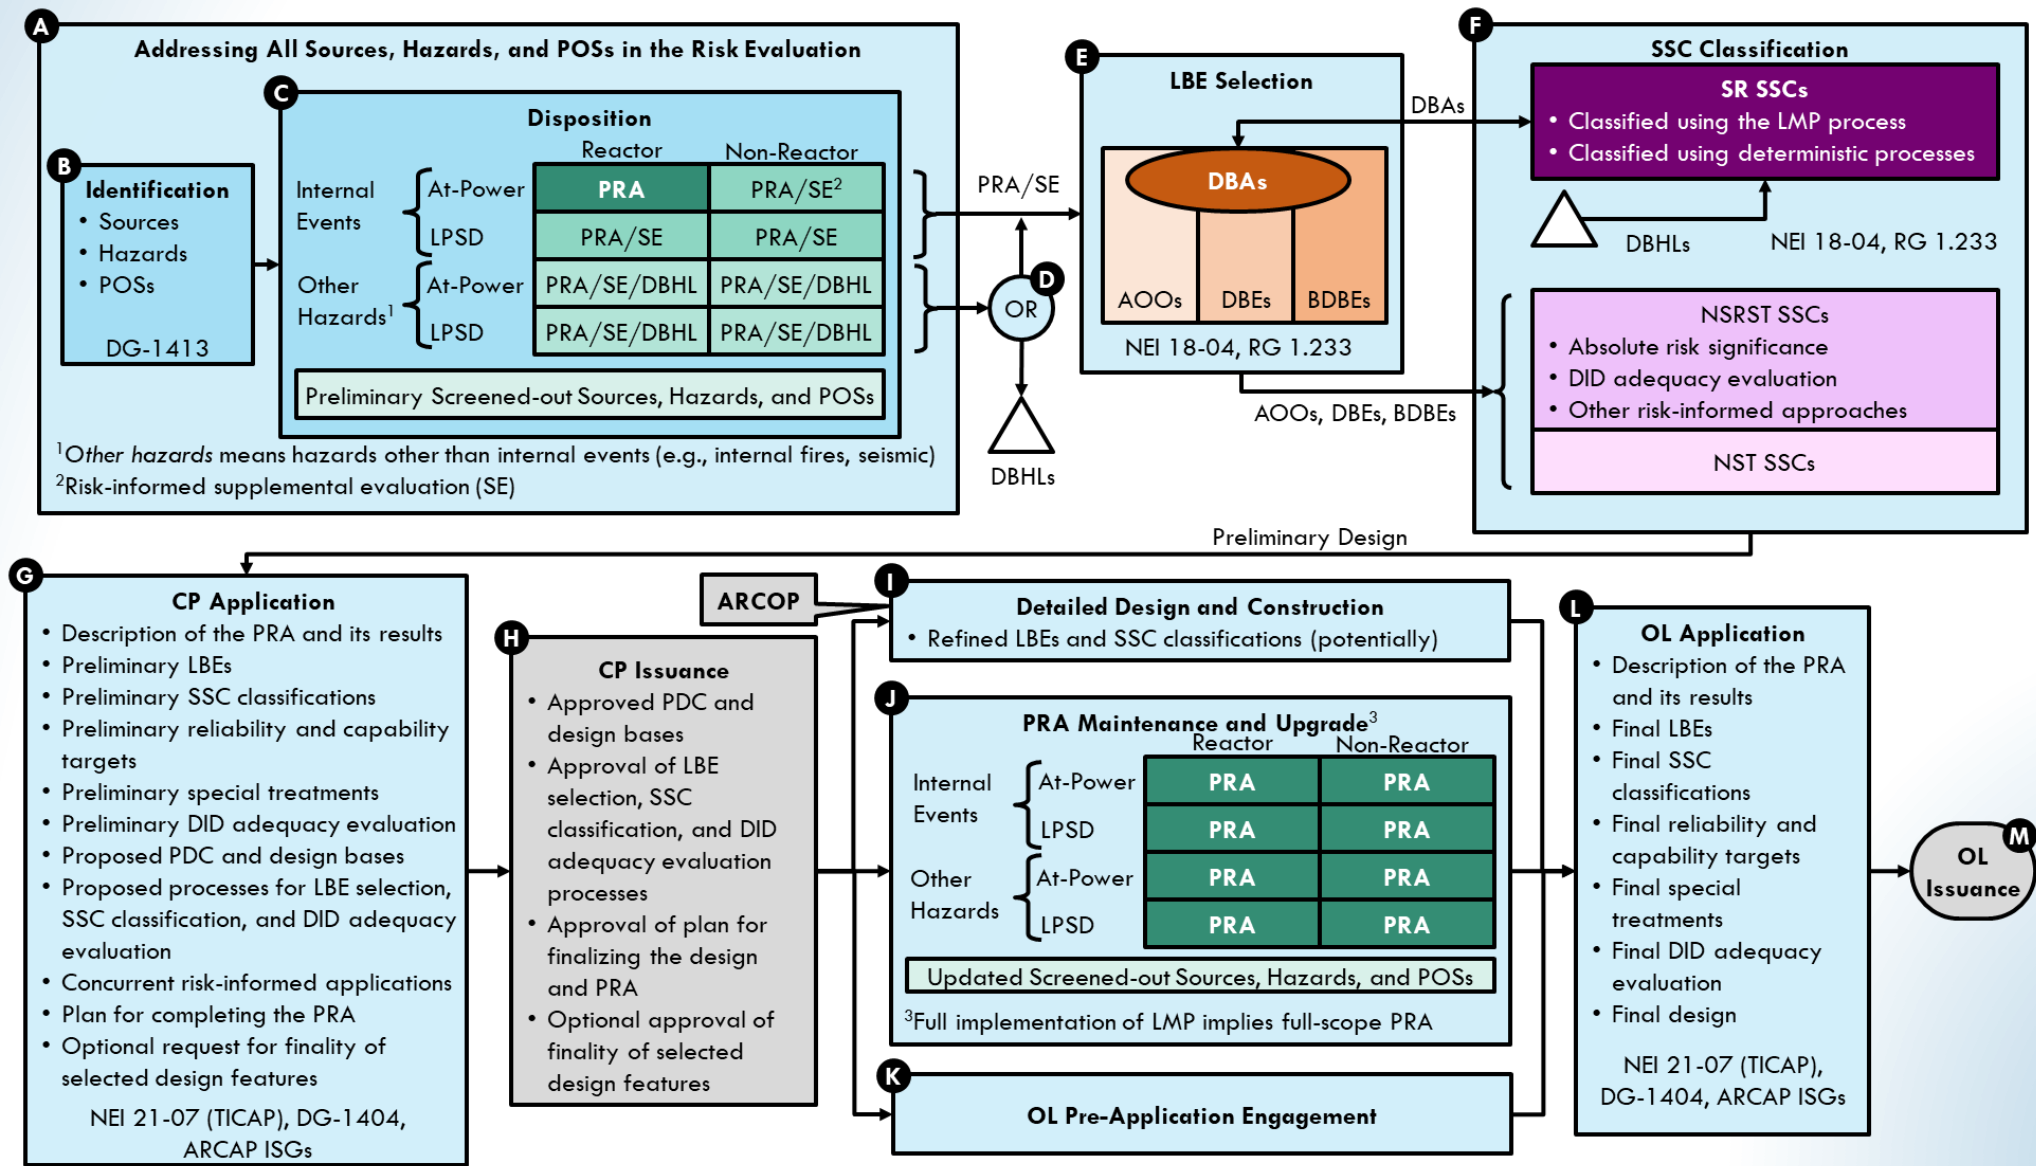

- Goal is to develop technology-inclusive guidance that proposes an optional formulation of advanced reactor application content that is based on a risk-informed, performance-based approach for demonstrating that plant safety meets the underlying intent of the current requirements
- Guidance is intended to increase efficiency of developing and reviewing an application
- Scope is governed by the LMP methodology to facilitate a systematic, technically acceptable, and predictable approach for developing key portions of a design's SAR
  - The LMP methodology provides processes for identifying LBEs, classifying and establishing special treatments for certain SSCs, and ensuring DID adequacy
- The LMP methodology is based on a full-scope probabilistic risk assessment (PRA)
  - All sources of radiological material,
  - all hazards,
  - all plant operating states,
  - full analysis of scenario progressions (i.e., analyzed from initiator to radiological consequence)

# TICAP Guidance

## TICAP: Location of PRA-Related Information in the SAR

# TICAP Construction Permit/Operating License Guidance

# Construction Permit PRA Acceptability

## Key Points from DG-1404, Revision 1:

- All sources, hazards, and plant operating states (POSS) should be addressed (i.e., identified and dispositioned) in the CP application, where *dispositioned* means each item is either:
  - Modeled in the PRA logic model,\*
  - Screened out of the PRA logic model with justification,\*
  - Accounted for using risk-informed supplemental evaluations, or
  - Accounted for using design-basis hazard levels (DBHLs) for hazards other than internal events
- As a minimum, the LMP-based CP application should be supported by an internal events, at-power, reactor PRA logic model, which represents the fundamental plant response model that:
  - helps demonstrate the applicant's ability to develop an acceptable PRA logic model and
  - establishes an acceptable foundation for upgrading the PRA logic model as the design progresses
  - while acceptable for the CP stage of licensing, achieving only the minimum scope of the PRA logic model may not realize the full benefit of the LMP methodology

NOTE: Generally referring to *the PRA* implies these three items

\* The ASME/ANS non-LWR PRA consensus standard, ASME/ANS RA-S-1.4-2021, provides requirements and processes for defining the scope of the CP PRA logic model.

# Construction Permit PRA Acceptability

## Key Points from DG-1404, Revision 1 (continued):

- A self-assessment of the PRA logic model, screening analyses, and risk-informed supplementary evaluations helps reduce the need for in-depth NRC review
  - This could be a peer review but is not required as such
- The CP application should provide a preliminary, yet complete\*\*, set of LBEs
- The CP application should provide a preliminary, yet complete\*\*, SSC classifications
- Further expectations
  - The CP application should provide a plan for maintaining and upgrading the PRA during construction.
    - Example: Replacing a seismic DBHL with a seismic PRA
    - CP holders are encouraged to keep the staff advised of changes to the PRA completion plan that significantly affect the design.

\*\* Consistent with the maturity of design information and relative to the scope of the PRA logic model, screening analyses, and risk-informed supplementary evaluations supporting the CP application.

# TICAP Comments

- Seventy-three comments received on DG-1404, Revision 0
- Thirty comments received on DG-1404, Revision 1
- Most comments related to the ARCAP/TICAP guidance documents
- Changes resulting from comments on Revision 0:
  - Removed clarifications and additions related to principal design criteria (PDC)
    - NRC staff determined that the PDC guidance found in NEI 21-07, Revision 1, is sufficient such that RG 1.253 clarifications and additions are not needed
  - Removed an addition related to information applicants need to supply when using a risk-informed, performance-based approach other than LMP
    - Agreed with commenter that this approach is outside the scope of RG 1.253

# TICAP Comments

- Changes resulting from comments on Revision 0 (continued):
  - Provided clarification regarding use of guidance for a manufacturing license (ML) or standard design approval (SDA)
    - NEI 21-07, Revision 1, provides guidance for combined licenses, design certifications, construction permits and operating licenses but not MLs or SDAs
    - Removed RG 1.253 applicability of guidance to MLs and SDAs
      - Added discussion that ML and SDA applicants should consider the design certification guidance and make appropriate modifications
      - ML and SDA applicants are encouraged to discuss their intended use of the guidance with NRC staff during preapplication interactions
      - Other suggested additions related to MLs not accepted by the NRC staff

# TICAP Comments

- Changes resulting from comments on Revision 0 (continued):
  - Moved references to supporting guidance from RG 1.253 to the ARCAP Roadmap ISG
    - Examples include reference to design review guide for instrumentation and control and ASME Section III Division 5 guidance
      - NRC staff agreed with commenter that such references are outside the scope of RG 1.253 and more properly belong in ARCAP Roadmap ISG
    - As a result of this comment DG-1404, Appendix A – Guidance Documents Under Development was removed from RG 1.253
      - Guidance documents under development found in Appendix D of ARCAP Roadmap ISG
      - DG-1404, Appendix B (CP PRA guidance), is found in Appendix A to RG 1.253

# TICAP Comments

- Changes resulting from comments on Revision 1:
  - Affiliated staff positions with one of the following:
    - PRA acceptability
    - Documentation needed in the SAR to demonstrate the acceptability of the CP PRA
    - Archival documentation needed to demonstrate the acceptability of the CP PRA
  - Documenting essential assumptions in the PSAR
  - Clarified the use of the term PRA
  - Clarified that tables on supporting requirement applicability are not required
  - Revised applicability of some supporting requirements

# TICAP Comments

- Comments related to Revision 0 that are resolved with no changes:
  - NRC staff did not expand the guidance to light water reactors (LWR)
    - The scope of NEI 18-04, Revision 1, and NEI 21-07, Revision 1, are limited to non-LWRs
      - Based on the ASME/ANS non-LWR PRA consensus standard endorsed for trial use (i.e., full-scope PRA)
      - The series of PRA consensus standards needed to achieve a full-scope PRA for LWRs has not yet been endorsed
    - LWR applicants choosing to use LMP for their applications are encouraged to discuss their plans with the NRC staff

# TICAP Comments

- Comments related to Revision 1 that are resolved with no changes:
  - Descriptions of risk metrics used that address meeting the QHOs
  - Emphasizing the meaning of *addressing* all sources, hazards, and POSs
  - Addressing that LMP is risk-informed, not risk-based
  - Addressing the meaning of the phrase “full LMP implementation”
  - Meeting high-level requirements and related staff positions on PRA acceptability by virtue of meeting underlying, applicable supporting requirements in ASME/ANS RA-S-1.4-2021
  - Out-of-scope comments

# Advanced Reactor Content of Application Project Roadmap – Overview and Discussion of Comments

# ARCAP Roadmap Overview

- Provides guidance for other portions of the application outside of ISGs including emergency plan, security, financial qualification and insurance and liability
- Includes four appendices
  - Appendix A – Preapplication Guidance
  - Appendix B – Applicability of Regulations to non-light water reactors
  - Appendix C – Construction Permit Guidance
  - Appendix D – Draft Documents Under Development

## **Additional Portions of Application**

- Technical Specifications
- Technical Requirements Manual
- Quality Assurance Plan (design)
- Fire Protection Program (design)
- Quality Assurance Plan (construction and operations)
- Emergency Plan
- Security Plan
- Cyber Security Plan
- SNM physical protection program
- SNM material control and accounting
- Fire Protection Program (operational)
- Radiation Protection Program
- Offsite Dose Calculation Manual
- Inservice inspection/Inservice testing (ISI/IST) Program
- Environmental Report and Site Redress Plan
- Financial Qualification and Insurance and Liability
- Fitness for Duty Program
- Aircraft Impact Assessment
- Performance Demonstration Requirements
- Nuclear Waste Policy Act
- Operational Programs

# ARCAP Roadmap Comments

- Sixty-eight comments received
- Represents second most comments received on ARCAP/TICAP guidance documents
- Changes made because of comments:
  - Expanded the applicability of Appendix B (Applicability of Regulations to Non-LWRs) to Manufacturing License applications.
  - Deleted reference to the Facility Safety Program.
  - Expanded guidance on leaks from coolant systems to specifically address leaks from low pressure systems.
  - Added guidance that applicants need to consider safety concerns beyond those identified by the LMP process when identifying PDCs applicable to their design.

# ARCAP Roadmap Comments

- Added guidance that applicants are responsible for identifying needed programs beyond those specified in Section 8.
- Transferred several items (e.g., consideration of LWR GSIs) from DG-1404 to the Roadmap, since they are not part of the LMP process.

Requested changes not incorporated:

- Add a statement that consensus Codes and Standards have more weight and take precedence over regulations.
- Eliminate the design detail required in the SAR. Only identify the hazards for which design measures have been implemented.

# ARCAP Roadmap Comments

Comments not incorporated (continued)

- Delete Chapter 11, “Organization and Human-System Considerations”. Commenter indicated that “The relationship with safety is tenuous.”
- Extend the applicability of the documents to LWRs. (NOTE: expanding the applicability to LWRs is under consideration as a future action. The current limitation to non-LWRs is for consistency with NEI 18-04 and 21-07, who’s scope is non-LWRs.)

# Advanced Reactor Content of Application Project Chapter 2 “Site Information” Overview and Discussion of Comments

# Chapter 2 Overview

- Chapter 2 provides guidance on the scope and approach for selecting the external hazards which must be considered in the plant design.
- The selection of external hazards is to be informed by a probabilistic external hazards analysis, when supported by available methods, data, standards and guides.
- Chapter 2 limits the amount of information that needs to be provided in the SAR to that necessary to establish the design basis external hazards.
- Chapter 2 refers to existing site evaluation guidance (e.g., RGs) where appropriate.
- The guidance in Chapter 2 is based upon the requirements of 10 CFR Part 100, Subpart B.
- 12 comments received.

# Chapter 2 Comments

- Changes made because of comments:
  - Revised the frequency of occurrence of nearby industrial, transportation and military facility hazards to be considered in the design to be consistent with existing guidance.
  - Allow the use of a combination of probabilistic and deterministic methods to select external hazards.
  - Eliminated the need to submit comparative information on slope stability.
- Requested changes not incorporated:
  - Development of a standardized process for screening out external hazards

# Advanced Reactor Content of Application Project Chapter 9 – Control of Effluents, Plant Contamination and Solid Waste

## Overview and Discussion of Comments

# Chapter 9 Overview

- Applies a performance-based approach for level of detail of information provided in the SAR related to control of routine plant radioactive effluents, plant contamination and solid waste

# Chapter 9 Comments

## Changes made because of comments:

- Clarified application content for design certifications, manufacturing licenses, and standard design approvals
- Clarified what design information is necessary when an applicant requests an exemption to 10 CFR 50.34 content requirements

## Requested changes not incorporated:

- Delete guidance the commenter interpreted as related to draft Part 53
- Delete guidance directing applicants to provide a summary of estimated doses
- Remove prescriptiveness; only reference industry standards
- Remove references to NEI template documents not previously formally endorsed but previously approved via safety evaluation

# Advanced Reactor Content of Application Project Chapter 10 – Occupational Dose Overview and Discussion of Comments

# Chapter 10 Overview

- Applies a performance-based approach for level of detail of information provided in the SAR regarding the control of occupational dose

# Chapter 10 Comments

Changes made because of comments:

- None

Requested changes not incorporated:

- None, but staff disagreed with a comment statement that the program to control occupational exposure does not extend ALARA into the design

# Advanced Reactor Content of Application Project Chapter 11 Organization and Human Systems Interaction Overview and Discussion of Comments

# Chapter 11 Overview

- Supports Part 50 and 52 non-LWR applications with relatively traditional concept of operations
  - Does not address remote or autonomous operations
- Guidance to applicants and NRC reviewers on:
  - Organizational staffing
  - Qualifications
  - Training
  - Operator Licensing: staffing exemptions, licensing during plant construction (i.e., cold licensing), considerations for new programs, other exemptions
- NRC staff also incorporated human factors engineering (HFE) guidance to supplement LMP and TICAP guidance

# Chapter 11 Comments

## Changes made because of comments:

- Added references to existing guidance covering level of detail for organizational information in CPs, OLs, and COLs (SRP Sections 13.1.1 and 13.1.2–13.1.3)
- Added applicable regulations in the acceptance criteria section
- Clarified acceptance criteria for addressing numbers of licensed and non-licensed operators; added reference to 10 CFR 26.205(c)

## Requested changes not incorporated:

- Delete entire ISG or major sections; rely on NEI 18-04, "Risk-Informed Performance-Based Technology Inclusive Guidance for Non-Light Water Reactor Licensing Basis Development"
- Delete guidance related to topics the commenter interpreted as (draft) Part 53 requirements
- Add references to 10 CFR 50.34 (post-TMI requirements) topics
- Add clarification on technology neutral approaches for a site to meet the requirement for engineering expertise

# Advanced Reactor Content of Application Project Chapter 12 – Post Construction Inspection Testing and Analysis Program Overview and Discussion of Comments

# Chapter 12 Overview

- Intended to provide guidance to the NRC staff regarding application content that would support making the finding that the constructed plant has met the applicable Part 50 and Part 52 regulations to support issuance of an operating license or authorization to load fuel, respectively
- ISG differentiates between 10 CFR Part 52 applicants that must include inspections, tests, analyses and acceptance criteria (ITAAC) and 10 CFR Part 50 applications that are not required to include ITAAC.
- Requirements to describe preoperational testing and initial operations in OL and COL applications are contained in 50.34(b)(6)(iii) and 52.79(a)(28), respectively.
- Provides guidance for:
  - post-manufacturing and construction inspection, preoperational testing (i.e., tests conducted following construction and construction-related testing, but prior to initial fuel load), analysis verification, and
  - initial startup testing (i.e., tests conducted during and after initial fuel load, up to and including initial power ascension).

# Chapter 12 Comments

## Changes made because of comments:

- Changed “post-construction.....” text to “post-manufacturing and construction” or just “post-manufacturing” if applicable
- Clarified content requirements for MLs and COLs referencing MLs
- Clarified text regarding pre-operational testing under a CP
- Removed specific reference to test review committee

## Requested changes not incorporated:

- Add additional information regarding what ISG sections apply to CPs
- Remove acceptance criteria that the commenter interpreted to go beyond 10 CFR Part 50

# Advanced Reactor Content of Application Project Inservice Inspection/Inservice Testing Overview and Discussion of Comments

# ARCAP ISI/IST Overview

- The ISG provides guidance for developing risk-informed, performance-based ISI/IST programs for non-LWRs.
- The ISG guidance is based upon the use of a plant-specific PRA to identify the SSCs to be included in the programs.
- The ISI guidance is based upon the use of:
  - ASME BPV Code, Section XI, Division 2, “Requirements for Reliability and Integrity Management (RIM) Programs for NPPs,” for developing the ISI program using risk information and an expert panel.
  - ASME BPV Code, Section III, Division 5, “High Temperature Reactors,” for designs using high temperature materials and notes that ASME is developing a flaw evaluation Code Case for high temperature materials.

# ARCAP ISI/IST Overview (continued)

- The IST guidance is based upon:
  - Existing IST program approach, with additional guidance for passive components, and notes that ASME is developing a new OM-2 Code for inservice testing of components in new and advanced reactors, including non-LWRs.
  - Using plant-specific risk information to determine the scope of the IST program and proposed testing frequencies.
- 43 comments received.

# ARCAP ISI/IST Comments

Changes made because of comments:

- Allow the use of NQA-1 when implementing ASME BPV Code, Section XI, Division 2.
- Allow the use of unissued consensus codes at the CP stage provided they are officially issued prior to submitting the OL application and provided design finality is not being requested on any portion of the design affected by the unissued codes.
- Allow applicants for multi-module plants to apply standard ISI and IST programs to each module, without separate program approvals, provided the modules are identical.

# ARCAP ISI/IST Comments

Requested changes not incorporated:

- Eliminate the discussion of the process to be followed when the ISI program identifies degradation has occurred, because ASME BPV Code, Section XI, Division 2, provides guidance in this area.
- Delete the discussion in the IST section on passive components.
- Include graphite and ceramic composite materials in the scope of ISI, because these materials are included in ASME BPV Code, Section III, Division 5.

NOTE: The ISG does not preclude the inclusion of these materials because ASME BPV Code, Section III, Division 5, is to be used in the development of ISI for high temperature materials.

# Advanced Reactor Content of Application Project Technical Specifications

## Overview and Discussion of Comments

# ARCAP Technical Specifications - Overview

- The text in the 10 CFR 50.36 regulations for TS content needs adaptation to correlate to the analysis and outputs of the risk-informed LMP approach described in NEI 18-04.
- Guidance addresses content for TS administrative controls section and recommended TS format

# ARCAP Technical Specifications Comments

## Changes made because of comments:

- Added reference to NEI 18-04 section that addresses risk metrics for use in developing LCO completion times
- Added guidance for technical specification information in PSARs
- Added guidance regarding the need for an exemption to 10 CFR 50.36 LCO criteria

## Requested changes not incorporated:

- Revise RG 1.177 to align with NEI 18-04 risk metrics
- Revise 10 CFR 50.36 to include criteria for non-LWRs

# Advanced Reactor Content of Application Project Fire Protection for Operations Overview and Discussion of Comments

# ARCAP Fire Protection for Operations- Overview

- 10 CFR 50.48(a) requires that each operating nuclear power plant have a fire protection plan that meets the requirements of either 10 CFR Part 50, Appendix A, Criterion 3 for LWRs or the applicant's proposed principal design criteria that have been deemed acceptable by the NRC.
  - Although 10 CFR 50.48(c) – NFPA 805 – does not apply to non-LWRs, concepts associated with this risk-informed approach are included in the draft ISG
- The scope of this ISG addresses the review of the application content regarding the fire protection program for operations including application descriptions of:
  - Management policy and program direction and the responsibilities of those individuals responsible for the program/plan's implementation.
  - The integrated combination of procedures and personnel that will implement fire protection program activities.

# ARCAP Fire Protection for Operations Comments

Changes made because of comments:

- None

Requested changes not incorporated:

- Add reference to NEI 21-07
- Remove statements that the commenter interpreted to be from draft Part 53 (planned) requirements
- Remove references to general design criteria
- Remove prescriptive guidance regarding fire protection program
- Delete clarifying text regarding acceptability of NFPA 805
- Clarify relationship between PDC 3 and RG 1.232
- Delete reference to RG 1.189
- Remove/relax guidance regarding fire brigades for advanced reactors
- Delete references to verification and validation (V&V) of fire models
- Delete acceptance criteria and replace with only commitments to codes and standards
- Add expectations for fire protection programs in CP applications
- Add endorsement of NFPA 804
- Remove references to the term Authority Having Jurisdiction (AHJ)
- Remove/revise criteria in the guidance that may not apply to SMRs
- Remove references to a monitoring program for a non-NFPA 805 plant
