Total funding requested: \$21,245.52
Funding Received: \$16,000.00

Project objectives and benefits: The objective of this project is to prepare students for undergraduate research in nuclear engineering. The study will give students a background in basic nuclear science and expose them to current research topics. It will enable students to start research as soon as they arrive at summer Research Experience for Undergraduates (REU). This will enable students to produce and present meaningful research results.
