NRC Schedules Open House to Discuss Robinson Nuclear Power Plant Performance

Nuclear Regulatory Commission staff will hold an <u>open house</u> April 24 to discuss the 2024 safety performance of the Robinson nuclear power plant. The plant is located in Hartsville, South Carolina, and is operated by Duke Energy.

The event will run from 6–7 p.m. Eastern time at the Hartsville Library, 147 W College Ave., in Hartsville. NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available to answer questions at the event.

The NRC concluded that the Robinson plant operated safely throughout 2024. All inspection findings and performance indicators were of very low safety significance. As a result, the plant remains under the agency's normal level of oversight, which includes thousands of hours of inspections each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and performance indicators to measure plant performance. The colors start at green and increase to white, yellow, or red based on the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

The annual assessment <u>letter</u> for the Robinson plant, including upcoming inspection plans, is available on the NRC website. Current performance information for the plant is also available on the NRC <u>website</u> and updated quarterly. Information about Duke Energy's <u>application</u> to renew Robinson's operating license will also be available at the open house.
