NRC Schedules Open House to Discuss Surry and North Anna Nuclear Power Plant Performance

Nuclear Regulatory Commission staff will hold an [open house](#) April 23 to discuss the 2024 safety performance of the Surry and North Anna nuclear power plants. Both plants, which have two units each, are operated by Dominion Energy and located in Virginia.

The event will run from 5:30–7 p.m. Eastern time at the Westerre Conference Center, 3831 Westerre Parkway, in Henrico, Virginia. NRC employees responsible for plant inspections, including the resident inspectors based full time at each site, will be available to answer questions at the event.

The public can also join the open house virtually via [Microsoft Teams](#) or by phone. To join by phone, call 301-576-2978 and enter passcode 735021475#.

The NRC concluded that both the Surry and North Anna plants operated safely throughout 2024. However, for part of the year, North Anna Unit 2 was under increased agency oversight due to an inspection finding of low to moderate safety significance related to one of the unit's emergency diesel generators. The NRC conducted a supplemental inspection in December and determined that the issue was properly understood and corrected. As a result, Unit 2 returned to normal oversight by the end of 2024.

The NRC Reactor Oversight Process uses color-coded inspection findings and performance indicators to measure plant performance. The colors start at green and increase to white, yellow or red based on the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

The annual assessment [letters](#) for both plants, including upcoming inspection plans, are available on the NRC website. Current performance information for Surry and North Anna is also [available](#) and updated quarterly.
