

PROGRAM ELEMENTS: REGULATION AND NON-REGULATION

2015- PRESENT

The [Agreement State Program Policy Statement](#) defines “program element” as any component or function of a radiation control regulatory program, including regulations or other legally binding requirements imposed on regulated persons, which contributes to implementation of that program. It identifies those NRC program elements required for “adequacy” and having a particular health and safety component as those that are designated as Compatibility Categories A, B, C, D, NRC, and H&S: and those required for “compatibility” include those regulations and other legally binding requirements designated as Compatibility Categories A, B and C.
