Subject: Radioactive re-cycled materials

DOCKETED
NSRRC

'99 DEC 22 P3:37

Dear Sir / Madam,

I was appalled to read in the Atlanta Constitution that the NRC and DOE are planning to release radioactively contaminated materials to be re-cycled into products for use by the general population. If this is done, it will be a crime committed against the very people these government agencies are supposed to protect.

O.
ADJ.

The article stated that by the NRC's own calculations, that " radiation doses...when received over a lifetime, could cause FATAL cancer in four in 10,000 people." This is unacceptable! ANY fatalities caused by this action would be unacceptable! And what about all of the non-fatal cases of cancer that will result from exposure to these materials? What burden will this put on our society and economy? And worst of all, the most susceptible victims will be our children!

DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

Who needs enemies "foreign or domestic" when our own government is conspiring to POISSON us? Our Nation will not fall to outside forces. We will destroy ourselves by killing our future, our children, with the waste products of our "civilized" technologies.

PLEASE DO NOT DO THIS ! I do not see myself as a reactionary. I am generally conservative. I understand that disposal of such wastes is a complicated issue, but this can not be the answer to the problem.

This truly scares me.
