Mr. Richard Meserve
Attn: Rulemaking and Adjudications Staff

OFFICE
STAFF
ADJUDICATIONS

Mr. Meserve,
I have recently heard that the government plans to solve its hazardous waste problem by dumping radioactive materials into the open market. As this process is already in place, as I understand, I hope that my message gets to you in time for future "dumps" to be prevented.

DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

Since safe levels of radioactivity have yet to be determined, it is very presumptive of you to assume there is no danger. You have no control over where the material will be used and in what concentrations.

I think it is very evil to contaminate the people of American and especially the children, since the program you put in place now will grow exponentially (as all government programs do) to poison the future of our country, unless drastic measures are taken to reel it back in.

How will you be able to sleep at night, knowing that you may be killing your children's children. A nice legacy, don't you think? My Mom always told me, and I believe it with all my heart -
WHAT GOES AROUND, COMES AROUND.

So you will need to be very mindful of which parking lot you park in, which sidewalk you let your grandkids play on, where the playground equipment came from, who poured the concrete that holds up the walls of the water reservoir you get your drinking water from, where your produce was grown, what metal fillers were used in the necklace you buy your daughter, where plastic composites came from that make up 50% of the car that you drive, etc. You get the picture?

You and your family will be living in the same contaminated world you design - so make sure you make the right decision. I know you will.
