NRC

To Whom It May Concern;

Do not release radioactively contaminated material into landfills or the marketplace! Radioactivity is cumulative in the human body. Radiation can destroy, damage, or alter cell makeup. Damage to a cell's DNA can cause mutations that can be passed on to offspring. Alteration of cell structure by radioactive particles can lead to the development of cancers.

DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

Therefore, it is dangerous to introduce into our environment additional sources of radiation besides the sources we already have, such as medical and dental X-rays, radon or uranium in the soil, or microwave ovens.

I urge you to not release radioactive material into the workplace.

Sincerely,

Linda Griggs, M.P.S.
