Subject: NO RADIOACTIVE MATERIAL IN MARKETPLACE!

(64FR35090)

99 DEC 22 AM 10:06

To Officials of the Nuclear Regulatory Commission:

I am horrified by the proposal that the NRC is considering to "release" radioactively contaminated metals, plastics, concrete, soils and other materials from federally monitored sites where they have been generated for energy production or defense purposes - and to "recycle" these extremely hazardous substances into the marketplace, for use in the manufacture and sale of consumer products.

This is completely unacceptable! I further understand that this is not the first time this proposal has come before the NRC. I realize that radioactively contaminated waste is a problem that various parts of the nuclear industry is saddled with. However, this industry must not be allowed to shuffle off this burden into the lives of unsuspecting consumers.

The NRC must say "NO!" to release of radioactive materials, and "NO!" to so-called "recycling" into the marketplace, consumer goods, regular landfills, incinerators or any other situation that affects the health of the biological world.

Vehemently,

Jean C. Ponzi
