DOCKETED
12/29/99

'99 DEC 29 AM 11:21

I received a disturbing mailing from NIRS (Nuclear Info. and Resource Service) stating that a company in Tennessee, British Nuclear Fuels Ltd., is now recycling contaminated uranium metal that's been "cleaned." This is a scary thought.

I do not want nuclear wastes floating around in various metal products. I'm against nuclear power to begin with and now I have a new worry about the wastes being sold to metal recyclers, potentially ending up all over the world.

DOCKET NUMBER
PROPOSED RULE **PR 20**
(64FR35090)

Is there any truth to this and if so, is there anything we can do to stop this process?

Concerned,

Pola Sommers
