SUBJECT: Withdrawal of Application for Amendment of Operating License

Omaha Public Power District (OPPD) submitted the Reference 5 *Application for Amendment of Operating License* in order to delete Section 3.E, *License Term*, from the Fort Calhoun Station (FCS) Unit No. 1 Operating License No. DPR-40. This application included an updated fluence analysis (Westinghouse calculation SE-REA-95-003, *Fast Neutron Fluence Evaluations for the Fort Calhoun Unit 1 Reactor Pressure Vessel*, dated November 1995). The Reference 6 letter provided a revised methodology for calculating RT_{PTS} , as documented in report CEN-636, Rev. 0, from ABB Combustion Engineering Nuclear Power, *Evaluation of Reactor Vessel Surveillance Data Pertinent to the Fort Calhoun Reactor Vessel Beltline Materials – Basis for Prediction of RT_{PTS} for the Fort Calhoun RPV*.

In the Reference 7 letter, the NRC transmitted staff concerns related to the revised ABB methodology for prediction of RT_{PTS} at the expiration of the FCS license. A meeting of NRC, OPPD, and ABB Combustion Engineering Nuclear Power representatives was held at NRC Headquarters on January 6, 2000, to discuss the staff concerns and OPPD plans for resolving the issue. The participants at this meeting agreed that: (1) OPPD should withdraw the Reference 5 license amendment application, and (2) OPPD should subsequently resubmit the application with a revised version of ABB report CEN-636.
