Perry Nuclear Power Plant
Docket No. 50-440
Response to Regulatory Issue Summary 2000-04, "Operating Reactor Licensing Action Estimates"

Ladies and Gentlemen:

On March 16, 2000, the Nuclear Regulatory Commission (NRC) staff issued Regulatory Issue Summary (RIS) 2000-04, "Operating Reactor Licensing Action Estimates," requesting an estimate on the number of licensing submittals for Fiscal Years (FY) 2000 and 2001. Additionally, to adequately capture the larger resource impact of certain licensing reviews, licensees were requested to identify by brief title those licensing actions that are expected to generate complex reviews.

Based on the proposed submittal schedule for the Perry Nuclear Power Plant, there will be approximately seven (7) additional licensing submittals made through September, 2000. Approximately 12 total submittals will be made in FY 2000, and approximately 6 to 8 made in FY 2001. Complex submittals expected include the following: Emergency Core Cooling System changes due to the implementation of the Perform option of the SAFER/GESTR Loss of Coolant Accident model (FY 2000), and Ventilation System changes due to use of the Revised Accident Source Term (FY 2001).

If you have questions or require additional information, please contact Mr. Gregory A. Dunn, Manager - Regulatory Affairs, at (440) 280-5305.

Very truly yours,

for John K. Wood
