NRC TO HOLD PUBLIC MEETING ON PROPOSAL TO TERMINATE
LICENSE OF SHELWELL SERVICES, INC., HEBRON, OHIO

THIS MEETING HAS BEEN CANCELED BECAUSE OF SEVERE WEATHER

The planned Nuclear Regulatory Commission meeting today on the license termination request by Shelwell Services, Inc., in Heath, Ohio, has been canceled because of severe weather conditions.

The NRC staff was to discuss the license termination process, present an update on its reviews and inspections of the company, receive comments from members of the public, and respond to questions.

Shelwell Services, Inc., is located at 645 East Main Street, Hebron, Ohio. The facility is licensed by the NRC to use radioactive material in well-logging and tracer studies of oil and gas wells. In January of this year, the company asked the NRC to terminate its license, as it will no longer be using radioactive material in its business.

A news announcement will be issued when the meeting is rescheduled at a later date.
