NRC RESCHEDULES TWO MEETINGS OCTOBER 31 AT
CRYSTAL RIVER NUCLEAR POWER PLANT

The Nuclear Regulatory Commission staff has rescheduled two meetings postponed from earlier this month at Florida Power Corporation's Crystal River nuclear power plant in Crystal River, Florida.

The meetings had originally been scheduled for October 9 but were postponed for weather reasons and will now be held Thursday, October 31.

The first meeting, scheduled for **11:15 a.m.**, is a special NRC inspection exit meeting to discuss NRC inspection findings concerning a potential tampering event at Crystal River. That meeting will be in the plant's Nuclear Administration Building Conference Room 101.

On September 19, Crystal River employees discovered a coin in a lube oil strainer for one of the plant's emergency diesel generators. The exit meeting will cover the inspection related to that event.

The second meeting, scheduled for 11:30 a.m., is a special meeting requested by the NRC to discuss FPC's corrective actions to address weaknesses in engineering performance at the Crystal River plant. That meeting will be in the same conference room as the first meeting. Both meetings are open to public observation.
