MEMORANDUM TO: Stuart A. Richards, Director
Project Directorate IV & Decommissioning
Division of Licensing Project Management
Office of Nuclear Reactor Regulation

FROM: Steven D. Bloom, Project Manager, Section 2
Project Directorate IV & Decommissioning
Division of Licensing Project Management /RA/
Office of Nuclear Reactor Regulation

SUBJECT: SUMMARY OF MARCH 8, 2000, MEETING WITH WESTINGHOUSE
AND WESTINGHOUSE OWNERS GROUP TO DISCUSS RISK-
INFORMED INSERVICE INSPECTION ADDENDUM TO WCAP-14572,
"WESTINGHOUSE OWNERS GROUP APPLICATION OF RISK-
INFORMED METHODS TO PIPING INSERVICE INSPECTION
TOPICAL REPORT," REVISION 1-NP-A

On March 8, 2000, representatives of Westinghouse Electric Company and the Westinghouse Owners Group (WOG) met with the U.S. Nuclear Regulatory Commission (NRC) staff to discuss the submittal of the risk-informed inservice inspection (RI-ISI) addendum to include augmented inspection programs with RI-ISI, including high energy line break exclusion exams, and flow-assisted corrosion (FAC) exams (WCAP-14572, Revision 1-NP-A, Addendum 1). Attachment 1 is a list of meeting attendees. Copies of the slides used during the meeting are available under ADAMS accession number ML003690237. A copy of the questions that were discussed with Westinghouse and the WOG during the meeting are available under ADAMS accession number ML0036900235. WOG representatives stated that these questions will be answered in a supplemental submittal.

The NRC staff started the meeting by stating that during the acceptance review, the staff determined that the addendum did not cover the issues in sufficient detail to allow its review. During the meeting the NRC indicated that additional information needed to be included in a supplemental submittal to allow the NRC to review the addendum. Some additional information would include referencing of the applicable sections within the original WCAP which contain necessary information, updating programs that would be included under the WCAP addendum, and relying on plant-specific submittals to address certain RI-ISI issues. The supplemental submittal would also need to include more technical details to allow the NRC to review the addendum.
