Docket No. 50-368
License No. NPF-6
Supplemental Information on Reactor Protective System Setpoint Changes -
Electrical and Instrumentation and Control Systems Branch

Gentlemen:

A license amendment request regarding the Arkansas Nuclear One - Unit 2 (ANO-2) reactor protection system setpoints was submitted to the Nuclear Regulatory Commission (NRC) on November 29, 1999 (2CAN119903). In response to an NRC staff question regarding the request, Entergy Operations personnel provided clarifying information during a telephone conference call on March 1, 2000. The purpose of this letter is to confirm the following information that was provided to the NRC during the telephone call.

The setpoint methodology utilized to calculate changes to the reactor protective system and engineered safety features actuation system related instrumentation setpoints (reference the November 29, 1999, submittal) is the same setpoint methodology reviewed and approved by the NRC in License Amendments 137 and 138 regarding the containment building pressure and pressurizer pressure trip setpoints, respectively.

Should further information be desired, please do not hesitate to call.

Very truly yours,

A handwritten signature in black ink, appearing to read "Jimmy D. Vandergriff".
