To summarize our telephone call this afternoon...

RE: WEB Research/NRC telephone call regarding activities on source holder labeling, storage container labeling, and manufacture's test report.

Tom Kent is confirming the following with the manufacturer, then will send a fax:

1. The activity measurement on the manufacturer's "Radioactive source test report No. xxx" provided for each source is the measured value plus/minus the measurement error.
2. The labeling on the container will reflect the activity measurement from the manufacturer's "Radioactive source test report No. xxx" for that source.
3. WEB Research will perform independent verification of the activity measurement for each source to verify the value listed on the manufacturer's "Radioactive source test report No. xxx".
4. The manufacturer's "Radioactive source test report No. xxx" is provided to the user for each source.

If you have any questions, please let me know.

*Also - Storage container activity ~~will~~
does list the tolerance.*
