

June 15, 2000

MEMORANDUM TO: Donald A. Cool, Director
Division of Industrial and
Medical Nuclear Safety, NMSS

FROM: George Pangburn, Director */RA Francis Costello for/*
Division of Nuclear Materials Safety, RI

SUBJECT: TRANSMITTAL OF DNMS MONTHLY MANAGEMENT REPORT

Attached for your review and information is our monthly management report. This document contains information through the end of May 2000, on the status of licensing and inspection for our programs. We have also included information on staff training, Agreement State activities and upcoming decommissioning activities at power reactors for which we have inspection responsibilities. This report is a major tool for Division managers and forms the basis for our monthly review of DNMS programs. We welcome any comments that you may have regarding the content or format of this report.

DECOMMISSIONING AND LABORATORY BRANCH

HADDAM NECK DECOMMISSIONING STATUS

ACTIVITIES COMPLETED LAST MONTH

Completed inspection 00-01 on May 19, 2000, and conducted an onsite exit meeting with site management following an onsite inspection by J. Wray the week of May 15th. Areas of focus were major equipment dismantlement, maintenance and surveillance of equipment important to safety, exposure controls on high dose work activities, and follow up on work performance issues.

The remaining two Reactor Coolant Pumps (RCPs) were removed from containment in May. They are stored on site in the south-east section of the plant along with the steam generator lower assemblies and the pressurizer awaiting shipment to the Barnwell radioactive waste disposal facility.

Dose rates increased in occupied areas of the Reactor Segmentation project. Reactor Segmentation Project is approximately 65% complete with about 60 person-rem expended. The excessive exposures prompted a management call on May 23, 2000, between Region I DNMS management and CYAPCO senior site management. Actions to control personnel exposures were discussed.

SHORT-TERM EXPECTED ACTIVITIES (WITHIN THE NEXT MONTH)

Begin inspection 00-02 with review of major decommissioning work.

- dismantlement of the reactor pressure vessel
- preparations for alternate shipment of Steam Generators and Pressurizer/RCPs

M. Miller to conduct an inspections the weeks of June 5 and June 19.

LONG-TERM EXPECTED ACTIVITIES

Monitor on-site and off-site characterization and remediation activities. Review bounding dose assessment and issue special inspection report for offsite sampling results.

Monitor development of alternate plans for the disposal of Lower Steam Generator Assemblies, Reactor Coolant Pumps, Pressurizer, and Reactor Vessel. The licensee may be unable to ship these components up the Savannah River this year due to continued low water levels.

DECOMMISSIONING AND LABORATORY BRANCH

MAINE YANKEE DECOMMISSIONING STATUS

ACTIVITIES WITHIN THE LAST MONTH

Preparations for getting the four large components ready for the anticipated barge shipments in June continued. The steam generators and pressurizer were being welded to the transport saddles and steel shield walls were being erected on either side of the steam generators. The steam generators were also re-coated with a second application of an industrial coating to insure contamination was fixed in place. An NRC inspector observed the successful loading of the first two steam generators onto the barge. Piping and other commodity removal continued in the Containment Building and the PAB. Emphasis in the Containment Building was to prepare for reactor vessel internals segmentation to commence later this summer.

Mark Roberts and Randy Ragland were onsite the weeks of May 15 - 18 and May 22 - 25, respectively for routine inspection visits for the inspection period that commenced on April 8, 2000 (50-309/2000-02). Primary emphasis for these inspection trips were to view the large component preparation, evaluate offsite dose from the temporary storage of these components, and evaluate steam generator characterization. The Region I mobile laboratory was onsite the week of May 15-19 to perform confirmatory measurements on a variety of licensee sample media. On May 15th, the mobile lab was available for public tours.

Radiation surveys (equivalent to Final Status Surveys) are being conducted in the low-level waste building. This building will serve as the security building for the ISFSI. Additional ISFSI preparations, including relocation of water and drain lines, are also underway.

On the evening of May 15, 2000, NRC management and staff conducted a meeting to hear public comments on the licensee's License Termination Plan (LTP). Ronald Bellamy, accompanied by L. Camper and L. Pittiglio from NMSS, attended the May 4, 2000 meeting of the Community Advisory Panel to discuss LTP activities.

DECOMMISSIONING AND LABORATORY BRANCH

SHORT-TERM EXPECTED ACTIVITIES (WITHIN THE NEXT MONTH)

Preparations will continue to get the large components ready for the June barge shipments. Randy Ragland and Mark Roberts are scheduled to perform inspections the weeks of June 12-15 and June 26-29, respectively, to observe barge loading and transportation and preparations for reactor vessel internals segmentation.

LONG-TERM EXPECTED ACTIVITIES

NMSS will review the License Termination Plan. A request for ORISE to support Region I in the decommissioning review, and be on site in August, is being prepared.

DECOMMISSIONING AND LABORATORY BRANCH

YANKEE ROWE DECOMMISSIONING STATUS

ACTIVITIES WITHIN THE LAST MONTH

Licensee activities for the month included:

- PCB remediation efforts on the VC and drainage areas are on-going.
- Shipment of radioactive waste to SEG for processing and, if necessary low-level radioactive waste burial continued.

SHORT-TERM EXPECTED ACTIVITIES (WITHIN THE NEXT MONTH)

Steve Shaffer will perform an inspection during the week of June 12, 2000. The licensee expects to make their selection of a Decommissioning/Operating Contractor (DOC) by the end of June. The DOC selection may lapse into early July. DOC set-up on-site will take place throughout July.

LONG-TERM EXPECTED ACTIVITIES

Licensee's focus for the next year to two years is on shifting spent fuel storage to dry cask storage. During this period, remediation activities will be put on hold. Emptying the spent fuel pool will allow the remainder of the facility to be decommissioned. The planned work for the next six months includes fuel inspections, ISFSI pad construction, and Cask fabrication.

DECOMMISSIONING AND LABORATORY BRANCH

MILLSTONE UNIT ONE DECOMMISSIONING STATUS

ACTIVITIES WITHIN THE LAST MONTH

The spent fuel pool (SFP) cleanup project is on-going. The third shipment occurred on May 19, 2000. The TN-RAM cask contained control rod blades, velocity limiters, stellite rollers, local power range monitors and other items. The fourth liner has been loaded in preparation for the fourth shipment to Barnwell.

The licensee completed root cause investigations for industrial safety issues (for the several industrial safety events that have occurred) and the inappropriate airborne radioactivity area de-posting event from late April. Both root cause investigations were well developed and identified poor communications, inadequate standards and training, poor organization and human performance issues as both root and contributing causes for both events. However, the licensee has implemented adequate interim corrective actions to address the contributing and root causes that were identified.

Unit 1 separation projects continue. For example, the 4160V project, i.e., transfer from Unit 1 to Unit 3 of the Station Blackout, GDC 17 and App. R support functions for Unit 2, is at the 70% design completion stage. In addition, the three separation projects (new hydrogen skid installation, outage line detection annunciator cable pull, and Unit 2 off-gas system piping work in the Unit 1 stack) that were required to be worked during the Unit 2 outage have been completed.

To date, approximately 200,000 lbs. of insulation (29,000 lbs. of asbestos) have been removed from Unit 1 structures. The project is approximately 51% complete.

SHORT-TERM EXPECTED ACTIVITIES (WITHIN THE NEXT MONTH)

The TN-RAM cask shipment No. 4 is scheduled to occur on June 5th.

The MIDAC will hold a normal monthly meeting on June 1st. Ron Bellamy will provide a discussion regarding the NRC inspection activities at Unit 1.

The construction (mechanical systems/structures) of the spent fuel pool island (SFPI) heat exchanger units is scheduled to begin the first week in June.

Region 1 and NRR safeguards staff will be on-site the week of June 12th to conduct a site security inspection that will include a review of the new protected area design that will separate Unit 1 from Units 2 and 3. (Greg Smith and Barry Manili)

DECOMMISSIONING AND LABORATORY BRANCH

A D&LB inspector will be on-site the week of June 5th in support of the Unit 1 inspection program. (Todd Jackson)

LONG-TERM EXPECTED ACTIVITIES

The Independent Spent Fuel Storage Installation (ISFSI) contractor should be named in June of 2000, with mobilization to occur in September of 2000.

DECOMMISSIONING AND LABORATORY BRANCH

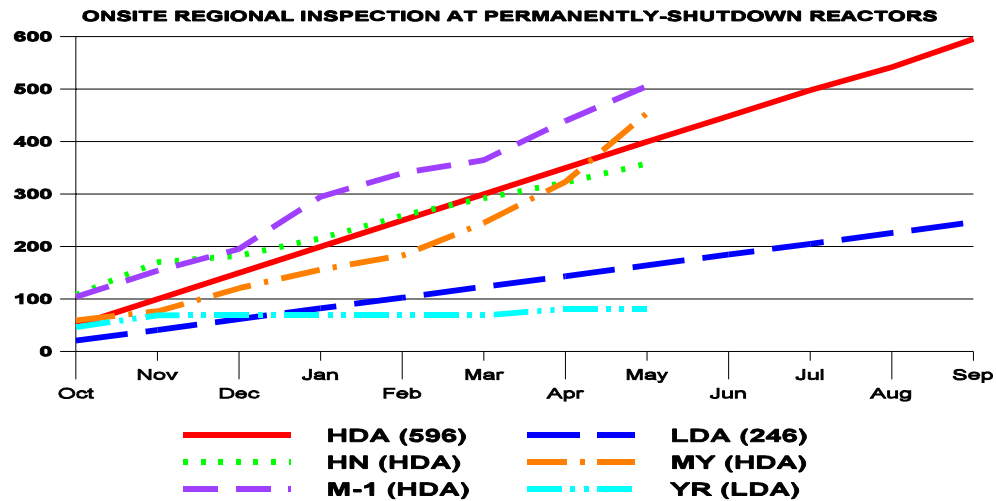

ONSITE REGIONAL INSPECTION EFFORT AT PERMANENTLY-SHUTDOWN REACTORS*

	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Fiscal Year to Date
HN (HDA)	108	62	12	34	43	33	30	36					358
MY (HDA)	59	18	44	35	27	62	78	131**					454
M-1 (HDA)	104	50	42	99	45	25	75	66					506
YR (LDA)	46	23	0	0	0	0	22	0					91

High Decommissioning Activity Guidelines (core) according to MC 2561 is approximately 596 hours.
 Low Decommissioning Activity Guidelines (core) according to MC 2561 is approximately 246 hours.

*Hours do not include in-office allegation followup.

**Inspections of radiation safety aspects of steam generator removal and use of radiological independent measurements van.
