American Electric Power -- DC Cook Nuclear Power Plants
Bob Powers, Chris Bakken, Gary Harland, Robert Godley, et al
One Cook Place, Bridgman MI 49106

Nuclear Regulatory Commission, Region 3
Jim Dyer, Jack Grube, Bruce Bartlett, Claudia Craig, Pam Alloway-Mueller, et al
801 Warrenville Rd, Lisle IL and Rockville MD 60532

Sirs (except Claudia and Pam):

At the meeting yesterday in Bridgeman, with NRC and plant addressing issues of DC Cook's restart, much information was presented, with strong emphasis on safety issues, for which we, the public, are grateful.

However, we, the public, are very concerned with many other issues not addressed. My many appropriate questions were largely evaded at the public meeting and the major questions went unanswered:

1. Yes, we are anxious about the water and air of our shared environment. Did you, and how, consider and provide data on full air/water impacts of restarting Cook? We/I am truly downwind. My unanswered questions regarding the very visual steam released, as well as "permissible emissions" are:
 - a. What radionuclides are in each, such as the noble gasses Krypton and Xenon? What half-lives/full hazardous lives? What biomedical effects? What environmental effects? What agricultural effect -- crops and playground grasses/soil?
 - b. When are the above monitored? How? How often? Where? By whom? Who is informed?
Note: California's San Onofre detected Tokaimura fallout 3 weeks after the incident in October. Our Grand Rapids Emergency Management Director acknowledges his equipment is not adequate to measure this, and relies on nuclear plant monitoring to notify State Police and his office. What monitoring and results has Cook registered? What are restart-connected plans?
 - c. What projections on the above are made for Cook restart? What plans for public awareness and protection?
 - d. What is Cook radioactive waste storage situation? What capacity/timeline?
What cask storage/off-load plans and data? You commented

2. Is/was NRC authorized to fine up to \$110,000 for each of the 44 uncorrected violations since Three Mile Island requirements to take plant initiatives? You explained afterwards that the intention of NRC fines is "to get their attention" rather than debilitating. And your comments on the losses during shutdown also ducks the issue of industry/agency responsibility and self-management. How can the public accept such past irresponsibilities and current/future plans?

3. Additionally, what monitoring is/has been shared "periodically" (??) with State Police and local emergency management

bodies?

I/we will appreciate data in hard copy on the above, and any other data you feel is important.

Thank you

Onward -- adelante/allons in peacism -- heiwa/salam/mir

To Cook & NRC -
Oops - could I have neglected
to send the enclosed??
Not having received your
responses, my apologies -
and concerns that these &
other updates occur ASAP.

Thanks -

Onward
in peace.

IS WTO: WORLD TRADE ORGANIZATION
* IMF + World Bank

OR

WORLD TRADE-OFF OPERATION?

1. The WTO prioritizes commercial or trade considerations over all other (noncommercial) values, adopting irresponsible "least trade restrictions".
2. WTO undermines democracy. Its rules have harsh penalties of economic sanctions for violations, the overriding of weakened environmental, human rights, labor, and health local and national laws. WTO regulations are difficult to confront, appeal, reverse or get public input.
3. WTO not only regulates, but actively promotes global trade at the expense and exploitation of communities and regions.
4. WTO hurts the Third World by forcing their markets open to multinationals and leaving domestic infant industries and agriculture unprotected, forcing massive dislocation of many millions of rural people and ways.
5. WTO eviscerates the Precautionary Principle, requiring unscientific and unnecessary "full proof" rather than reasonable doubt on health and environment issues.
6. WTO squashes diversity through "harmonization", global sameness.
7. WTO limits government spending for area social problems, or "green" and human rights purchasing.
8. WTO operates in secrecy. Tribunals decide behind closed doors, prioritizing commerce over environment, health, human rights, sustainability.
9. WTO disallows bans on imports made by violating child labor, worker rights, human health, and environmental pollution. (even origin labels!)
10. WTO legitimizes life patents for sale for profit, including traditional seeds.

Because of the many unfixable problems, and abysmal record of WTO policies undermining democracy, human and environmental respect, WTO needs to be shut down, sooner rather than later, using interim limits to WTO power globally.

Grand Rapids will hold a Calder Plaza Rally and March to oppose the World Bank and International Monetary Fund Conference now meeting in Washington DC on Monday, April 17, from 3 to 6pm.

The following is a summary of Friends of Earth email from grassroots@tao.ca (Grassroots Media Network) calling for immediate ban on financing extractive oil, gas and mining projects and shifting to sustainable and community building projects.

.....[Unsustainable model[s] of economic development have failed the world's poor in the 20th century.....To endorse send name, organization and country to szdeb@foe.org "

Ten Reasons World Bank Group should Stop Financing Oil, Gas and Mining Projects in Poor Nations:

1. The Poor often pay the highest price, forced off their land, polluted, services cut.
2. Indigenous Communities are jeopardized, devastated in lives, culture, lands.
3. Leads to Forest Destruction and Biodiversity loss, irreversibly.
4. Toxic Contamination through spills, leaks, emissions in groundwater, soil, livestock, marine resources.
5. Negatively impacts women, families, jobs, water, fuelwood.
6. Tied to Human Rights Abuses, forced relocations, suppression.
7. Ties with corrupt governments. See watchdogs Transparency International.
8. Supports Corporate Welfare, funds e.g. Exxon whose annual profits are 40 times the budget of Chad, with little "trickle down".
9. Extractive/fossil industries fuel global climate change, spends 25 times more than on renewables.
10. Increases Debt and Dependency, exploiting natural resources and export crops.

Ten Better Examples of Good Development:

1. Support education and technical training.
2. Promote healthy societies, treat easily preventable diseases like diarrhea.
3. Support micro industries in local economies.
4. Build strong agricultural sectors, respond to people's needs.
5. Deliver energy to the rural poor, renewables more viable in remotes.
6. Improve quality of life in urban areas, public transit, city planners.
7. Develop productive alternatives to deforestation, wood substitutes, ecotours.
8. More efficient use of water [irrigation uses 50%].
9. Promote energy efficiency and renewables, rather than fossil fuels. *or nuclear!*
10. Immediate debt cancellation for poorest, relief for middle nations. Recognize past ecological debts by exploitations.
