

UNITED STATES
NUCLEAR REGULATORY COMMISSION
REGION II
SAM NUNN ATLANTA FEDERAL CENTER
61 FORSYTH STREET SW SUITE 23T85
ATLANTA, GEORGIA 30303-8931

May 10, 2000

The Honorable James Fielding
Mayor, City of Port St. Lucie
121 S.W. Port St. Lucie Blvd.
Port St. Lucie, FL 34984

Dear Mayor Fielding:

The U. S. Nuclear Regulatory Commission (NRC) recently revised its reactor inspection and oversight program. These revisions change the manner in which we conduct safety inspections and assess performance at NRC-licensed nuclear power plants, such as Florida Power & Light's St. Lucie plant near you.

We recently completed a six month pilot test of the revised program at selected facilities and concluded that the revised process is more objective, timely, and focuses us on the areas of greatest risk and safety significance. In April, the NRC applied this process to all 103 operating nuclear power reactors. We believe this process will allow the NRC to maintain safety, improve efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These improvements will also ensure that the nuclear industry continues to operate in a way that best protects public health and safety.

An important feature of the new process is that you, through the NRC Web site, will have access to the same information we use in our quarterly assessment of plant performance. This information may be accessed at <http://www.nrc.gov/NRR/OVERSIGHT>.

Enclosed is a news release announcing a public meeting in your area to discuss the new program. It will be at 7:00 p.m. on May 24, 2000, at Holiday Inn Oceanside on Hutchinson Island in Jensen Beach, Florida, and I am inviting you, and other members of your organization, to attend if you are interested in learning more about the revised process. We have also enclosed additional information describing the new reactor inspection and oversight program.

Sincerely,

/RA/

Leonard D. Wert, Chief
Reactor Projects Branch 3
Division of Reactor Projects

efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These improvements will also ensure that the nuclear industry continues to operate in a way that best protects public health and safety.

An important feature of the new process is that you, through the NRC Web site, will have access to the same information we use in our quarterly assessment of plant performance. This information may be accessed at <http://www.nrc.gov/NRR/OVERSIGHT>.

Enclosed is a news release announcing a public meeting in your area to discuss the new program. It will be at 7:00 p.m. on May 24, 2000, at Holiday Inn Oceanside on Hutchinson Island in Jensen Beach, Florida, and I am inviting you, and other members of your organization, to attend if you are interested in learning more about the revised process. We have also enclosed additional information describing the new reactor inspection and oversight program.

Sincerely,

/RA/

Leonard D. Wert, Chief
Reactor Projects Branch 3
Division of Reactor Projects

Enclosures: As stated

May 10, 2000

Mr. Jack Southard
Director, St. Lucie County
Department of Public Safety
101 North Rock Road
Ft. Pierce, FL 34945

Dear Mr. Southard:

The U. S. Nuclear Regulatory Commission (NRC) recently revised its reactor inspection and oversight program. These revisions change the manner in which we conduct safety inspections and assess performance at NRC-licensed nuclear power plants, such as Florida Power & Light's St. Lucie plant near you.

We recently completed a six month pilot test of the revised program at selected facilities and concluded that the revised process is more objective, timely, and focuses us on the areas of greatest risk and safety significance. In April, the NRC applied this process to all 103 operating nuclear power reactors. We believe this process will allow the NRC to maintain safety, improve efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These
