

UNITED STATES
NUCLEAR REGULATORY COMMISSION
REGION II
SAM NUNN ATLANTA FEDERAL CENTER
61 FORSYTH STREET SW SUITE 23T85
ATLANTA, GEORGIA 30303-8931

May 31, 2000

Mr. Cotton E. Howell, Director
York County Office of
Emergency Management
P. O. Box 11706
Rock Hill, SC 29731-1706

Dear Mr. Howell:

The U. S. Nuclear Regulatory Commission (NRC) recently revised its reactor inspection and oversight program. These revisions change the manner in which we conduct safety inspections and assess performance at NRC-licensed nuclear power plants, such as Duke Energy Corporation's Catawba plant.

We recently completed a six month pilot test of the revised program at selected facilities and concluded that the revised process is more objective, timely, and focuses us on the areas of greatest risk and safety significance. In April, the NRC applied this process to all 103 operating nuclear power reactors. We believe this process will allow the NRC to maintain safety, improve efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These improvements will also ensure that the nuclear industry continues to operate in a way that best protects public health and safety.

An important feature of the new process is that you, through the NRC Web site, will have access to the same information we use in our quarterly assessment of plant performance. This information may be accessed at <http://www.nrc.gov/NRR/OVERSIGHT>.

Enclosed is a news release announcing a public meeting in the area of the Catawba plant to discuss the new program. It will be at 7:00 p.m. on June 21, 2000, at the City Hall in Rock Hill, South Carolina. I am inviting you, and other members of your organization, to attend if you are interested in learning more about the revised process. We have also enclosed additional information describing the new reactor inspection and oversight program.

Sincerely,

/RA/

Charles R. Ogle, Chief
Reactor Projects Branch 1
Division of Reactor Projects

We recently completed a six month pilot test of the revised program at selected facilities and concluded that the revised process is more objective, timely, and focuses us on the areas of greatest risk and safety significance. In April, the NRC applied this process to all 103 operating nuclear power reactors. We believe this process will allow the NRC to maintain safety, improve efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These improvements will also ensure that the nuclear industry continues to operate in a way that best protects public health and safety.

An important feature of the new process is that you, through the NRC Web site, will have access to the same information we use in our quarterly assessment of plant performance. This information may be accessed at <http://www.nrc.gov/NRR/OVERSIGHT>.

Enclosed is a news release announcing a public meeting in the area of the Catawba plant to discuss the new program. It will be at 7:00 p.m. on June 21, 2000, at the City Hall in Rock Hill, South Carolina. I am inviting you, and other members of your organization, to attend if you are interested in learning more about the revised process. We have also enclosed additional information describing the new reactor inspection and oversight program.

Sincerely,

/RA/

Charles R. Ogle, Chief
Reactor Projects Branch 1

Dear Mr. Alexander:

The U. S. Nuclear Regulatory Commission (NRC) recently revised its reactor inspection and oversight program. These revisions change the manner in which we conduct safety inspections and assess performance at NRC-licensed nuclear power plants, such as Duke Energy Corporation's Catawba plant.

We recently completed a six month pilot test of the revised program at selected facilities and concluded that the revised process is more objective, timely, and focuses us on the areas of greatest risk and safety significance. In April, the NRC applied this process to all 103 operating nuclear power reactors. We believe this process will allow the NRC to maintain safety, improve efficiency, and reduce unnecessary regulatory burdens on the reactor operator. These improvements will also ensure that the nuclear industry continues to operate in a way that best protects public health and safety.

An important feature of the new process is that you, through the NRC Web site, will have access to the same information we use in our quarterly assessment of plant performance. This information may be accessed at <http://www.nrc.gov/NRR/OVERSIGHT>.

Enclosed is a news release announcing a public meeting in the area of the Catawba plant to discuss the new program. It will be at 7:00 p.m. on June 21, 2000, at the City Hall in Rock Hill, South Carolina. I am inviting you, and other members of your organization, to attend if you are interested in learning more about the revised process. We have also enclosed additional information describing the new reactor inspection and oversight program.

Sincerely,

/RA/
