SUBJECT: SUMMARY OF MEETING TO DISCUSS SINGLE LOOP  
CONTROLLERS

On June 13, 2000, representatives of the Electric Power Research Institute (EPRI) met with the staff of the Nuclear Regulatory Commission (NRC) to discuss the EPRI report on single loop controllers. Attachment 1 is a list of meeting attendees. Copies of the slides used during the meeting are available under ADAMS accession number ML003723659.

EPRI discussed a generic qualification project that represented a pilot application of the EPRI COTS guideline (TR-106439). EPRI and the utility representatives discussed the type and the content of the submittal to the NRC that would result from this qualification project, the mechanisms for staff feedback, the cost and schedule of the review, and the benefits and usefulness of the submittal in future implementations of single loop controllers. Although the main focus of the meeting was on single loop controllers, several other instrumentation components were also discussed. The following three options were discussed: (1) submitting to the NRC a detailed qualification report for each vendor and model number, (2) submitting a generic report that is not specific to any vendor or model, and (3) submitting nothing. The staff expressed its opinion of these three options and discussed the review effort for each option. EPRI will consider the staff's opinions and, in the near future, choose one of the options.
