Generic Issues, Environmental, Financial  
and Rulemaking Branch  
Division of Regulatory Improvement Programs  
Office of Nuclear Reactor Regulation

SUBJECT: REQUEST INPUT FOR JULY SBREFA REPORT

The Generic Issues, Environmental, Financial and Rulemaking Branch (RGEB) is responsible for collecting and reviewing the NRR input of final actions covered by the Small Business Regulatory Enforcement Fairness Act (SBREFA or the Act) before forwarding it to the Rules and Directives Branch (RDB). The typical NRR actions covered by the Act, as advised by OGC, include final rules, standard review plans, branch technical positions, bulletins and generic letters that provide new interpretations of law or policy, and inspection manuals that substantially affect rights or obligations of non-agency parties, etc. After collecting all NRC offices' input, the RDB will submit it to OMB for review, as required by the Act.

To ensure compliance with the Act, we are requesting from each division a summary description of each final action for which your division is responsible and for which the anticipated issue date is within 90 days after the date of this memorandum. An example of a summary description is attached for your use (Attachment 1). Summary descriptions should be provided via E-mail to Peter Wen (E-mail address: PXW) by August 1, 2000. Negative replies are also requested. Attachment 2 includes a list of previously submitted NRR items that have been identified as potential "rules" under SBREFA. These items need not be resubmitted.

If you or your staff have any questions regarding this request, please contact Peter Wen at 415-2832.

AGENCY: Nuclear Regulatory Commission

TITLE OF ACTION: Respiratory Protection and Controls to Restrict Internal Exposures (10 CFR Part 20)

LEVEL OF SIGNIFICANCE: Non-major rule

UPCOMING ACTION: Final rule

AGENCY IDENTIFICATION: RIN No. 3150-AF81 (RM#269)

DATE OF ISSUANCE: Estimated September 1999

STATUTORY OR JUDICIAL DEADLINE: N/A

DESCRIPTION OF ACTION: The Commission is amending its regulations at 10 CFR Part 20, Subpart H regarding the use of respiratory protection and other controls to restrict intake of radioactive material. The amendments make these regulations more consistent with the philosophy of controlling the sum of internal and external radiation exposure, reflect current guidance on respiratory protection from the American National Standards Institute (ANSI), are consistent with recently effective revisions to OSHA's respiratory protection rule, and make NRC requirements for radiological protection less prescriptive without reducing worker protection. The amendments provide greater assurance that worker dose will be maintained as low as is reasonably achievable (ALARA) and that recent technological advances in respiratory protection equipment and procedures are reflected in NRC regulations and clearly approved for use by licensees. The amendments reduce licensee burden by deleting requirements that are no longer needed, are redundant, or are no longer technically correct.
