Subject: Indian Point Units 1 and 2 Physical Security Plan - Revision No. 20

Enclosed are pages for controlled copies of Revision No. 20 to the Indian Point 1 and 2 Physical Security Plan. This revision is submitted in accordance with the provisions of 10CFR50.54(p).

We have determined that the changes do not decrease the safeguards effectiveness of the Physical Security Plan for Indian Point Units 1 and 2.

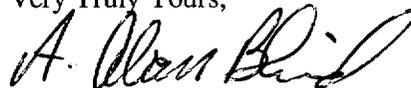

Revision 20 is an addition to Chapter 9 which discusses special measures during major maintenance or refueling operations. This revision outlines the process for reclassification of certain areas due to a change of status of the functional capability of equipment in the areas. This revision will apply to cold shutdown during a planned Steam Generator Replacement Outage where there will be substantial work requiring extensive use of temporary workers.

Revision 20 of the Physical Security Plan supports steam generator replacement activities, and will cease to be effective and will be deleted from the Plan following completion of restoration activities contained herein.

In accordance with 10 CFR Sections 2.790(d) and 73.21, correspondence and reports to and from the NRC that identify a licensee's control of and detailed security measures for, the physical protection of a licensed facility are exempt from public disclosure. We understand, therefore, that the enclosure to this letter will not be placed in the Public Document Room and will receive limited distribution.

Should you or your staff have any questions regarding this matter, please contact Mr. John McCann, Manager, Nuclear Safety and Licensing.

Very Truly Yours,

Enclosure
