Mr. A. Alan Blind
Vice President, Nuclear Power
Consolidated Edison Company
of New York, Inc.
Broadway and Bleakley Avenue
Buchanan, NY 10511

SUBJECT: CHANGE IN LICENSEE COMMITMENT REGARDING TESTING, INDIAN POINT
NUCLEAR GENERATING UNIT NO. 2

Dear Mr. Blind:

In letters dated August 2 and 4, 2000, you informed the U.S. Nuclear Regulatory Commission (NRC) of a proposed change to the commitments made in your letter of June 30, 2000, regarding testing at the Indian Point Nuclear Generating Unit No. 2. Specifically, you are now requesting to operate the plant as needed below 350 °F in accordance with your current licensing and design basis in order to perform additional testing and maintenance. In the June 30 letter, you had stated that, following completion of planned testing activities, the plant would be returned to the cold shutdown condition and "remain there until NRC approval for startup is received." In your August 4 letter, you corrected the references listed in the August 2 letter.

The NRC staff has no objection to this change in commitment and recognizes that you will continue to operate the plant within the current licensing basis to conduct routine testing and maintenance. The staff continues to evaluate your steam generator operational assessment to support operation of the plant for a limited period with the existing steam generators. Until such time that the NRC reaches a decision in this regard, the facility Technical Specifications preclude increasing reactor coolant system temperature above 350 °F.

We encourage you to keep your stakeholders informed of this and other decisions regarding changes in plant status.

Sincerely,

/RA/

Patrick D. Milano, Senior Project Manager, Section 1
Project Directorate I
Division of Licensing Project Management
Office of Nuclear Reactor Regulation
