

EX6

[REDACTED]

April 30, 1982

Gentlemen:

The enclosed newspaper articles are submitted to all listed in the hope that the ultimate responsible party will take immediate action to remove the potential killer from my neighborhood.

The article states that a survey will be taken in order to determine the degree of radiation and that the results will not be available for four to six months. This statement is completely unacceptable since all would agree that the bureaucratic red-tape would be cut and the level of urgency would be intensified one hundred fold if this radioactive waste was uncovered in the New Jersey State Capital or on the White House lawn. Admittedly, my concern is self-serving; however, the lives and safety of my family is of paramount importance second to no one.

I demand that this life threatening radioactive material be removed from my neighborhood immediately.

Please call me during the day [REDACTED] or evening [REDACTED] advising me of the date of removal of this radioactive material.

EX6

Sincerely.

Dear [Redacted]

EX 6

Your letter dated April 12, 1985 requested additional Forms AEC 4 for the Rare Earths and W. R. Grace, Davison Chemical Division at Black Oak Ridge Road, Wayne, New Jersey. Attached are copies of all the Forms AEC 4 in the relevant files. I believe you have these, but this seems the easiest way to be sure. In addition, I have enclosed other forms with similar information. Some of these are in very poor condition, and these are the best copies we could make.

If I can be of additional assistance do not hesitate to contact me.

Sincerely,

May 29 1982

Dear Mr. Bradley

I am a resident of Wayne, New Jersey, and am writing to you concerning a problem in this township which the public has just been made aware of recently.

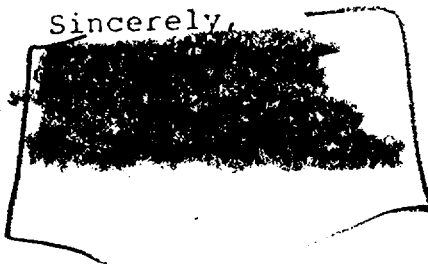

Between 1947 and 1974, industries located along Black Oak Ridge Road in Wayne buried approximately 20,000 Pounds of Radioactive Thorium. This thorium, once considered safely buried, has now become cause for concern. Radiation has been detected in this area by the Nuclear Regulatory Commission in amounts of ten to twenty-five times higher than normal levels. Furthermore, thorium has also been detected along the banks of the Sheffield Brook which runs along Deerfield Road, a residential area.

As a PARENT, HOMEOWNER, AND RESIDENT of Wayne, New Jersey, I am extremely concerned about this situation. The thorium which is buried here poses a potential health hazard to the people who reside in this township, as well as possibly detracting from the desirability of our property.

Radioactive waste does not belong in a residential area such as Wayne. I urge you to assist our community in facilitating the removal of thorium from this site.

Thanking you in advance for your interest and cooperation in expediting this matter.

Sincerely,

Dear Senator Bradley,

I am a resident of Wayne, NJ and am writing to you concerning a problem which should have been just been made aware of recently.

Between 1947-1974, uranium located along Black Oak Ridge Road in Wayne buried approximately 30,000 pounds of radioactive thorium. This thorium has become a cause for concern. Radiation has been detected in this area by the Nuclear Regulatory Commission in amounts of 10 to 25 times higher than normal levels. Furthermore thorium has also been detected along the banks of the Sheffield Brook.

As a parent & homeowner of Wayne, NJ I am extremely concerned about this situation. The thorium which is buried here poses a health hazard to the people who live here.

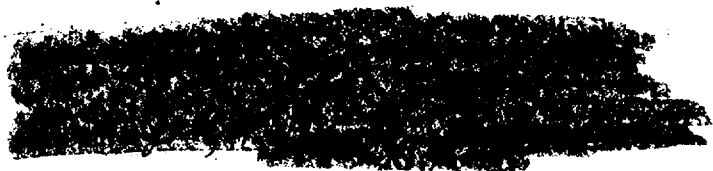

Radiation waste does not belong in a residential area. I urge you to assist our community in facilitating the removal of thorium from this site. Thank you in advance for your interest & cooperation.

EX6

Dear 

Subject: Measurements of Radioactivity and Radiation Levels at Farm View Stand

This refers to the measurements of radiation levels and samples of water and soil taken by Ms. M. Campbell of this office on April 28, 1982. As discussed with you during our visit, no radiation levels above background were measured in the areas used by Farm View Stand for raising produce. The sample of soil taken by Ms. Campbell was analyzed in the USNRC Region I Laboratory using an intrinsic germanium detector coupled to a multichannel analyzer. This analysis showed no concentrations of radioactive materials above background levels. The samples of water from your four water supplies were analyzed by Oak Ridge Associated Universities in their laboratories in Oak Ridge, Tennessee. The analyses showed that all of the samples of water taken met standards set by the U.S. Environmental Protection Agency for radioactive materials in drinking water. From these analyses, we conclude that the produce grown at your farm will not contain radioactive material in excess of normal background levels.

If you have additional questions, please contact Ms. Campbell or myself at (215) 337-5252.

Sincerely,

John D. Kinneman, Chief

Docket No. 40-00086

License No. STA-422

EXL

Dear 

Subject: Radiation Surveys of the W. R. Grace and Company Property in Wayne, New Jersey

The Nuclear Regulatory Commission is reviewing the status of a number of manufacturing facilities around the country which were formerly licensed by the Atomic Energy Commission (AEC). As you may know, a number of the facilities in northern New Jersey which used radioactive material in the 1940's and 1950's were later found to have residual onsite and/or offsite contamination. One of the facilities which was licensed by the AEC was Rare Earths, Incorporated, located at 868 Black Oak Ridge Road in Wayne, New Jersey. This company was licensed to extract thorium, a naturally-occurring radioactive material, from monazite sand. In 1957 these activities were taken over by the Davison Chemical Division of W. R. Grace and Company. A summary of the historical background of this facility is enclosed for your information.

Our preliminary surveys of the W. R. Grace and Company property have found radiation levels in excess of current criteria for release for unrestricted use. Although these radiation levels do not pose any immediate hazard to the health and safety of individuals living near or frequenting the areas around the property, additional surveys and evaluations seem appropriate. The results of these surveys will be used to determine if additional actions are required.

We have arranged for an NRC contractor, Oak Ridge Associated Universities (ORAU), to perform additional surveys on the W. R. Grace and Company property. These surveys will involve walking across the ground to measure surface radiation levels, and collecting surface and subsurface soil samples. The subsurface soil samples will be collected using a truck-mounted drill which makes a 6" to 10" diameter hole, which afterward will be filled in.

Your property on Black Oak Ridge Road is immediately adjacent to the W. R. Grace and Company property. We request your permission to have the contractor, ORAU, perform radiological surveys of the type described in this letter on your property, along the border next to the W. R. Grace and Company. The surveys will probably be performed during July, depending on the weather and scheduling of other work. Please sign the enclosed permission form and return it in the enclosed envelope.

If you have questions, you may call this office collect, and speak to Ms. Myu Campbell (215-337-5246) or Mr. John Kinneman (215-337-5252).

EX6

Dear [REDACTED]

I have been asked to respond to your letter to President Reagan regarding radioactive residues which were buried in Wayne, New Jersey.

The U.S. Nuclear Regulatory Commission and the Department of Energy have been working with the New Jersey Bureau of Radiation Protection to identify all affected areas and determine what actions to take. To my knowledge, no deaths or illnesses have been associated with the burial of these residues, which are thorium tailings, not the pure metal.

I have enclosed some information for you. However, if you wish to have additional information, I suggest you write to the following address:

New Jersey Bureau of Radiation Protection
380 Scotch Road

Dear

Subject: Testing of Well Water

One of our inspectors, Dr. Laurence F. Friedman will be in your area on Wednesday afternoon, August 4, 1982. If you can arrange to meet him, please call him Tuesday evening, August 3, 1982, at the Holiday Inn, Kenilworth, New Jersey (201) 241-4100, to make arrangements.

If this is not convenient, call me collect at (215) 337-5252, to make alternate arrangements. Since you have an unpublished phone number, please indicate in any contacts how we can reach you.

Sincerely,

John D. Kinneman, Chief
Materials Program Section No. 1

Dear Mr. Chairman:

As part of the Commission's investigation into radiation levels at the W.R. Grace property in Wayne, New Jersey, I would appreciate a comprehensive response to the enclosed letters from Ms. Karen Lieberman and Ms. Gail Van Dyken, representatives of the Concerned Citizens Committee.

Now that the preliminary testing has been completed some of their questions seem particularly appropriate.

Your swift cooperation is appreciated.

With all good wishes.

Sincerely,

Robert A. Roe
Member of Congress

July 14, 1982

The Honorable Robert A. Roe
Member of Congress
House of Representatives
Washington, D.C. 20515

Dear Representative Roe,

In our letter of July 2, 1982, reference was made to a follow-up list of concerns to be initially explored or investigated in further depth. Below is a listing of those items:

- (1) Release to our committee, report prepared by NRC Docket # PNO-I-82-126
Subject : W.R. Grace & Co. Radioactive Waste
DAMD Update
- (2) Re-evaluation of water sources in Wayne.
 - (a) Since water acts as a protective shield for radium, the aerial survey (May '81) could not have detected its presence, therefore:
 - (b) NRC must take test samples of water and sediment from Sheffield Brook, Pompton River and water supplies for Kuehn's Farm, Black Oak Ridge Road
- (3) Since Radon Gas is always present where Radium exists the NRC must test for the presence of this gas.
- (4) Subsequent to the completion and review of initial test results by ORAU, a medical assessment committee must determine the present and long term effects of exposure to this radioactive material on the health of township residents; especially the children.
- (5) Please identify the methods of assessment and instrumentation employed by N.R.C. for detection of radioactive contamination.

- (6) What is the present usage (and by whom) of the former Nike Base on Alps Road?
- (7) Investigation and report regarding present activities (identified only as "classified government work") being performed by ENI on location - 86E Black Oak Ridge Road.
- (8) Inquiry into activities of W.R. Grace & Co. Chattanooga, Tennessee; Co. (reportedly owns the largest industrial stockpile of thorium in U.S.) What are the present and future plans for utilization of this material?
- (9) J. Peter Grace was recently appointed head of President Reagan's watchdog spending committee. Our concern is that his position could directly and or indirectly affect the interpretation by the EPA of the test data relating to the radioactive waste dump (in Wayne) owned and operated by the Grace Company.
- (10) Our committee is very concerned regarding past and present liasons among ORAU, ENI, and U.S. Government Nuclear Facility, all located in Oak Ridge Tennessee. Please investigate the relationships above forementioned.

Kindly respond, in writing to each item at your earliest convenience and supply reports, documents, transcripts of interviews, project contracts, letters, memos, inter-office communiques, etc., as substantiation for replies.

Sincerely,

Karen Lieberman
Representative for
Concerned Citizens Committee

July 2, 1982

Rep. Robert A. Roe
158 Boonton Road
Wayne, New Jersey 07470

Dear Congressman Roe:

Our committee expresses appreciation for the informative meeting held July 1, 1982, in Wayne Township. Your patience, directiveness and candor were exemplified by your statements and responses to queries raised by the participants of that meeting.

The committee acknowledges your continuing efforts pursuant to this situation and noted that you addressed the following issues:

1. Broadening the scope of the initial survey.
2. Determination of soil removal from area.
3. Improvement of intercommunication among agencies on all governmental levels.
4. The clarification of NRC methods of measurement and assessment.
5. Acceleration of timetable for testing.

As per your request, our committee will submit in writing a list of additional concerns which will necessitate further investigation. In the future, we require that all replies to our inquiries be in written form and substantiated by documentation.

We look forward to your attendance at our meeting on July 8, 1982, at the Wayne Civic Center, Hamburg Turnpike, scheduled to 8:00 p.m.

Sincerely,

Gail Van Dyken

EX 6

Dear [Redacted]

As we discussed earlier, three major types of analyses were performed on the water sample you provided. These were, gamma spectrometry, alpha spectrometry, and gross alpha. The results indicate levels of radioactivity at or below the levels normally encountered in water samples in the United States.

While the results of the gamma spectrometry analyses are too involved to summarize here, the gross alpha and alpha spectrometry results can be:

| <u>Analysis</u> | <u>Concentration (picocurie per liter)</u> |
|-----------------|--|
| Gross Alpha | <2.2* |
| Th-228** | <1 |
| Th-230 | <1 |
| Th-232 | <1 |
| U-234 | <1 |
| U-235 | <1 |
| U-238 | <1 |

*This indicates that the activity is below 2.2 picocuries per liter (the minimum activity capable of being measured in our analysis).

**These refer to the various isotopes of thorium and uranium, looked for by alpha spectrometry.

While no limits have been established for uranium or thorium concentrations in water, the Environmental Protection Agency has established maximum allowable levels of gross alpha activity in drinking water. These regulations are somewhat complex but can be summarized as follows:

ITEM # 31
 # ~~XXXXXXXXXX~~

E/27

Information in this record was deleted
 in accordance with the Freedom of Information
 Act, exemptions 6
 FOIA- 2000-0101

(3)

EX6

August 27, 1982

The maximum allowable gross alpha activity in drinking water is 15 pCi/liter (the level in your water is less than 2.2 pCi/liter). This level, i.e. the allowable level, does not include radon or uranium.

Other radionuclides specifically analyzed for included the following isotopes of radium and polonium:

| | |
|--------|-------|
| Ra-228 | <0.6 |
| Ra-226 | <0.07 |
| Po-210 | <0.3 |

The EPA drinking water regulations allow a maximum level of 5 picocuries per liter of Ra-228 and Ra-226 combined. The combined levels in your water would be less than 0.67 (i.e., 0.6 + 0.07), well under the permitted levels.

It must be emphasized that our tests were capable of detecting only radioactive material. Chemical or bacterial components in the water were not analyzed for.

If you have any further questions, please feel free to contact me.

Sincerely yours,

Paul W. Frame

Dear 

This is in response to your letter to the President of the United States dated June 4, 1982. As you are probably aware, this Office of the Nuclear Regulatory Commission has been reviewing situations involving the thorium waste buried on Black Oak Ridge Road in Wayne for some time. From the extensive surveys conducted by inspectors from this office, by our contractor, Oak Ridge Associated Universities, and by representatives of the State of New Jersey, we have concluded that the presence of this material does not present an immediate hazard to the residents of Wayne. The results of these surveys will be provided in reports being prepared by Oak Ridge Associated Universities. We have placed your name on the mailing list for a copy of this report.

We have contacted the Department of Energy concerning this matter. The Department of Energy has told us that they will consider this site for incorporation in the Formerly Utilized Site Remedial Action Program. This is a program where site materials were produced for the use by the former Atomic Energy Commission are evaluated to determine whether they present a short and/or long term hazard to the public and/or community in which they are located. If such a hazard is identified, corrective actions are taken to reduce or eliminate the hazard. Such consideration cannot be carried out by the Department of Energy until they receive the results of our report. We will forward these reports to the Department of Energy as soon as we complete them.

We understand your concerns and are working to resolve them. I hope this information is of assistance to you.

Sincerely,

Original Signed By:

Dear [Redacted]

As you requested in the telephone conversation with Ms. Campbell of this office on September 8, 1982, a copy of Inspection Report No. 99990001/82-03 is enclosed. This report documents the surveys of your property conducted by Ms. Campbell; section 3.b and Appendix 1 specifically refer to your property. As Ms. Campbell discussed with you, we believe that there is no hazard to yourself or your family from the radiation levels measured on your property. As you are probably aware, Oak Ridge Associated Universities conducted extensive measurements on the W. R. Grace property which is next to yours. We expect a report of these measurements will be available in early 1983 and will provide you with a copy.

Thank you for your cooperation with us. If you have additional questions, please feel free to contact us.

Sincerely,

Dear [Redacted]

Earlier this year you provided a drinking water sample to our contractors Oak Ridge Associated Universities. The results of the analysis of this sample for radioactivity are contained in the enclosed Radiological Survey of Sheffield Brook, Wayne, New Jersey dated October 1982.

Your sample is number 18 on page 52. These results indicate the water you supplied is well within the standards of the U.S. Environmental Protection Agency for radioactivity in drinking water.

If you have any questions concerning these results, you may call me at 215-337-5252.

Sincerely,

ITEM # 68

E/62

NOV 14 1982

Burt
NRC

Dear Mr. Brady,

I am a resident of Wayne, New Jersey, and am writing to you concerning a problem in this township which the public has just been made aware of recently.

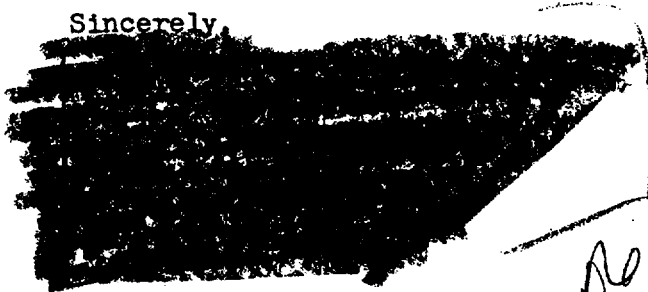

Between 1947 and 1974, industries located along Black Oak Ridge Road in Wayne buried approximately 20,000 pounds of radioactive thorium. This thorium, once considered safely buried, has now become cause for concern. Radiation has been detected in this area by the Nuclear Regulatory Commission in amounts of ten to twenty-five times higher than normal levels. Furthermore, thorium has also been detected along the banks of the Sheffield Brook which runs along Deerfield Road, a residential area.

As a parent, homeowner & resident of Wayne, New Jersey, I am extremely concerned about this situation. The thorium which is buried here poses a potential health hazard to the people who reside in this township, as well as possibly detracting from the desirability of our property.

Radioactive waste does not belong in a residential area such as Wayne. I urge you to assist our community in facilitating the removal of thorium from this site.

Thanking you in advance for your interest and cooperation in expediting this matter.

Sincerely,

EDB

John D. Kinneman, Chief
Nuclear Materials Section A
Nuclear Regulatory Commission
631 Park Avenue
King of Prussia, PA 19406

Docket No. 40-00086

Dear Mr. Kinneman:

Thank you for a copy of "Radiological Surveys of Sheffield Brook, Final Report". I reviewed the report for the Town of Wayne and asked that they send you a copy of that review.

In looking over your report I noticed two references which would be useful to me and would greatly appreciate it if you could send me a copy. They are references 4 and 5 on page 54:

4. Nuclear Regulatory Commission, Guidelines for Decontamination of Facilities and Equipment Prior to Release for Unrestricted Use of Termination of Licenses for By-Product, Source, or Special Nuclear Material, November, 1970.

5. Nuclear Regulatory Commission, Branch Technical Position, Disposal or On-Site Storage of Thorium or Uranium Wastes from Past Operations, Docket 81-30808, Federal Register, Oct. 23, 1981.

This is being done on behalf of the Town of Wayne. If there are any charges over \$25, please let me know in advance. Thank you for your help.

cc: A. Bartolozzi

If appropriate, estimates of possible systematic errors are reported in parentheses.

200-9201

Dear Mr. President,

I am resident of Wayne, New Jersey, and I'm writing to you concerning a problem. In this township which the public has just been made aware of recently.

Between 1947 and 1974, industries located along Black Oak Ridge Road in Wayne, buried approximately 20,000 pounds of radioactive thorium. This thorium, once concedered safely buried, has now become caused concern. Radiation has been detected in this area by the nuclear regulatory commission in amounts of 10 to 25 times higher than normal levels. Furthermore, thorium has also been detected along the banks of Sheffield brook which runs along Dearfield road, a residential area.

As a parent (homeowner/resident) of Wayne New Jersey, I am extremely concerned about this situation. The thorium which is buried here poses a potential health hazard to the people who reside in this township, as well as possibly detracting from the desirability of our property.

Information in this record was deleted in accordance with the Freedom of Information Act, exemptions 6

U.S. Attorney General
Federal U.S. Post Office
Newark, N.J.

Att: Mr. W. Hurt Dumont

Dear Mr. Dumont,

The residents of Wayne, New Jersey, have great concerns relating to the property at 868 Black Oak Ridge Road. (Owned by W.R. Grace and Company) We have recently been made aware of a radioactive dump site on this property, material buried has migrated off the site. At the present time Electro-Nucleonics, Inc. is leasing the property. An investigation to determine exactly the nature of the work Electro-Nucleonics is engaged in is definitely indicated. It is also important to determine the parent company of Electro-Nucleonics, assuring us that the company has absolutely no connection with W.R. Grace either in the past or at the present time.

We would appreciate any other information you can provide. The residents of this community must be assured that the site will never be used as a radioactive dumping facility now or in the future.

Thanking you in advance for your assistance in this most serious matter. The citizens of Wayne anxiously await your response.

Sincerely,

Karen Lieberman
Concerned Citizens Committee

Dear

Subject: Testing of Well Water

This is in response to your telephone conversation with Mr. Karl Abraham of this office during the week of May 17, 1982. As Mr. Abraham informed you, the analyses of well water in the Wayne, New Jersey area conducted to date have been within standards for drinking water set by the U. S. Environmental Protection Agency. However, we will be pleased to analyze a sample from your well. Our contractor will be in Wayne during the month of July to perform additional measurements on the W. R. Grace and Company property. We will contact you to obtain a sample at that time.

If you have additional questions, please call me at (215) 337-5252.

Sincerely,

John D. Kinneman, Chief, Materials Radiological Protection Section

Dear Dr. Glenn:

Enclosed is a copy of the soil analysis of samples taken from three (3) residences close to the old W. R. Grace railroad siding in Pompton Plains, New Jersey.

Although all samples indicated levels below New York State limits, note that samples No. 15 and 16 were the highest levels obtained. Interestingly, these samples were from the rear yard of the [redacted] residence which is adjacent to the old railroad siding.

EX 6

Please let me know if you think this requires additional investigation or if you wish me to proceed further with soil sampling.

Very truly yours,

Carl J. Collica, M.S., DABR

December 16, 1974

I, Peter J. Garino, make the following statement concerning one facet of my activities as health physicist for W. R. Grace & Co., Wayne, N. J., during the 1960-1966 period.

It was brought to my attention during 1964 that the Atomic Energy Commission (AEC) was issuing a point of non-compliance to the Grace facility located at 868 Black Oak Ridge Road, Wayne, N. J., for making a burial of radioactive waste somewhat irregularly. Specifically, the waste was buried in too large a trench. Accordingly, after citing, I recall reburial in accord with the exact requirement. This was carried out by an independent contractor known as John J. Baum, Inc. The work was done by Mr. N. Baum and was supervised directly by Mr. Ernest Fullard under my supervision.

I wrote a draft of a letter that was used later in explaining to the AEC our intention of making future burials in the specified manner.
