Subject: Duke Energy Corporation
Catawba Nuclear Stations, Unit 2
Docket No. 50-414
Cathodic Protection System
Special Report, Revision 1

This Special Report is being issued as a revision to the 6/28/00 Special Report. As described in the original Special Report, Minor Modification # CE-10648 was planned to provide the replacement of Anode Wells 8 and 9, along with Test Stations 37, 38, and 39. The 6/28/00 Special Report included a commitment to install the wells via this modification by 8/18/00.

During the planning of this modification, it was determined that due to the proximity of the Unit 2 Diesel Fuel tanks and piping to the area of well drilling, precise surveying of the underground piping would be necessary to minimize the risk to equipment. Due to the additional time required for the surveying, the original committed date will not be met. Additionally, it has been determined that these wells will not be drilled near an "Operable" or running diesel generator. Therefore, based on these scheduling considerations, this modification is slated for completion no later than 10/22/00.

One commitment is contained in this document: The commitment to complete installation of modification CE-10648 no later than 10/22/00. This commitment will be tracked via PIP C-00-02799. Any questions concerning this report may be directed to Tony Jackson at 803-831-3742.

Sincerely,

Gary R. Peterson
