**RE: Mine Permit No. 478, Frequency Change for Monitor and Trend Well Sampling for Christensen Ranch Mine Unit 6**

Dear Mr. Mooney:

Please be advised that all mining activity in Mine Unit 6 at the Christensen Ranch has ceased and we are initiating the ground water sweep phase of restoration. Because of waste water management limitations, the ground water sweep phase in Mine Unit 6 is commencing at approximately 40 gallons per minute and will be progressively increased as waste water management allows. With the commencement of restoration in Mine Unit 6, the frequency of monitor and trend well sampling will be changed from once every two weeks (biweekly) to once every month.

Please feel free to contact me if you have any questions concerning this matter.

Sincerely,

Craig W. Toal  
Environmental Specialist
