OPERATING LICENSE

The U. S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 70 to Facility Operating License No. DPR-50, issued to Metropolitan Edison Company, Jersey Central Power and Light Company, and Pennsylvania Electric Company (the Licensees), which revised Technical Specifications for operation of the Three Mile Island Nuclear Station, Unit No. 1 (the facility) located in Dauphin County, Pennsylvania. The amendment is effective 90 days from the date of issuance.

The amendment revises the Technical Specifications for the facility resulting from review and modifications to the onsite emergency power systems associated with furnishing power to the safety related equipment at the facility. These Technical Specifications establish setpoints and require surveillance and testing to assure that the undervoltage relays are operable to adequately protect the safety related electrical equipment from loss capability as a result of sustained degraded voltage from offsite electrical grid system and during transfer from offsite to onsite power source.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations in 10 CFR Chapter I, which are set

-2-

forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR §51.5(d)(4) an environmental impact statement, or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.
