Re: Draft Report: Generic Aging Lessons Learned
Nuclear Power Plant Relicensing Procedures

Hello. I have long been active in issues relating to nuclear power plants. I am absolutely appalled that the NRC would consider giving "one size fits all" licensing approvals to old nuclear power plants. The terrible danger of a meltdown or any kind of accidental release is frighteningly real. These machines need to be SHUT DOWN and decommissioned, and replaced with non-polluting forms of energy like solar, wind power and any number of other alternatives. It will be CRIMINAL to approve this licensing policy and the NRC will NEVER let it down. Please do not even think of going ahead with these procedures.

Sincerely,

Scott Jeffrey Powell
San Francisco, CA
