Comments: Stop the extension of the licensing of the aging nuclear power plants in the U.S. This technology has been proven dangerous and toxic without question. Surely you haven't forgotten Chernobyl. It is time to get out of the nuclear industry's pocket and shut these inefficient plants down and make the utilities and the nuclear industry pay for their decommissioning not unwitting tax payers.

This is the 21st century. Nuclear power will be viewed by the future generations as one of the major blunders of our time. It is them who will have to live with the toxic mess for the next several thousand years. Meanwhile renewable energy is available and harmless and even costs less. Do the right thing for your children and grandchildren and great great great.....Stop the production of electricity of via nuclear power.
