**Subject:** Comments on NRC Operator Licensing

Below is the result of your feedback form. It was submitted by David Corson-Knowles (david.corson-knowles@yale.edu) on Tuesday, October 10, 2000 at 20:39:13

Affiliation: Yale University Student,

Comments: I heard with horror that the NRC might allow a 20 year extension on nuclear reactor operations, instead of decommissioning them. This poses a serious threat to public health and safety. Not only does the risk of failure increase with reactor age, but the amount of waste (extremely toxic waste that we still do not know how to deal with safely) generated by extending the life of these nuclear reactors would pose a serious threat to my health and create a serious economic hardship for both myself and my children. Please do not extend operating licenses for nuclear power plants.

Sincerely,  
David Corson-Knowles
