Subject: Reuse of radioactive soil!

To whom it may concern:

I have received an email copy of the article: RADIOACTIVE SOIL FROM NUCLEAR POWER PLANTS MAY BE SOLD TO HOMES AND FARM by Brian Hansen, dated Oct. 19,2000.

It is with great consternation that I read and ponder this proposed action by the NRC. Given that, I am submitting my grave concern about the reuse of "low level contaminated soil" in any manner what so ever. That applies, as well, to the reuse of "parts" of material used in the nuclear power plants themselves. Surely all possibilities are been scrutinized thoroughly before exposing ourselves and future generations to any harmful residues from the nuclear power industry. There is no dollar value that can be placed on lives nor on our earth! Although I am not a scientist, I am stating my objection to the proposed action by the NRC and ask that all plans be shared fully and accurately with the US population prior to any formal action so that we may be informed.

Thank you for considering this letter; I realize that we all share in the mutual goal of providing a safe and healthy world now and into the future.

Blessings, Elizabeth Gricus
