I am completely opposed to the release of contaminated soils into the unregulated commercial environment. I do not believe that there are safe levels of radiation, and that these soils would expose unsuspecting people to higher doses of radiation than they already receive. Please do not release these soils or put them to commercial use. This is a form of government deception, to slip them into the environment without our knowing it, and making us guinea pigs in a radiation experiment. You know very well that no one would agree with this if they were given the opportunity to vote on it. If you do not believe me, put it up to a vote in local or even national elections and see what happens.
