Subject: Proposed reuse of radioactive materials

Good God no! Aren't there enough time bombs around already without releasing more! People get sick enough without rationalizations like this to make profits at the cost of lives down the line. If a person was to unwittingly live near this radiation source for years and got sick he would look for causes. Think of the worry that learning he had been living over a waste dump unknowingly would cause.... even if it wasn't the actual cause of his sickness!

If you can't understand this, then think of it in terms of indiscriminate sexual encounters. Yes, it solves the immediate problem but what about one's future concerns and worries?. Use your heads for something besides hat-racks.
