Comments: Please do not allow the use of low level radiation soil in the environment. We have enough radiation exposure in the environment, we don't need any more exposure. No matter how safe you may think it is relative to other "background" radiation, this soil should be properly disposed of by the nuclear industry. I think cancer is more prevalent in today's society for a number of reasons, one of which is low level radiation from many sources. Keep extra radiation out of the public domain.
