Comments: Dear Sirs, I would like to ask you to not consider releasing any radioactive contaminated soil, no matter how low level the radiation. There is just no excuse or reason for even thinking of such an action. There is already too much background radiation without such added exposure. The health of the general public has already been compromised in too many ways without adding exposure to radioactive soil. If the populace were to know of your intent on this matter I am sure they would all tell you the same thing I have. Children, especially, are vulnerable to such exposure and should now be subjected to it. I personally can't imagine what you folks are thinking in even entertaining such an idea. If you can't be more concerned with the public good, maybe you should change jobs and work somewhere else so you're not so dangerous. Thanks, Clem Wilkes
