**Subject:** NO RADIOACTIVE WASTE RECYCLING!

Dear NRC representative:

I am writing in response to the outrageous possibility that radioactive soil will be "recycled" into areas that the general public are exposed to on a daily basis. This is reckless and dangerous in the extreme.

I am sick and tired of witnessing increasing rates of disease and cancers due to the thoughtless continued pollution of our precious environment. What about our children? Your children? I certainly would not like my five year old daughter to be playing in a playground filled with nuclear waste.

These soils must NOT be released or recycled in any way. They should be isolated from the public for our safety. It is time to step back and seriously evaluate these types of decisions that negatively impact our health. There are enough problems to deal with as it is - why add to the medical burden that currently exists?

Low-risk is not acceptable. The only safe option is NO risk.

Sincerely,  
Dayna Rittenberg
