Comments: Low level radiation exists naturally in the environment at levels that Mankind has evolved to withstand. There is no need to add to those amounts; there can be no guarantees that the levels introduced through this project will not exceed those that Mankind is naturally capable of surviving. Haven't we caused enough harm to our environment already because of systems that were designed to be safe, but weren't? If this project is indeed as safe as it is reported to be, then everyone who works for the NRC should carry a sample around with them for 20 years first before suggesting that it go into everyone's yard.

Martin Shirilla, age 46, Republican
