**Subject:** irradiated soil

To whom it may concern:

Please do not sell contaminated soil. I'm shocked that this would even be considered. I would be happy to put you in touch with a colleague of mine, she has a Doctorate in Bacterial Remediation and may have some suggestions for alternative methods. I understand that many harmful practices under the umbrella of nuclear energy were committed before we were aware of the negative potential, but the time has come to repair the damage we have wrought and employ safe, effective alternatives. If you feel that I am not fully informed on this matter, please feel free to correspond with me, I'd love to hear from you. Thank you and have a great day!
