Comments: The question has been raised for years on what to do with radioactive soils. I have been told that NRC has plans for allowing the soil to be used for public uses in all manners (agriculture, construction-development,etc). Well this is completely uncalled for. To set the matters in the right course nuclear energy production is a crude method of supplying energy needs. We live in such an advanced society that it is asinine that anyone would support nuclear energy. There are very few citizens who will support nuclear energy. And for good reason too, nuclear is dangerous and degrades the environment we all call our homes. I believe it is time to phase out nuclear but put our resources into solar energy. As long as the sun is shining we can have ample amounts of energy to serve our needs. 100% SOLAR ENERGY- and keep those trucks hauling nuclear waste off the roads. Thank you steve Agius- Unity Maine
